Turin tempter

Happy Honda

Super-swoopy styling exercise for the Turin Motor Show in this Honda 07 prepared by Pininfarina. It features Honda's V-6 Formula One engine, mounted behind the seats. The body is believed to be made of a combination Kevlar and carbon-fiber.

Franchise negotiations could begin by year-end

Hyundai set to go in U.S.

By Richard Johnson
Detroit Reporter

Hyundai Motor Corp., which leaped successfully into the Canadian auto market in 1984, has begun unofficial contacts with U. S. dealers, and could be negotiating franchise agreements in this country before the end of the year.

The South Korean auto maker is also preparing to open import sales offices in the U. S., according to John Wright, vice president of sales and marketing for Hyundai Auto Canada. Wright said the U. S. offices will probably be located in Detroit, Los Angeles and New Jersey.

While Hyundai's Pony and Stellar lines are pegged for a 1986-model-year introduction in the U. S., the precise date of their arrival has not been determined. However, Wright said his best "guess" is January, 1986, rather than the traditional early fall new-car intro period.

Meanwhile, the South Korean-built, rear-drive Pony subcompact continues to do brisk business north of the border. The company has now officially quadrupled its original sales projection of 5,000 units for 1984 — announced during public introduction last January.

Through September, calendar year sales were placed at 15,289. Sales for September were 2,901 units, eclipsing the previous one-month record of 2,739 set in August.

"It looks like we are going to beat our September level in October," said Wright. "In fact, I know we will. Sales are going up every month."

Hyundai, which has had to boost its 1984 sales projection several times this year is now forecasting sales of around 20,000 units for its first 12 months in the Canadian market.

While unexpected demand caused some supply problems early on, Wright said the South Korean factory producing Ponys added a second shift earlier this year. Customers ordering a vehicle from the plant in Ulson are waiting 3-4 weeks for delivery, he said.

"There are shortages in some colors and some models, but generally, in the last two or three months, supply has been good," he said.

Dealer numbers are also soaring. After beginning with a network of 50 retailers last winter, Hyundai Auto Canada now has 113 spread across the country and is aiming at a dealer body of 150 by next spring.

"We are ecstatic," said Wright. "This is more than we could have forecasted. It is the most successful launch ever in Canada. Naturally, we caught the upswing in the market, but it seemed to be the right car at the right time."

He also attributed the Pony's galloping first-year pace to an aggressive ad campaign, a "well-financed and very powerful" dealer group, a kindly press and the car's "value for the money."

Prices are kept low, in part, because the Pony is imported to Canada under a special tariff applicable to products from developing countries.

Pony sales have also benefitted from a voluntary quota system in Canada which restricts Japanese auto imports and has created demand at the low-price end of the passenger-car market. Currently, Japanese auto makers are held to 18 per-

Reagan reelection will prolong auto access to White House

By Helen Kahn
Washington Bureau Chief

News Analysis

WASHINGTON. — With the pollsters calling President Reagan's reelection virtually certain, this is a quick look at what this would mean to the auto industry. A revisit next week, when the breadth of Reagan's coattails is known, will explore what Congress may do to help or thwart the Reagan Administration.

Of importance is that with the President's reelection, the auto industry will continue to have access to the White House and to the regulatory agencies. While this has not always meant success, it will give the companies a shot at the action and it will be in sharp contrast with the Carter Administration which shunned Detroit.

If Mr. Reagan is reelected, the industry might continue to be better off than it was before 1980. (Table on Page 66.) Even the workers might be better off — even with fewer of them. (Table on Page 66.) The winner, however, may turn out to be the robot manufacturers and the computer chip makers.

The auto industry, never totally happy with any government, has a natural tilt toward business - oriented Republicans. The companies have welcomed tax relief and depreciation benefits and writeoffs, not to mention regulatory relief. Some have even profited from the extraordinary growth in defense spending.

Nonetheless, an informal phone survey failed to turn up a single company man who is not seriously worried about the Reagan deficits; nor one who believes for a minute that economic growth will handle the deficit; nor one who believes

breaking news

Chrysler to redeem $58 million in debentures

DETROIT.—Chrysler Corp. said it will redeem $58 million in 12-percent debentures outstanding on Dec. 20. The auto maker will redeem the debentures, due in 1991, for their $1,000 each face value, plus $56.33 in interest from last July 1. Chrysler sold $77 million of the debentures in May, 1980, to its dealers and suppliers to help qualify for federal loan guarantees. Chrysler already has repurchased $19 million of the debentures.

UAW organizes Greenfield Village

DEARBORN.—The UAW has been elected the bargaining representative for 126 workers at Greenfield Village by a 2 to 1 margin, according to Stephen P. Yokich, UAW vice president. The vote was 68 to 36. The bargaining unit includes skilled maintenance workers and some production employes including blacksmiths, candlemakers, glassblowers and so on. The cooks and bakers at the Eagle Tavern are also part of the unit.

But product for new U. S. dealer group is changed

Honda Acura net to start in 1985

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Acura, American Honda's second distribution channel in the U. S., will begin operations late next year selling the smaller Quintet line of vehicles rather than the executive-class sedan as originally planned, AUTOMOTIVE NEWS has learned.

The larger sedan, codenamed HX and using a design conceived jointly with BL, was scheduled to debut early in 1986. However, the V-6 powerplant to be used in the car is taking longer than expected for Honda to develop. As a result, the introduction has been pushed back to mid-1986 at the earliest.

Despite this setback, American Honda plans to go forward with the original timetable for the Acura franchises and will use the Quintet series to launch the channel late next year.

Quintet currently is being sold in Japan and Europe and is scheduled for a complete overhaul during 1985. In its current configuration, it is slightly smaller than the Accord, but larger than Civic.

• The new model range would include four-door hatchbacks and sedans and possibly a two-door coupe and would sell in the $8,000 to $10,000 range. The HX, on the other hand, is planned to sell in the $15,000 to $18,000 range.

This latest move suggests the Acura product line will be much broader than previously thought. Early information on Acura pointed to a franchise that would deal only in upmarket vehicles such as the HX and a mid-engine two-seat sports car.

The decision to start with Quintet, as well as Acura's franchise structuring, indicates, however, that Honda has much more in mind for the new channel. According to one source, Honda dealers who are granted Acura franchises may not operate them in the same territory as their existing store.

Such a setup would provide a competitive atmosphere for the consumer and would prevent a dealer from controlling a market if Acura and Honda dealers

It could wind up paying twice

Ruling against offsets could be costly to GM

By Jake Kelderman
Washington Reporter

WASHINGTON. — The decision by the U. S. Court of Appeals here forbidding the EPA from utilizing so-called offsets to compensate for failed emission-control systems on older cars may result in General Motors paying twice for an offense not altogether its own doing.

The matter involves approximately 700,000 cars built by GM for the 1979 model year which, for reasons unknown to GM and the EPA, fail to meet oxides of nitrogen emission standards in use.

Normally those cars would be recalled and repaired. That is not possible in this case, however, unless GM retards the spark substantially and thereby impairs driveability and lessens fuel economy by about 7 percent. Even then the fix would not bring all the cars into compliance.

That being the case, EPA and GM conceived of another option whereby the company would build some 2.3 million 1982-83 cars certified to an oxide of nitrogen standard one-tenth of a gram per mile below the 1.0-gpm NOx standard.

The end result, the two concluded, would be not only cleaner air but continued credibility for EPA's recall program. As one EPA official said at the time, "I don't think we would get many people to bring their cars in if we tell them that correcting the emissions problem will cost them driveability and fuel economy."

The Center for Auto Safety; Public Citizen, Inc.; Natural Resources Defense Council and others saw it somewhat differently, however, arguing that by allowing offsets, the EPA was opening a "Pandora's Box;" in effect giving auto makers an incentive to build less than the best emission-control system knowing that if it failed they might not need to fix it.

• A spokesman for the environmental groups noted that the situation was really nothing more than a gamble that GM lost. A slight loss in fuel economy and driveability is a comman occurrence in many recalls, he said.

"If it takes $100 to make the cars right, then that is what the company should be made to spend," he said.

The U. S. Court of Appeals chose not to address that issue, but took instead a strictly legal interpretation and ruled that the Clean Air Act simply allows for no other remedy but recall.

That being the case, EPA is now trying to decide what to do about those 700,000 polluting cars.

If it orders GM to recall the cars, it would be penalizing the company twice, because GM has already built the 2.3 million cars it needed to offset the excess air pollution from the failed cars.

Indeed, those cars have done even better than expected, averaging only 0.59 gpm NOx in-use, according to EPA's most recent survey of the vehicles.

Yet, under the court order, EPA apparently can do little else but order a recall. "We're in a real pickle on this one," EPA sources said, "but clearly we've got to come up with some kind of option to deal with those circumstances in which a realistic fix is not possible for an emissions-control problem."

That solution, as the appeals court itself said, will have to come from Congress. Indeed, in previous attempts to amend the Clean Air Act the notion of offsets has been raised and auto industry sources indicate it will be raised again until Congress accepts them.

A GM source said, "Let's face it, there are going to be some instances where no matter what our best engineering and intentions are, there will be some cars that do not meet the emissions standards. You simply cannot control everything."

Meanwhile, GM and the EPA continue in a "damned if you do, damned if you don't situation" with the 700,000 faulty cars. EPA is faced with ordering a recall for a fix that will not be adequate for all cars, thereby setting another precedent that might be challenged in court, and GM, having already paid the piper once, is looking at having to pay it again.

High hopes for Jetta

VWoA expects the all new, imported Jetta to top its U.S.-built hatchback cousin, now the Golf, for the first time this year. Classed as a five-seat compact, Jetta has a high deck lid to improve its aerodynamics, giving it a family resemblance to the new Audis.

As Golf replaces the Rabbit

VW 'over the hump,' Phillips says

By Matt DeLorenzo
Los Angeles Reporter

SANTA BARBARA, Calif. — Calling the Golf, Jetta and GTI the heart of the Volkswagen franchise, Noel Phillips, president of Volkswagen of America, said the introduction of the Rabbit replacement is a pivotal point in the company's history.

"Volkswagen is over the hump," Phillips said, noting that the company turned a profit in '83 and is looking at even better results for 1984. He addressed a news preview of the new models.

Phillips expects sales to reach 190,000 units for '84, up over the previous year's total of 170,000.

For 1985, he sees total U. S. sales dipping slightly to just over 10 million, down from his estimate of 10.5 million for this year.

Despite a smaller overall market, Phillips said "the market relevant to Volkswagen will not be less than '84" and he predicted the company would increase its market share.

VW has targeted sales at 275,000 for '85—100,000 each of the new Golf and Jetta series for the other models.

If VW is able to achieve those figures, it would move its industry share from 1.8 percent of the total market to 2.7 to 2.8 percent.

While sales of VW's imported product are up 42 percent this year, sales of the U.S.-built Rabbit had been declining. Phillips attributed the 9 percent decrease to the model buildout which saw Rabbit production cease in mid-June.

Phillips also called the new Golf "the springboard for the rest of the '80s" for Volkswagen and added that the company is also counting heavily on Jetta to help boost market penetration.

"The Jetta range will spearhead our thrust," Phillips said.

VW has also spent $200 million updating its Westmoreland (Pa.) assembly plant and Charleston (S. C.) stamping plant for the new Golf.

Phillips said Westmoreland will continue to produce cars on one shift and added that the company is leaving the door open to the possibility of building Jettas here, depending on demand.

He indicated that it would take 12 to 18 months to tool the plant for Jetta.

GTI, which is also produced in the U. S., is expected to account for about 25 percent of the Golf model mix, according to Jim Fuller, vice president of the Volkswagen Division.

That mix is down about 5 percentage points from previous levels, however, the decrease is attributed to a later production startup date than the standard Golf models.

The importance of Golf, Jetta and GTI to VW's future is underscored by the media blitz that will be unleashed during the last eight weeks of the year to introduce the new car.

According to Fuller, approximately 200 commercials will air on national television in prime time and on NFL and college football games. A massive print ad campaign has also been readied and Fuller said expenditures will be more than 20 percent higher than ever before.

The added emphasis on Jetta —Fuller said the 100,000 unit estimate is double current levels—and on VW's other imported product (Quantum, Scirocco and Cabriolet) has taken VW away from being a one-car-line company to a full-line maker.

VW will be adding further to its import range when it introduces a Quantum with all-wheel drive in the first quarter of 1985.

Volkswagen Golf is defended as logical successor

By Jake Kelderman
Washington Reporter

Volkswagen of America is launching its new Golf, the replacement for the 10-year-old Rabbit which paved the way for the legion of small econobox cars that now populate U. S.-highways.

Whether the new Golf will achieve the same success remains to be seen; but even before the car hit the streets, industry analysts criticized it as being "warmed over milk"—an evolutionary vehicle at a time when the market is demanding "new and exciting."

VWoA officials, aware of those

Continued on Page 67, Col. 1

Bigger than Rabbit

The most noticeable change in VWoA's new Golf is the rear end, but the car also is longer and wider than its predecessor, the Rabbit. It has a longer wheelbase, wider stance, larger trunk and seats five. Golf will be built in Pennsylvania.

Chrysler to stay with big cars –but where?

Chrysler Corp. has decided to continue production of its rear-drive big cars indefinitely, but still is undecided about where they will be produced, Chrysler Vice Chairman Gerald Greenwald said in an interview with AUTOMOTIVE NEWS.

"Sales just keep going up," Greenwald said of the cars, among the oldest in the corporate lineup. Previously, the M-body production was moved from Windsor, Ont., to St. Louis to make room for minivan production in Windsor.

Greenwald said Chrysler is happy with the quality and production it is getting in St. Louis and would like to keep the cars there.

However, the big-car assembly conflicts with current plans to begin additional minivan assembly in St. Louis in 1986.

"We're trying to resolve that," Greenwald said.

Cut in wholesale prices possible, Nissan says

By John Hartley
Staff Correspondent

TOKYO. — Embarrassed by the continuing low value of the yen against the dollar, Nissan is reviewing the price paid by its U. S. subsidiary to the parent company.

Transfer-pricing of cars and components between companies and their subsidiaries has long been a controversial subject, since it is possible for a company to manipulate prices so that profits are channeled back to the home country.

Nissan and Toyota have flatly denied allegations in the U. S. that they have adopted high transfer prices to subsidiaries.

Now, however, Takashi Ishihara, Nissan president, has admitted that prices of U. S.-bound cars may be reduced. He said that this would enable the sales subsidiary to benefit from any exchange profit, but he said that it will not lead to a markdown in sticker prices.

The statement did not imply that Nissan accepted the charges of high pricing, but merely that it had been caught out by the low value of the yen.

Suzuki's Samurai Super Long-Body is one of five new models for the Canadian market, featuring a larger, 1.3-liter, engine and new five-speed transmission. Instrument panel, seats, graphics and front end have been redesigned for '85.

'84 total up 81 pct. for 23 makes

Dealers spend heavily for spot TV

By Joseph Bohn
Marketing Editor

Factory auto advertising may be up only modestly for this year, but dealer association spending has really taken off.

A tally of spending by dealer associations representing 23 different makes in spot TV, their largest media category, shows spending up 81.3 percent over last year for the first six months of 1984.

Associations for American Motors through Volvo spent $124.5 million during the first six months of 1984, up from $68.7 million in like 1983, according to Broadcast Advertiser's Reports data from the Television Advertising Bureau.

The figures include any makes whose associations spent in excess of $1 million for the period.

Generally, most of the domestic auto division marketing executives have been touting the extra funds they're putting into local market support programs, aimed at encouraging more advertising by dealer groups.

• And some divisions, like GMC, have been organizing more groups for additional marketing clout.

The figures bear out those activities.

GMC associations, for example, recorded a fourfold increase from $561,700 last year to $2,622,400 in 1984.

Mercury association spending jumped to $3,371,200 from $801,400, and Chevrolet association spending jumped to $14,437,500 from $6,830,600.

Every domestic line except Chrysler scored a sizeable increase. The Chrysler nameplate dropped to $1,238,500 from $1,760,700 in 1983.

Import dealer groups were similarly spending far in excess of what might be attributed to a stronger market.

Associations for Isuzu, for example, kicked up spending to $1,144,200 from $257,900 in like 1983.

Nissan groups boosted spending to $12,986,200 from $6,603,800. And Volkswagen groups scored a heavy increase to $3,482,400 from $962,400 in 1983.

$135 settlements made to buyers of 1980 Toyotas

BALTIMORE. — Toyota buyers in Maryland, Virginia, Delaware and the District of Columbia are now receiving checks of $135 each as part of the settlement of the price-fixing suits against Mid-Atlantic Toyota Distributors, Inc., and Toyota dealers who sold rustproofing and undercoating at fixed prices and without choice to buyers.

This is all part of a series of cases involving some 34,000 customers in Delaware and Pennsylvania (Automotive News, Oct. 29), 10,000 in Maryland, and 9,600 in Virginia and 900 in Washington.

In Delaware, Maryland, Virginia and Washington, Toyota buyers may cash their checks of $135 at Toyota dealerships. Or, they may choose instead to buy $250 in goods or services, including tuneups and some parts. Consumers must redeem their checks at the dealership where they bought their car, if it is still in business.

As in Pennsylvania, Mid-Atlantic will pay $80 of each settlement; the rest is to be paid by dealers.

The multi-district litigation was finalized by a federal judge here.

Ford's on top

How long will it last?

How long can Ford Motor Co. hang on to its newly won lead in European car sales?

Through the first eight months of 1984 Ford crept ahead of Fiat Auto S.p.A.—which led for most of the year—mainly on the strength of its August performance in the United Kingdom. Ford is a comfortable market leader in the UK, and August is a traditionally high-demand month there.

The difference between the two top contenders after eight months was just over 12,000 units in a total European market of more than 7 million. By unofficial estimates, Ford's share was 13.1 percent, Fiat's 12.9 percent.

The other leading four European majors were VW-Audi Group (11.6), General Motors (11.3), Peugeot Group (11.2) and Renault (10.8).

Even Ford officials, however, quietly acknowledge the confident claim of Fiat's Vittorio

The 1-liter Fire 1000 heads into production late this year, and will show up in the new Lancia Y10 which debuts in February.

Fiat ignites a Fire

First of a new generation of engines

By Richard Feast
European Editor

When Fiat Auto S.p.A. laid out the concept of the new 1-liter engine known as Fire 1000, it did so on hotel tables around Turin. Fiat workers were on strike and the company's offices were closed. Moreover, the Italian auto company was weak and vulnerable at a time when the second post-oil crisis sales recession was setting in. That was the fall of 1980.

Fiat's recovered from those dark days by cutting fixed costs, automating plants and launching new products. It also worked to develop a new range of engines of which Fire is the first.

While car designs change relatively rapidly, new engines are a comparative novelty. One thinks in Europe of GM's Family 1 and 2 engine designs, and Ford's CVH. But for an all-new contender in the 1-liter segment, it is necessary to look back several decades.

What emerges in the Fire 1000 is a modern single-overhead camshaft, four-cylinder design that is conventional in all ways except one. Its production is very highly automated. Machining and crankshaft installation, and location of bearing shells and lubrication, are automatic. So are insertion of cylinder liners, and assembly and location of the cylinder head. What's more, exhaust manifold and carburetor are attached free of human hands.

Only half of the 2,000 workers at the Termoli factory in central Italy are now employed on Fire lines. But when the engine is in full production—Fiat will not say when this will be—a new engine will be turned out every 20 seconds. That will be 2,500 daily, or more than half a million annually.

Fiat invested $335 million in the Fire. It is part of a broadly based annual expenditure by the Fiat automobile division of about $1.25 billion on new models, engines and facilities.

Fiat will put the engine into production toward the end of this year. Its first appearance will be in a new model from Lancia currently known as Y10 which will be introduced in February. Y10 is a baby-car addition to the Lancia line, and will not replace the equally small Autobianchi A112 that will continue in production for a considerable time after Y10 reaches the market.

Later, Fire will go into Fiat products which currently use the old 903-cc four-cylinder powerplant — the Uno and Panda. While Fire has a capacity of 1-liter and produces 45-HP, Dr. Paulo Scolari, Fiat technical director, says it could be produced in 800-cc or 1.1-liter form.

He says Fire was designed as a modular engine, and a three-cylinder version could be possible. Certainly turbocharged and diesel variations of the four-cylinder unit are well along. A sporty version will produce up to 80-HP while the turbo versions will top that.

Another Fiat source reveals that what Fire does for the 1-liter category, a new generation of 1.5-liter engines will do for Fiat in that category "fairly soon." A 2-liter is also a possibility.

Other key points in Fiat's engine-technology plans include fewer components, lower weight, less maintenance and better mileage.

Fire has 30 percent fewer components than the Fiat 127's 1,050-cc unit (273 parts versus 368). It also is more compact and, at 152 pounds, very light.

Fewer components, lower weight, less maintenance, better mileage.

The low weight is all the more surprising since Fiat retained cast iron for the cylinder block rather than using aluminum as some rivals are. The block weighs less than 40 pounds compared with 73 pounds for the overhead camshaft 1,050-cc unit.

Fire's cylinder head is aluminum, but cast iron is used in most other areas including connecting rods, camshaft, flywheel, bearings, valve guides and piston rings. At 13 pounds, the crankshaft is about 25 percent lighter than a 903's.

Fiat studied Heron, semi-Heron, bathtub, single and double ignition, and May principles for the Fire combustion chamber. It chose the bathtub type, quite unlike Porsche System's design for the new Seat engine.

While fuel consumption figures are not available — the Y10 in which it will bow has not yet appeared — Fiat says Fire 1000 will be 15 percent lower than current equivalent Fiat engines. □

Welcome to the real world

Spain's Seat plans string of new products

By Richard Feast
European Editor

Spain's state-owned auto maker, Seat, is entering the real world after years of isolation as a domestic manufacturer of other companies' designs.

Seat plans a string of new products, is exporting vehicles to western Europe in its own right, and is reducing manning levels and embarking on a massive course of automation. Significantly, Seat has established links with major European automaker Volkswagen AG, after painful separation proceedings instigated by Italy's Fiat Auto S.p.A. in 1980.

Seat commercial director Juan Jose Diaz Ruiz spoke enthusiastically during last month's Paris auto show where the first of the new generation Seats made its public debut. "Given the current model mix, we could break even at 280,000 cars. That could be next year, when we have introduced our commercial and industrial restructuring plans," Diaz Ruiz said. The possibility of Seat making a profit after years of losses would be one of the major, and least known, turnarounds in the world auto business.

Financial losses in Spain were the main reason why Fiat abandoned Seat, which further worsened Seat's prospects. The arrival in Spain of General Motors added to the country's domestic market competition as car demand throughout Europe dropped in the early 1980s.

The prospect of Spain entering the European Economic Community, and the beginning of a breakdown of tariffs and quotas which have kept out imports, called for drastic action at Seat.

The company went on the offensive. First, it made its two best sellers more distinctly Seats; the 127, originally designed by Fiat, became the Fura, and Ritmo became the Ronda. Seat even won a Chamber of Commerce legal battle, instituted by Fiat, which claimed copyright infringement.

Then Seat began a serious export drive into the rest of Europe. It cleared out most of its other Fiat designs, though it continued to manufacture Panda models for the Fiat network, and will do so until next year.

Seat's aim was 1.5 percent of the western European market outside Spain, or about 150,000 cars. Starting from base zero, it meant establishing dealer networks in various nations and essentially selling Fura and Ronda models in the early stages. Results in France and Italy have been particularly good.

Not until next year, with greater availability of the new generation Ibiza model, can Fiat reach its sales targets. For 1986, the company talks of consolidation and general strengthening of its achievements.

Ibiza forms part of the longer-term strategy. Lacking its own internal resources, Seat turned to Giugiaro (Ital Design, Italy) for its styling, Porsche System (West Germany) for its engine and transmission, and Karmann (West Germany) for body engineering. The result, says Diaz Ruiz, is a car with Latin styling flair, and the performance and engineering excellence of a German product. It will be priced a bit above Fiat Uno/Peugeot 205 and a little below Ford Escort/Austin Rover Maestro. Ibiza, maintains Diaz Ruiz, has the interior space of a C-segment car and the exterior dimensions of a B-segment.

During the next few months Seat will broaden the Ibiza's appeal. This will include a sporty version with 100-HP and Bosch electronic ignition by next June, and by the end of 1985 a five-door version. In early 1986 a three-box sedan derivative will follow.

Next March's Geneva auto show will display the first of another series of Seats — the Malaga, a C/D-segment model about 170 inches long which will compete with Ford Sierra and Opel Ascona.

In 1986, when Seat's Panda commitments to Fiat are completed, the Spanish company will introduce its own derivative of the lower-segment model, to be known as Marbella.

The names Malaga and Marbella, incidentally, are widely known in Europe as Spanish holiday resorts.

While its products have been launched in most European countries, Seat has yet to expand into the UK, Scandinavia and Switzerland. These countries will be added by the end of 1985.

A further, and not entirely clear, dimension concerns Seat's relationship with Volkswagen of West Germany. At present the link is entirely commercial. VW has no stake in Seat and there are no joint companies. But Seat assembles the Polo model sold by VW networks across Europe except West Germany. Seat also distributes VW and Audi products along with its own in Spain, and assembles Santanas for the Spanish market.

For VW, Seat is an entry into a market which had been closed to it, apart from a handful of sales which to the volume producer are of little significance.

What has not been explained is where the German-Spanish connection will lead. VW chairman Carl Hahn is evasive about his company's long-term plans in Spain, though it is certain Seat would like to produce the next generation Polo model in its entirety. If it did, Seat would be following a well-trodden path: GM Opel's small Corsa and Ford's small Fiesta are produced in Spain for sale in Europe.

Seat expects to build 310,000 cars this year, including only 22,000 Ibizas. By the end of December it will be producing at a daily rate of 450, half the number planned for a year later. In 1983, total production was 250,000.

In 1985 Seat plans to produce 400,000 compared with its theoretical capacity of 420,000. These increases are accompanied by a steady reduction in labor force. Seat began 1984 with 25,000 workers and expects to be below 22,000 by the end of the year. Cutbacks will continue until 1990 when a planned level of 19,500 is reached.

A management casualty this year was chairman Juan Miguel Antonanzas, who unexpectedly resigned and was replaced by former commercial director Juan Antonio Diaz Alvarez.

In productivity terms, Seat's employe reduction means boosting output from 9.5 cars per worker in 1981 to 16 this year and 24 in 1988. This will be accompanied by a massive automation program, Diaz Ruiz says. □

PSA puzzle

Where's the Fire?

The Fire 1000 engine was conceived as a joint project between Fiat Auto S.p.A. and France's Peugeot Group (PSA). Fiat now has declared its hand, but what about PSA?

The two collaborated on the design, and while Fiat has a car ready to equip with the new engine, PSA does not, and the absence of any clear PSA plan has led to speculation that it has withdrawn from the project.

PSA denies this, maintaining it will produce the engine when it needs to. Without any specific information, the belief is it will go into the new Citroen ZA expected to arrive some time in 1986.

The ZA is believed to incorporate a lot of thinking from the Eco 2000 experimental car shown at last month's Paris auto show. That had an 800-cc, three-cylinder engine, a derivative which is apparently feasible from the Fire design.

Whether PSA will be ready by 1986 to manufacture its version of the Fire is unclear. As a short-term measure it may have to buy some units from Fiat until its own production facilities are ready.

What is certain is that the original plan to have one huge factory producing a million engines a year has been abandoned. The debate centered on where the factory should be. Neither side, lobbied hard by its own employes, wanted it to be in the other's country.

Now it seems there will be two factories, each making half a million annually. Fiat's is at Termoli in central Italy. There is no indication where or when PSA's will move into action. □

—*Richard Feast*

Sales

Continued from Page 37

Ghidella: "There is no way we can be beaten in 1984," declares the head of the company's automobile division. He is probably right. Fiat is aided by two factors: Continuing strong demand in Italy where it dominates the market; and slacker consumer buying in the countries of its main rivals. After eight months, car buying in five of Europe's six largest national markets was down this year, including West Germany, UK, France, Spain and the Netherlands. The other 10 markets, accounting for 16 percent of the European total, rose slightly, but not enough to offset declines elsewhere.

The very feeble market in France—down nearly 14 percent —and the smaller UK downturn made the UK the second most important national market after West Germany. Second place is normally held by France.

The French situation contributed to Renault's problems. While the market was contracting, Renault's share shrank with it as a result of a trend away from its R5 and R18 models and toward Peugeot 205 and imports. □

GMAC settles suit charging bias in loans to Indians

By Jake Kelderman
Washington Reporter

WASHINGTON. — A consent agreement has been finalized in which General Motors agreed to not discriminate against American Indians when making auto loans.

The consent order was signed in U. S. District Court in Albuquerque and stems from a suit brought by the Department of Justice. GM admitted to no wrongdoing in the agreement.

The Department of Justice had accused GMAC of refusing to purchase installment loan contracts negotiated with American Indians on the same terms and conditions as those of other buyers. It also accused GMAC of offering them less favorable terms on the loans it did approve.

The Federal Bureau of Investigations and the Justice Department's Civil Rights Division had been investigating the finance company's operations in Arizona and New Mexico. Under the consent decree, the Justice Department will review loan application files provided by GMAC not only from those states but from Montana, North and South Dakota and the state of Washington to determine if any discriminatory activity took place. If Justice determines it has, GMAC will invite those affected to reapply for credit or to refinance their loans within one year.

A spokesman for GMAC said, "GMAC confirms that it has entered into a consent decree with Justice concerning certain procedures relating to the Equal Opportunity Credit) Act, but GMAC denies that its credit granting policies and procedures have discriminated against American Indians. Such discrimination would be totally inconsistent with GMAC's primary business objectives of facilitating the sale of GM products by purchasing every finance contract that has a reasonable chance of paying out."

"It is a matter of public record that GMAC was an early supporter in the U. S. Congress of enactment of the EOCA and the principles it promotes," he said.

"We agreed to the consent decree to avoid costly and protracted litigation which would divert resources from the pursuit of GMAC business objectives," Andrews said, adding that GMAC is confident the review of its files will demonstrate full compliance with the law.

Anglo American to sell Hewlett-Packard fleet

NASHVILLE.—Anglo American Auto Auctions announced that Hewlett-Packard's entire corporate fleet is being sold through Anglo-American locations in October and November.

Phase I of the sale began in October and offered '81, '82 and '83 General Motors, Ford Motor and Chrysler Corp. cars. Phase II begins in November and will offer '84 Ford and Lincoln-Mercury cars.

Insurance group urges DOT to write truck-braking rule

WASHINGTON.—The Department of Transportation (DOT) is once again being urged to write a truck-braking standard, but this time it should be based on newly developed load-sensing equipment and anti-lock brake systems, according to the Insurance Institute for Highway Safety (IIHS).

In 1978, PACCAR, Inc., successfully challenged NHTSA's truck-braking standard on the grounds that it was unworkable, partially due to the unreliability of anti-lock systems then available.

Since that time, trucks have been governed by a single federal stopping distance rule that requires trucks, depending on their configuration, to stop from 20 MPH in 35 to 40 feet on a dry road. Passenger cars, in contrast, are required to stop from 60 MPH in 216 feet on a dry road.

IIHS said a loaded tractor trailer can take 250 to 300 feet to stop from 60 MPH, but an unloaded truck or a tractor without its trailer can take up to 500 feet to stop from a speed of 60 MPH.

IIHS reasons that the disparity between car and truck stopping distances greatly increases the likelihood of accidents if a car is forced to make a sudden stop when followed by a truck.

Compounding the problem is an IIHS statistic that claims car occupants are 30 times more likely than truck occupants to die in a car-truck collision.

According to a report presented to the American Assn. for Automotive Medicine last month by Ian S. Jones, of IIHS, the poor braking performance of trucks is often due to the absence of brakes on front axles, poor brake adjustment and slow brake-activation times.

Jones also found that trucks were more likely to be involved in single-vehicle loss-of-control-type accidents than were passenger vehicles. These accidents would include instances of jackknifing and trailer-swing which might be brought under control with better truck braking and stability, Jones said.

The study suggested that DOT adopt the European approach to truck braking requirements, which has been to require improved stopping distances with braking on the front wheels of the tractor and slack adjusters, and then to gradually move to tighter stopping distances with anti-lock braking systems.

The use of load-sensing devices and the installation of retarders — devices fitted to the engine or driveshaft to provide added deceleration on long downgrades—were also suggested.

Jones stressed the tandem capabilities and adjustment ease of disk brakes on newer trucks, but claimed hydraulic brake vehicles could be made much safer through an anti-wheel-lock retrofit system applied to the tractor, in combination with slack adjusters and load sensing equipment fitted to the trailer.

He said the feasibility of such a combination has been proven through its use in Europe, and that the reliability of these systems has been greatly improved over those used domestically in the mid-1970s.

Golden Shovel Award

SCOTTSVILLE, Ky. — Ford Motor Co. has given Harper Ford here the Golden Shovel Award for modernization of the dealership.

Deal for Rehrauer

Robert W. Rehrauer signs a Pontiac franchise as Peter F. Carroll, left, zone manager, looks on. Rehrauer will take over Two Rivers Auto Service Co., Two Rivers, Wis., as his brother retires from the position.

With Reagan's reelection

Auto industry access to White House to stay

Continued from Page 1

that Mr. Reagan would not have to raise taxes.

But at least they could — and expect to — advise on taxes. They hope to be able to preserve access to capital at reasonable rates and to keep interest low enough to continue strong car sales. In general, they do not like Value Added Tax and prefer a modified flat tax — apparently the way the Administration will go.

Profits and prosperity now gild the companies and help offset severe dislocations caused during the last decade by the rise in oil prices and competition from small and fuel-efficient imports already onstream during the great downsizing exercise.

What happened during those two oil "shocks" has permanently changed the structure of the domestic industry. The change has been from a monolithic and predictable industry to one split between Chrysler Corp., Ford Motor Co. and American Motors vs. General Motors, which has adopted an Asian strategy.

MVMA, once the spokesman on most matters, now also includes Volvo of America and Volkswagen of America but does not include Nissan Motor Mfg. Corp., U.S.A., nor American Honda.

The import makeup has changed — growing as the Japanese companies import both for domestics and on their own. It now includes the Koreans and some Iron Curtain countries.

But a major difference is that the imports lack access, certainly to the White House and have only limited access to the Department of Transportation except through the legal processes.

During the Carter Administration, importers were welcomed as the "can-do" boys, offering competition to a mature and sluggish domestic industry.

With this said, it would be comfortable — but misleading — to assume the crunch is over. Sales are up, the industry is becoming competitive, and all signs are go. But recently, there have been hints that the energy supply and prices may be on the move again.

• If the climate again becomes unstable — while customers want those bigger and loaded cars, conceivably the domestic industry could be whipsawed again.

The central problem for the auto industry — far more important than regulation for example — are the trade-related issues — a direct fallout of the energy crunch which allowed the surge of imports. But here, the Reagan Administration outlook is cloudy — just as the companies are split in their viewpoints.

The Reagan Administration—billed as free trade—seems to be mixed; in fact, it has practiced some sleight-of-hand protectionism in spots.

Chrysler, Ford and AMC stand apart from GM and from their foreign brothers. But they also are separate from their natural brethren — the National Assn. of Manufacturers, the U. S. Chamber of Commerce and even their dealer associations.

They also differ from the import companies and their parent manufacturers including their own Japanese partners to whom they are joined in equity or common ventures, even though not in true and eternal love.

Chrysler has been the leader in fighting the Japanese—while bringing in its products profitably. Ford also wants an extension of the Japanese "voluntary" restraint agreement and has joined the UAW in asking the White House to continue Japanese quotas. AMC joins, almost silently, while selling its French bride's dowry.

The situation is different for GM, with its serious plans to import Suzukis, Isuzus and even Korean cars. After the election, GM itself may take its case to the White House and even get around to asking NHTSA if it can count the Toyota-made joint venture cars as part of its CAFE.

• Further, while the others complain much about the dollar/yen "imbalance" — and GM recognizes it — GM can use it to save money by outsourcing abroad.

The White House clearly does not want to address the VRA issue before the election and in fact, may prefer to keep the lid on until at least January and perhaps later — perhaps until the profit picture of the Japanese companies becomes clear. No decision is in the works.

The quotas are tied to other areas, such as the dollar/yen relationship — that "level" playing field.

Here, the Reagan Administration treads lightly, perhaps because high-quality imports have improved domestic products and perhaps even helped hold up car prices and company profits, or perhaps because in areas other than cars imports have helped hold down inflation.

But while trade policy is cloudy at the White House, the Administration is clear on its opposition to the UAW-backed domestic-content legislation, which is also cheered by Chrysler, backed as a "last resort" by Ford, quietly assented to by AMC and opposed by GM and the import companies. So far, it has not moved through Congress but its fate will be determined not by the President's reelection but by the makeup of Congress.

Particular mention should be made about the effect on the auto industry of the Administration's interpretation of the antitrust laws.

• GM has been the chief beneficiary. The willingness of the FTC to allow the GM-Toyota joint venture has enabled GM to change its corporate structure radically and gird for the future as it sees it.

In the area of regulation, "reform" would likely continue apace if the President is reelected. But the pattern of successful legal challenges by consumer advocates and insurance companies is also likely to continue.

This has led NHTSA to proceed cautiously and certainly slowly. Its regulatory calendar reads like everything the auto industry ever wanted, but the schedule is To Be Determined.

Meanwhile, NHTSA continues defect investigations. NHTSA also plans to continue efforts to rate makes and models for occupant protection in line with a 1972 statutory mandate, despite industry uneasiness.

At EPA — where the law itself contains instructions and deadlines — regulation is still in the works. This includes such things as gray-market cars, heavy-duty vehicles, emissions, use of methanol, the CAFE adjustment factor and changes in test procedures. And again, consumer activists are successful challengers.

But the real action for the auto makers will be in Congress where the Clean Air Act has not been reauthorized — or changed — since 1977.

But the new EPA — freed from the controversial Ann Gorsuch Burford — has been revived under the old Mr. Clean, William D. Ruckelshaus.

However, Ruckelshaus is expected to leave very shortly after the election and no one knows who the replacement will be.

Having once politicized the EPA, raising a storm of criticism, the President would be likely to accept the fact that environmental issues have both Republican and Democratic widespread support.

Besides, the battle is not really over car and truck emission control — but over toxic waste dumps, acid rain and water pollution.

Grand Flagship sets sail

Moloney Coachbuilders, Schaumburg, Ill., has introduced a 48-inch stretch of the Lincoln, called Grand Flagship. It features companion seats, walnut cabinet, color TV with VHS player, premium stereo, power divider window, starlite roof and rear-compartment air conditioner.

Hyundai ready for U.S.; may sign dealers this year

Continued from Page 1

cent of the Canadian market through next March.

The 1985 prices are $6,145 (Canadian) for the basic model Pony L, $6,795 for the GL, $7,395 for the GLS and $7,995 for the Pony Plus, a limited edition version including a sunroof and foglights among other special features. All 1,000 Pony Plus models brought to Canada have sold, Wright said. All Pony models are four-doors.

The Pony is powered by an in-line 1.4-liter four-cylinder engine built under license from Mitsubishi, which owns 10 percent of the South Korean company. The GLS version for '85 has a 1.6-liter powerplant.

With a 92-inch wheelbase and an overall length of 165 inches, the car is approximately the same size as a Chevrolet Chevette.

The company's research shows that the typical customer is in the 18-to-35 age group. The most striking demographic has been the high percentage of women buyers — about 40 percent, Wright said.

With sales now expected to hit 20,000 in Canada this year, Hyundai is looking to double its volume in 1986, when the company in selling the Pony, including its front-drive replacement, and the Stellar compact sedan.

The new Giugiaro-designed Pony is due to go into production in South Korea next spring and will be an '86 model in Canada. The Stellar, also designed by Giugiaro, and now being sold in Britain, is scheduled to hit the Canadian market in March, 1985. The rear-drive compact is 174 inches long and has a wheelbase of 101.5 inches.

The Pony and Stellar will arrive in tandem in the U. S., and Wright said it is "99 percent" certain that that will happen in the 1986 model year.

"We're pretty sure they are coming for '86," he said. "But it hasn't been decided whether to start in the fall; January, 1986, or even March, 1986. My guess is that it would be around Jan. 1, but that is strictly a guess."

The process of putting together a dealer network in the U. S. has already begun on an informal basis and "will officially start to happen very soon," Wright said.

"Unofficial contacts have begun, but the actual franchising has not," he added.

• There has been some speculation that Hyundai will link its marketing efforts in the U. S. with a domestic manufacturer or possibly another foreign auto maker with a dealer group in place in this country.

According to one report, Hyundai has rejected an offer by Mitsubishi to sell and service the Pony and Stellar through Mitsubishi dealers in the U. S. However, both companies have denied that an arrangement was discussed.

Wright said Hyundai has no plans to align with another company in the U. S., but will instead establish its own string of franchise-holders.

"The current thinking is to do it the same way we have done it in Canada," he said.

Wright said there will most likely be three U. S. sales offices, probably situated in Detroit, Los Angeles and New Jersey. He said the offices will be established in the near future, possibly by the end of the year.

Hyundai reportedly plans to export 150,000 cars annually to the U. S., although Wright said the firm has not announced sales projections for the American market.

Volvo expands warranty package for '85 models

ROCKLEIGH, N. J.—Beginning with the 1985 models, Volvo of America Corp. claims its automobiles will be covered by "one of the most comprehensive and consumer-oriented warranty packages in the American market."

Heading the list of increased coverage is the new-car limited warranty which now provides 36 months of coverage with no mileage limitation.

In addition to the basic new-car limited warranty which covers repairs due to defects in materials and workmanship, '85 Volvos will be covered for minor adjustments for six months or 7,500 miles.

Also new are a 60-month seat-belt limited warranty and a 72-month corrosion protection limited warranty.

The corrosion protection warranty provides the following: For 36 months, the vehicle will be free from surface corrosion; for 60 months, the vehicle will be free of body section perforation, and for 72 months, the vehicle will remain free of structural corrosion damage.

No mileage limitations apply to the corrosion protection coverage, but a free annual inspection is required.

But no breakup with U. S. union, White says

Canadian UAW chief sees changes

Continued from Page 8

terpart. White would not elaborate on possible changes.

He has been advocating a Canadian Metalworkers Federation which would pull the Canadian UAW away from the international union and into its own relationship with the Rubberworkers, Steelworkers and other such industrial unions in Canada. However, he has said such a union is a few years away.

White denied reports in the Canadian press that once the negotiations are over he will pull the Canadian UAW out of the international union.

However, he said the Canadians must be able to pursue collective bargaining without severe interference (from the U. S.) and some changes must be made.

White has said for more than two years that the Canadians would seek their own contracts. The new agreement with GM, while borrowing some things from the U. S., addressed the Canadian problems.

One difference in the new GM-UAW agreement is a Special Canadian Adjustment which reflects the Canadian inflation rate and the difference in the U. S. and Canadian dollars. The total allowance will be 74 cents an hour over the three years.

"I think if you look at the total (Canadian) agreement, you will see that it is on a par with the agreement here, a little bit different features," said UAW President Owen Bieber.

"If you look at the two contracts, the pension is the same, the basic wage is the same, the holidays are different. There are no new holidays in that contract, but there is a pickup of 2½ PAA (paid absence allowance) days. By the same token, the $500 attendance bonus is not there, profit sharing is not there, the lump sums are not there."

Rod Andrew, vice president and general director of personnel, GM of Canada, said the new contract represented an average increase of $13,000 (Canadian) over the three years.

There are 36,800 UAW-represented GM workers in Canada.

There had also been reports that White and Bieber had a falling out during the Canadian strike, but Bieber said the relationship was "very good."

While not addressing his relationship with Bieber, White has said he had "strained conversations" with Bieber during the talks.

Bieber could not afford to let the Canadians get a contract that could be perceived by the U. S. workers to be better than the one negotiated here.

There is a vast difference in the labor cost in Canada. It is currently about $7.90 an hour less than in the U. S. GM's labor cost in the U. S. is currently $22.40 an hour, but that is expected to rise to about $25.86 under the new agreement.

Half the Canadian difference is due to the devalued Canadian dollar; the rest is because of differences in health care and pension benefits.

Car output slated at 172,244 but GM total is uncertain

By Louise Kertesz
Detroit Reporter

Projections for General Motors plants, resuming operation on a staggered schedule after the strike in Canada, made last week's auto production total uncertain.

Makers targeted assembly of 172,244 units last week, 19.20 percent more than the 144,506 completed the previous week, when seven GM facilities were idle. Last week's output was 9.62 percent better than the year-ago week's 157,125.

Last week's estimated production was shared as follows: GM, 54.67 percent; Ford Motor Co., 24.25 percent; Chrysler Corp., 15.56 percent; American Motors, 2.79 percent; Honda, 1.74 percent, and Volkswagen of America, 0.99 percent.

GM scheduled two overtime shifts Saturday (Nov. 3) at its plants in Flint (Buick G-Line); Detroit; Fairfax, Kans., and Linden, N. J. Plants in Orion, Mich., and Wentzville, Mo., worked one shift Saturday.

Ford Motor also scheduled Saturday overtime at these plants: Edison (N. J.), Kansas City and Wixom (Mich.).

Chrysler's plants in Belvidere, Ill.; Newark, Del., and Fenton, Mo. (St. Louis Nos. 1 and 2) are scheduled to operate two 9-hour daily shifts this week. The Jefferson plant (Detroit) is working two 8½-hour daily shifts.

Truck production tops 60,000 but is down for week

Last week's scheduled domestic truck production of 60,540 units was down 4.61 percent from the previous week's 63,465, but was 4.71 percent better than the year-ago week's 57,818.

So far this year, 2,652,513 trucks have been completed, 31.54 percent more than the 2,016,558 assembled last year at this time.

General Motors plants working two overtime shifts Saturday (Nov. 3) were: Pontiac No. 5, St. Louis and Janesville (Wis.).

Ford Motor Co. also scheduled Saturday overtime at its Lorain (O.) facility.

Chrysler Corp.'s Warren (Mich.) truck plant is operating two 9-hour daily shifts this week.

Canada slates year's best output as GM returns

With General Motors plants back in operation last week after the strike, Canadian car makers projected the best week so far this year: 25,395 units assembled.

But that record could not be reached without GM plants immediately resuming at normal speeds, which was not possible after 11 days off.

At 11,284 cars completed, the previous week's record low for the year was almost 600 units lower than had been expected. The halting of Eagle production at American Motors' Brampton (Ont.) plant for inventory adjustment contributed to the bottoming-out.

Last week's projected output of 25,395 cars was 125.06 percent higher than the previous week's 11,284, and 24.10 percent more than the year-ago week's 20,465.

Last week's truck production of 17,918 units was 45 percent better than the previous week's 12,357 and 45.91 percent ahead of the year-ago week's 12,280.

At Chrysler's Windsor (Ont.) plant, 2,346 Plymouth Voyagers, 2,352 Dodge Caravans and 942 Mini Ram Vans were completed, bringing the total T-115s built this year to 197,421.

U.S. dealer total declines after four quarterly rises

By John K. Teahen Jr.
Managing Editor

After four consecutive quarterly increases, the number of dealerships handling U. S.-made passenger cars slipped a bit during the third quarter of this year.

The latest AUTOMOTIVE NEWS census found 20,863 domestic new-car outlets in operation on Oct. 1, down 32 from the 20,895 counted on July 1.

Third-quarter gains by Ford Motor Co. and Chrysler Corp. were not enough to offset losses by General Motors and American Motors-Renault.

Ford Motor showed an advance of 15 outlets for the July-September period, and Chrysler Corp. was up seven. There were dips of 35 for GM and 30 for AMC-Renault. Volkswagen was unchanged.

That's a drop of 43 for the five companies. A change in the number of intercorporate duals reduced the industry's net loss to 32.

All figures in this article and in the accompanying tables refer to the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

The four consecutive quarterly increases were, indeed, an unusual occurrence in the U. S. dealer picture. It hadn't happened since at least 1955. AUTOMOTIVE NEWS began tracking quarterly changes in 1962 and had found only five quarterly jumps prior to the just-ended string.

Only in the third and fourth quarters of 1963 were there consecutive gains.

• The third-quarter dip of 32 outlets compares with a gain of 94 in the year-earlier period. But third-quarter losses were staggering for a few years before that: 303 in 1982, 260 in 1981, 504 in 1980 and 330 in 1979.

Despite the third-quarter lapse, the domestic dealer count was up 22 for the first nine months of this year. The current 20,863 compares with 20,841 on Jan. 1.

The nine-month figures show gains of 98 establishments for Chrysler Corp. and 26 for Ford Motor. There were dips of 58 for AMC-Renault, 55 for GM and 10 for Volkswagen. A change in the number of intercorporate duals put the industry's increase at 22.

For the first nine months of 1983, the total was up 18.

There was also an advance for the 1984 model year. The present total of 20,863 is 46 more than the 20,817 domestic-car outlets in business on Oct.

Mitsubishi tells toll of quotas

LOS ANGELES. — Mitsubishi Motor Sales of America could expand sales to 180,000 units a year and put dealers in the top 125 U. S. markets if import restraints were lifted, Executive Vice President Richard Recchia said here. MMSA now has 82 dealers in 23 markets, is restricted to 35,000 cars a year and expects to sell another 20,000 trucks this year. The firm has more than 3,000 requests for dealerships.

Nissan Maxima sets sales record

CARSON, Calif.—Nissan reported that its redesigned 1985 Maxima set a sales record during its first month on the American market. October sales totaled 9,249, the best sales month ever for the vehicle in the U. S. The previous monthly sales record for Maxima was 7,855 in June, 1983.

51-day inventory of domestic autos on Nov. 1

Car supply falls to 12-month low

By Kathleen Hamilton
Assistant Managing Editor

Largely because of strikes against General Motors, the domestic auto industry didn't keep pace with demand for its cars during October. The result: A 51-day supply of new cars in dealer and factory inventory on Nov. 1, the lowest level in 12 months.

Auto makers were able to increase production during the month—just not enough to keep pace with sales.

Because of those output increases, the Nov. 1 inventory of 1,296,182 domestic cars was the highest in three months. On Oct. 1, the stockpile had been 1,266,201; on Nov. 1, 1983, it was 1,224,092. At that time, the sales pace was just about the same as it was last month.

A look at the Nov. 1 shares of car inventories shows the price the strikes have exacted from GM: GM's share was 45.01 per-

Table on Page 73.

cent; Ford Motor Co.'s, 31.90 percent; Chrysler Corp.'s, 18.60 percent; American Motors', 3.65 percent; Volkswagen's, 0.57 percent, and Honda's, 0.27.

One month earlier, GM had a larger share and all the other U. S. producers had smaller shares: GM, 48.32 percent; Ford, 30.22 percent; Chrysler, 16.78 percent; AMC, 3.93 percent; VW, 0.70 percent, and Honda, 0.05 percent.

Ford and Chrysler increased their days-supply levels by increasing output, not because of any decrease in sales: The sales rates of each of the Big Three, along with Honda's domestic Accords, increased measurably during the month.

VW sales were down, as it cleaned up its carryover Rabbits in preparation for the Nov. 1 launch of the successor, Golf.

AMC's domestic-Renault sales fell, but its Eagle sales increased, accounting for its days-supply change.

The numbers in the accompanying table also show significant increases in the supply

NEWSPAPER

Showcased at Turin

To rally for Ford

Ford has built four prototypes of this sports car which will put the company back into international rallying next year. The mid-engined, four-wheel-drive vehicle, called the RS200, will be on display at the Turin Motor Show, Nov. 14-25. Story on Page 71.

Sleekness from Ghia

At the Turin show, Ghia is featuring this sleek station wagon based on the floor pan of the North American Ford Tempo. The vehicle, known as the Ghia Vignale TSX-4, has four-wheel drive and a transverse-mounted 2.3-liter engine producing 120 HP. Story on Page 71.

Studio Michelotti's PAC

Studio Michelotti will show the PAC prototype at the Turin Motor Show. The prototype has been developed on the Daihatsu Cuore base. The front-wheel-drive car has a two-cylinder engine, and automatic transmission is optional. The PAC seats up to four persons.

Topless Maserati

Maserati Biturbo has been turned into a convertible by Zagato for the Turin show. The body platform has been strengthened to handle added ragtop stress. First deliveries are scheduled for next spring.

Brickyard beauty

Oldsmobile's Calais will lead the pack as pace car for the 69th running of the Indianapolis 500 May 26. It will be a special fiesta red with silver leather interior. A replica version called the Calais 500 will be offered through some Olds dealerships on a limited basis in the spring. Olds says it will include paint and Indy 500 identification, race-theme interior and seats and a street version of the spoiler.

GM's G-cars join list of autos that won't die

By Dan McCosh
Detroit Reporter

General Motors' rear-drive G-cars joined the list of autos that won't die, as GM announced it has temporarily shelved plans for a $530 million (U. S.) retooling of its St. Therese plant in Quebec.

The plant now assembles Oldsmobile Cutlass Supreme and Pontiac Grand Prix and Bonneville models.

Reason cited for the change in plans is an extended life for the G-body — originally slated to die in 1988 with the introduction of the GM10 "W-body" program.

The GM10 is a broadly marketed program that will update most of GM's current front-drive A-body cars and was intended to replace the rear-drive G-cars as well.

Extended life spans of older cars have been the rule lately. Both GM and Ford have extended their rear-drive full-size cars, to 1988 and 1990, respectively, according to insiders. Chrysler recently said it is continuing production indefinitely of its rear-drive M-body.

Relatively low fuel prices, low cost of the older vehicles in the market and their continuing popularity are cited as reasons for the extended life.

However, both Ford and GM are currently in violation of the existing Corporate Average Fuel Economy requirements and must either restrict sales of lower-MPG cars or expand domestic production of small cars to compensate.

Ford recently revealed that it was extending its EXP program and increasing the emphasis on domestically built cars in response to its CAFE dilemma.

GM presumably soon will have to do likewise, contradicting the trend revealed by its new G-car plans.

IRS to act on Toyota/Nissan pricing and possibly Honda's

Japanese face $500 million tax bill

By Jake Kelderman
Washington Reporter

WASHINGTON. — Toyota, Nissan and possibly Honda, the giants of the Japanese automotive industry, will likely be hit with a tax bill by the end of the year in excess of $500 million for exporting automobiles to the U. S. at unfairly high prices.

According to U. S. sources and statements made by Takashi Ishihara, head of Nissan Motor Co., Ltd., at a press conference in Tokyo, the IRS will impose penalties against the companies as a result of an investigation it has been conducting since 1977.

The investigation determined that the auto makers have unfairly charged their U. S. sales subsidiaries allegedly higher-than-warranted prices for their cars. The U. S. subsidiaries, which deduct the cost of the vehicles as an expense, thereby reduce their U. S. taxable income.

Said Ishihara, "If the IRS finds we've violated Article 482 of the National Tax Act, they will impose a penalty tax amounting to several hundred million dollars."

The IRS thinks the so-called Resale Price Method the companies have been using to determine this transfer price is the wrong method and that they should have been using the so-called Comparable Uncontrolled Price method which determines the transfer price of a comparable item in a sale between unrelated parties.

• The Japanese makers, strongly denying any wrongdoing, argue that sufficient similarities do not exist between the U. S. and Japanese markets to make such a comparison reasonable.

Based on yearly average sales between 1975 and 1982 of approximately 396,000 units for Nissan, 470,000 for Toyota and 277,000 for Honda, the tax liability is likely to be about $200 million for Nissan, $300 million for Toyota and $100 million for Honda, according to industry sources. Whether the companies ever will pay them is questionable.

Nissan and Toyota are sure to appeal the decision (Honda is already in negotiations with the IRS) and, as Ishihara said, the companies have already asked for government-to-government negotiations on the matter.

Ironically, the IRS began its investigations of the Japanese makers as the result of information it received from the U. S. Customs Service which had just concluded a dumping investigation of the Japanese companies and others. The investigation found them innocent of selling their vehicles here at unreasonably low prices.

Meanwhile, Ishihara told reporters in Tokyo that Nissan may well reduce the transfer price of its vehicles because of the continuing low value of the yen against the dollar. He said such a move would permit the Nissan sales subsidiary to profit from exchange rate fluctuations but that it likely would not lead to reduced sticker prices for Nissan vehicles.

UAW, Ford Canada reach tentative pact

By Marjorie Sorge
Labor Editor

The UAW and Ford Motor Co. of Canada reached a tentative three-year agreement last week which basically tracks the General Motors contract ratified two weeks ago.

UAW Vice President Robert White, director of the Canadian region, said the new pact "is a good agreement for our membership," and he said he was pleased that it was reached without a strike.

The settlement came 18 hours before a noon Friday (Nov. 9) strike deadline. Ratification meetings were held over the weekend and the UAW was optimistic the new agreement would be approved by the 14,250 Ford workers.

The new agreement gives workers an average wage increase of 2.25 percent in the first year, scaled from 9 cents to 50 cents an hour and folded into the base rate. There is also a special Canadian adjustment of 25 cents in the first year, 25 cents in the second year and 24 cents in the third year. An assembler at Ford currently makes $9.64 an hour plus $3.44 in cost - of - living - adjustment (Canadian dollars).

The COLA formula was changed to a one-cent per hour increase for every 0.1 percentage-point rise in the Canadian

Dealers confident of recovery

Service Index falls after 18 gains

By Francis J. Gawronski
Service Editor

The string of 18 consecutive monthly increases in dealership service and parts business ended in September when the volume fell 1.7 percentage points below that in the same month the year before.

According to the Automotive News Service Index, dealers' service and parts business in September amounted to 98.3 percent of the volume done in September, 1983. The August increase in shop volume over the year-ago volume was 10.3 percent.

September was the first month since February, 1983, that dealers' shop business did not show a gain over the year-ago figure.

Dealers were hard pressed to explain the dip, but all were confident that service and parts business would bounce back.

Despite the slight decline in the Service Index in September, dealers' shop business for the nine-month period of 1984 increased to 114.5 percent of the business done in the same period a year ago.

Three of the five indicators used in the Service Index were on the plus side in September, with two of them barely making it.

Shop parts sales (those used in both customer-paid and warranty work) were up 4.3 percent, while total labor sales (customer-paid and warranty) were up .06 percent and gross profit on all labor, parts and accessory sales—the most important indicator from the dealer's viewpoint—was up just .02 percent in September.

On the downside, repair orders written declined 6.7 percent in September, while sales of all parts and accessories dipped 1.6 percent.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

The leading indicator for the nine - month period was shop parts sales, up 21.0 percent, followed by gross profit and sales of all parts and accessories, both up 16.1 percent over the year-ago figure.

Labor sales were up 15.7 percent for the January-September period, and repair orders written increased 6.3 percent.

SERVICE INDEX
98.3*

	Sept., '84 vs. Sept., '83	10 mos., '84 vs. 10 mos., '83
Gross Profit on All Labor and P&A Sales	+ 0.2%	+16.1%
Repair Orders Written	— 6.7%	+ 6.3%
Total Labor Sales (Customer & Warranty)	+ .06%	+15.7%
Shop Parts Sales (Customer & Warranty)	+ 4.3%	+21.0%
Sales of All Parts and P&A	— 1.6%	+16.1%

*—Survey by Automotive News shows that dealers' service and parts business in Sept., 1984, was 98.3 percent of business in Sept., 1983. Service business in the 10 months of 1984 was 114.5 percent of business in the corresponding period in 1983.

Down from 305 a year ago

290 U.S. models offered for '85

By John K. Teahen Jr.
Managing Editor

There's an abundance of big cars, small cars and everything in between in the domestic auto fleet for 1985.

The annual AUTOMOTIVE NEWS analysis finds that the manufacturers are offering 290 U. S.-built models for the new season. The total is down a bit from the 305 count at the end of the '84 model year.

There will probably be additions in the coming months as the makers add models to meet a specific situation, but no major influx is anticipated. The 290-model total includes all the car lines that are expected for the '85 model year, even though some of them are not yet on the market.

The current count consists of 140 models for General Motors, 74 for Ford Motor Co., 52 for Chrysler Corp., 17 for American Motors-Renault, 4 for Honda and 3 for Volkswagen.

(Only U. S.-built models are included in the totals for Renault, Honda and Volkswagen.)

The 305 selections at the end of the '84 model year were made up of 157 for GM, 82 for Ford Motor Co., 45 for Chrysler Corp., 15 for AMC-Renault, 4 for VW and 2 for Honda.

There are seven new lines of cars for '85, and three others have been dropped.

Three of the newcomers are from GM. They are the 20-cars, the Pontiac Grand Am, Oldsmobile Calais and Buick Somerset Regal. VW has introduced the Golf, and Chrysler Corp. has the Chrysler LeBaron GTS and Dodge Lancer, which will go on sale Jan. 3. Another Chrysler Corp. addition is the Plymouth Caravelle.

Two of GM's X-car lines have been scuttled — the Pontiac Phoenix and the Oldsmobile Omega. Also gone is the VW Rabbit, which has been replaced by the Golf.

Chrysler Corp.'s gain of eight models resulted from the three new lines plus additions to the Plymouth Reliant, Dodge Aries and Dodge Daytona nameplates. Dropped were the Chrysler E-Class sedan, the Executive sedan (the limousine remains) and the Dodge 600 ES sedan.

AMC-Renault has two more

With Reagan's reelection

4 more years at least of problems for unions

By Marjorie Sorge
Labor Editor

There are four more tough years ahead for the UAW and other labor unions — and that is the best they can hope for.

The worst is 12 or more years of a Republican Administration. Unfortunately, one of the ways to avoid that is for the U. S. economy to fall apart and then the unions could claim proof that the Reagan policies don't work.

News Analysis

If the economy continues to prosper, the Democrats and the unions could be out in the cold for a long time. After all, the American public tends to vote its pocketbook.

The 49-state landslide reelection of Ronald Reagan means less political clout for organized labor, even less than it had in his first four years. If the Reagan popularity can be transferred to Vice President George Bush, the unions and the Democratic Party could be out in the cold for 12 or more years.

Of particular concern to unions is that Mr. Reagan will continue with his conservative policies and will be able to appoint the entire five-member National Labor Relations Board and could appoint up to four new Supreme Court justices. He has already appointed three NLRB judges whom the unions maintain are against organized labor.

The unions are worried about being able to continue their traditional roles if new labor laws are passed, and there will be even more court battles with unions on the defensive.

• The UAW also seems to have lost some of its own members to the Republican Party — at least in the presidential vote. Mr. Reagan took 59 percent of the vote in Michigan, a traditionally Democratic state with high union membership.

UAW Vice President Stephen P. Yokich, head of the UAW's Community Action Program department, the political arm, maintains that the majority of the 300,000 UAW members in Michigan voted for Walter Mondale. But, he said, Mondale's plan to increase taxes cost him votes in the state.

"The Reagan landslide in the presidential race is, of course, a disappointment," said UAW President Owen Bieber, "but the results in Senate and House contests appear to suggest that while the American people may like Ronald Reagan personally, they are unwilling to give him and the Republican Party complete control of the government.

"In addition, the results do not indicate that the voters necessarily support Reagan's posi-

Renault Alpine for U. S. in 1986

The Renault Alpine, a new high-performance sports car, will be offered in the U. S. beginning in the summer of 1986. The Alpine is slated for introduction in Europe early next year. The U. S. version will be powered by a V-6 turbocharged engine.

Looking at election

Less congressional action expected

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Congressional election results find the makeup of both houses nearly unchanged, with the Republicans losing two of their majority in the Senate and picking up only 14 seats in the House of Representatives, which remains under control of the Democrats.

The effect is largely psychological, but that is not to say it is unimportant. The Democrats clearly have to do more than oppose a popular President Reagan; they must contribute ideas; they must build fences. And they will probably start with a close analysis of what those congressional votes supported.

News Analysis

Early indications seem to involve voting on economic issues. Translating this into the legislative branch, it means a Reagan budget and tax "simplification" and "reform" — probably cuts in social spending but none in defense, and adjustments in tax burdens where the special interests (including business) battle to keep things status quo. Certainly, small firms would benefit more from a modified flat rate than larger automotive companies.

But Congress, when it returns Jan. 4, will devote first attention to the Reagan budget, followed by the inevitable problem of paying for the budget via taxing measures. This means that less attention will be paid to other traditional areas of concern for the auto industry, such as environmental regulation.

It is expected, however, that both the Clean Air Act and the Vehicle Safety Act will be reauthorized during the next Congress. Both provide opportunity for some modest changes — a push for alterations in emission standards and perhaps tidying up in some safety areas.

Senator John Danforth, Missouri Republican, and Rep. Tim Wirth, Colorado Democrat — both air-bag supporters — are on hand and are expected to be active, but major changes cannot realistically be expected.

Another issue — scheduled to arise for the third time before Congress — is the UAW-sponsored domestic-content bill, also backed as a last resort by Ford Motor Co., Chrysler Corp. and American Motors, but opposed by General Motors and all imports. The sticking point in the past has been the Senate, despite two-time passage by the House.

In this area, the utter defeat of Democratic presidential candidate Walter Mondale — who strongly supported domestic content with enthusiastic UAW and AFL-CIO backing — probably means the measure may not even get to a vote, if indeed it receives much attention.

This goes back to the psychological effect of the Democratic and union defeat, rather than the actual makeup of the Congress itself.

As for all those industrial policy ideas the Democrats have, forget it.

The fact that less action can be expected from Congress is something the auto industry will be more than happy to accept.

Kenosha's future tied to labor costs—AMC

By Marjorie Sorge
Labor Editor

The future of American Motors' Kenosha (Wis.) assembly plant hinges on how competitive labor costs are after a new agreement is negotiated with the UAW next year, the company said.

AMC has promised the 8,600 hourly and salaried workers that the plant will continue to build the Reliant Alliance and Encore through the life of those vehicles, probably through 1989, a company spokesman said. Beyond that, no plans have been disclosed for the assembly operation and there are no plans for a new Alliance or Encore, he said.

Rudy Kuzel, president of UAW Local 72 in Kenosha, said the union met with Jose Dedeurwaerder, AMC's president and chief executive officer, last July. At that time, the union was told the Alliance would stay in Kenosha throughout its lifetime, but the company said the local labor agreement is non-competitive.

According to Kuzel, Dedeurwaerder told them AMC would not look favorably on future investment in Kenosha unless the plant became more competitive.

"I am hopeful we can find a solution," Kuzel said.

However, the Kenosha operation is not competitive with either foreign or domestic manufacturers, and much of that non-competitiveness is due to labor costs which include hourly wage rates, work rules and benefits.

An assembler at AMC will make about $13.38 an hour effective Jan. 1. Assemblers at Ford make $12.83 an hour while those at GM make $12.82 an hour in the first year of the new agreement.

The current contract provides an employe investment plan worth between $110 million and $115 million, earmarked for AMC's $900 million new-product program which included the Alliance when the contract was negotiated in 1982.

The workers deferred some annual raises, casual days off and some cost-of-living-adjustments (COLA) for the investment plan. The money will be reinstated into the workers' checks beginning in January at 10 percent interest. The paid days off will be restored in 1985.

The contract between the UAW and AMC in Kenosha expires Sept. 15, 1985.

• According to some sources, AMC makes an average of only $41 on each car it sells while other major auto makers make an average of $400 a car. However, AMC is basically a small-car company and the profit margin on small cars is low while

NHTSA lists status of its auto probes

WASHINGTON.—After some four years, NHTSA is again listing the status of its safety-related defect investigations.

While these lists are not being distributed routinely to press and public, they are available upon request.

In October, NHTSA opened an investigation into engine support brackets pulling away from the frame in some Chrysler Corp. cars. It is also looking into front-axle ratio valve malfunctions — an area brought to the agency's attention by the Center for Auto Safety.

Moreover, NHTSA has upgraded its investigation into Peugeot transmissions jumping out of gear on turns.

NHTSA has sent recall requests to Jaguar for seat-belt retractors on 1977-80 Triumphs and MGs and to General Motors for rear-brake lockup on 1981-82 Chevette diesels.

Among the requests for information which have been sent to manufacturers is one involving 1979-82 Ford Motor Co. Escort, Lynx and Mustang front-seat track and mounting. This is the case in which the Center for Auto Safety reported to NHTSA the existence of a dealer service bulletin explaining cracks in the floor pan and the recommended fix of welding sheet metal.

• Other requests for data have gone to: Ford about front-seatback failure in 1981 Escort/Lynx models; to GM about horn pads on 1981-84 Buicks and about rear-wheel detachment on 1982 Camaro/Firebird models; to Mazda about steering lockup in 1982-84 vehicles; to Ford about ineffective brake systems on 1980 Thunderbird/Cougar models; to GM about rear suspensions on Chevrolet S-10 and GMC-15 models, and to Ford about stalling due to vapor lock on 1981-82 chassis.

More requests for data have been sent to: Ford about hoods flying up on 1982-83 Escort, Lynx, EXP and LN7 models while they are being driven; to Honda about sudden loss of headlights on 1977-83 Accords and Civics; to Chrysler about engine-mount support brackets on 1984 Plymouth Voyagers; to Chrysler about fuel tank leakage and failure on 1976-79 Aspen/Volare models, and to GM about power brake assist on

Pontiac 1000 for '85

New in '85 for the Pontiac 1000 is the expanded availability of the five-speed manual transmission. It can be ordered in place of the standard four-speed in both the three- and five-door body styles, with or without air conditioning. The 1.6 overhead cam four-cylinder engine remains standard. A three-speed automatic transmission continues to be available.

Effects of Canadian strike overcome

Month posts modest car-sale gain

By Jenny L. King
Staff Writer

Overcoming the temporary odds posed by the UAW strike against General Motors in Canada, which affected GM's October production throughout North America, U.S. auto makers posted a modest 3.82 percent sales gain this October compared with the same month of 1983.

Import sales were up 8.47 percent, achieving their best October total in history and claiming 23.57 percent of the market. A year ago, import penetration was 22.80 percent.

Domestic sales climbed 3.82 percent during the month, to 689,563 from 664,194 last year. They were boosted by the addition of an extra selling day, so the daily rate of 25,539 was down 0.03 percent from 25,546. There were 27 selling days this year and 26 in October, 1983.

Import sales numbered 212,700, up 8.47 percent from 196,095 last year, the former record for the month. Best October penetration was 25.66 percent in 1982. A year ago, it was 22.80 percent for the imports.

Total retail sales for October were 902,263, up 4.88 percent from 860,289 in 1983.

Year-to-date domestic auto sales were 6,790,153, up 20.28 percent from 5,645,354 in 1983. Import sales through October totaled 2,041,205, up 2.04 percent from 2,000,423 a year earlier.

Industry sales were up 15.58 percent for the calendar year, to 8,831,358 from 7,641,217.

It was three up and three down for the major domestic makers in October. Ford Motor Co., Chrysler Corp. and Honda reported increases while General Motors, American Motors and Volkswagen were off.

Ford sales, up 29.18 percent so far this calendar year, were 27.72 percent ahead for the month, to 192,012 from 150,340. Chrysler was up 19.69 percent for October, to 90,891 from 75,938, and Honda doubled its total, to 13,283 from 5,219.

• GM, suffering production stoppages from the strike against it by Canadian members of the UAW, was down 8.56 percent for the month, to 375,075 from 410,177. AMC missed its year-ago mark by 8.16 percent, dipping to 14,092 from 15,344. VW reported sales of 4,210 Rabbit sedans, a 41.33-percent decline from 7,176 a year earlier.

GM's sales slump cost it more than seven percentage points in market penetration: 54.39 percent compared with 61.76 percent a year earlier. Ford picked up five points, going to 27.85 percent from 22.63 percent.

Chrysler moved up to 13.18 percent from 11.43 percent; AMC had 2.04 percent compared with 2.31 percent; Honda earned 1.93 percent compared with 0.79 percent, and VW dropped to 0.61 percent from 1.08 percent.

Ford Motor Co. makes showed the greatest sales strength in October among all the domestics. Lincoln was up 64.51 percent, Mercury was up 26.05 percent and Ford had a 25.27 percent increase.

At Chrysler Corp., Chrysler was up 20.92 percent, Dodge was up 20.78 percent and Plymouth was up 16.93 percent.

Chevrolet was the only GM make to advance past its 1983 total. Chevrolet was up 1.23 percent, Pontiac was off 3.39 per-

Fuller 7-speed transmissions anticipate tomorrow.
Innovative response to trucking needs has always been our tradition.
Our 7-speed transmissions are a case in point.
The T-11607, for example, has been performing in key fleets for years. Our new T-8607 is coming on line now. The lightest 7-speed available today. It matches the torque ratings of 10-liter class engines. Its smaller size and lower torque rating also make it the ideal match for short-haul tractors with mid-range engines.
For more information on Fuller 7-speed transmissions, contact your Eaton Truck Components representative, or write Eaton Corporation, Transmission Division, P.O. Box 4013, Kalamazoo, Michigan 49003.

Ford Credit net shows 3 pct. gain in third quarter

DEARBORN. — Ford Motor Credit Co. reported slight increases in profits for the third quarter and the first nine months of 1984.

Net income for the quarter was $82.1 million, up 3.7 percent from last year's $79.2 million. For the nine-month period, net income was $239.1 million, up 4.8 percent from last year's $228.1 million.

Ford Credit said it provided financing for 289,000 new vehicles in the first nine months of 1984, up from 270,000 last year, and it financed 27 percent of all new vehicles sold by Ford dealers.

Higher borrowing costs this year have helped keep earnings increases lower. At Ford Credit, the average borrowing cost was 11.35 percent this year, compared with 10.23 percent last year.

Domestic cars up 16 pct.; imports down 4 pct.

Registrations top year-ago month

By Jenny L. King
Staff Writer

U. S. new-car registrations in August dipped 5.72 percent from the higher July level but were up 10.13 percent compared with the same month a year earlier and were fourth best for the current calendar year.

R. L. Polk & Co. reported total August registrations of 851,715 domestic and imported passenger cars, down some 50,000 units from the 903,390 posted in July. In August, 1983, registrations added to 773,362.

Imports again lost ground, as has been their fate since the domestic market began its comeback in late 1983. The import share of the market plunged to 26.74 percent this August from 30.78 percent for the month a year ago.

Import registrations totaled 227,758 in August, down 4.31 percent from 238,012 a year earlier.

Domestic new-car registrations were up 16.55 percent August to August: To 623,957 from 535,350. Domestics were down 8.15 percent from the 679,287 posted in July of this year.

Each of the major domestic auto makers came out ahead of 1983 in shares of the market for the month, with Ford enjoying the greatest gain. Ford's share was up 2.13 percentage points, to 18.53 percent from 16.40 percent. General Motors was up 1.40 percentage points, to 44.46 percent from 43.06 percent.

Chrysler Corp. edged up to 8.78 percent of the total market from 8.36 percent, a difference of 0.42 percentage points, and American Motors was up 0.09 percentage points, to 1.49 percent from 1.40 percent.

• Excluding the imports, the August market breakdown showed GM with 60.69 percent, Ford with 25.29 percent, Chrysler with 11.98 percent and AMC with 2.04 percent.

A year earlier GM had 62.20 percent, Ford had 23.69 percent, Chrysler had 12.08 percent, American Motors had 2.02 percent and miscellaneous domestics accounted for 0.01 percent. The miscellaneous category represents less than 0.01

Bright days for light trucks

Looks like two banner years in a row

By Jack Walsh
Truck & RV Editor

Light trucks had their second-best year ever in the 1984 model year, and the 1985 models, according to industry observers, should do about as well or possibly better.

Only two all-new entries are scheduled at this time in the light-truck market in 1985, the General Motors compact M-van and the small Ford Aerostar van.

However, there have been numerous engineering refinements, changes in equipment and comfort features, and new options in the existing products.

In the 1984 model year, 3,664,149 light trucks of all types were retailed in the U. S., only about 4,000 fewer than the all-time high of 3,668,204 sales in 1978.

With the entry of the new GM and Ford small vans, plus continued growth in sales of the Chrysler T-vans, some industry leaders are confident that light-truck deliveries will hit a new high in the 1985 model year.

• The non-captive Japanese compact trucks — Toyota, Nissan/Datsun, Mazda, Isuzu and Mitsubishi — were important contributors to the near-record light-truck performance in the 1984 model year.

During the year, 518,076 compact imports were sold, representing 14 percent of the industry total. In the 1978 model year, only 176,649 non-captive imports were retailed and they accounted for slightly less than five percent of the market.

The fuel-efficient Japanese compacts have been increasing their market share yearly since 1978 in spite of the introduction of the small domestic vehicles in the 1982 model year.

In the 1981 model year, when light-truck sales hit a seven-year low of 2,069,755 units, the non-captive share was almost 12.5 percent with 253,901 sales.

There will be greater availability of the Chrysler compact vans in 1985. Pat Keegan, truck operations general manager, said he expects 1985 model-year deliveries to approximate 250,000 units, compared with about 150,000 in the past year.

• In 1984 the Chrysler compact-van mix was 85 percent window models and 15 percent panel. It is being changed in 1985 to 90 percent window vans, but with the boost in production rates there will be more panel vans available in 1985 than in 1984, according to Keegan.

The small GM vans — Chevrolet Astro and GMC Safari — are off to a slower-than-anticipated start because of the newness of the product, a renovated plant and work force new to the product, and aren't likely to be available in any great volume until the first quarter of 1985.

Ford's Aerostar now is scheduled for a May startup after several postponements for reasons similar to those at GM.

Neither GM nor Ford have estimated how many of the compact vans their dealers will retail in the 1985 model year, but the combined total is expected to be about 150,000 units. Both companies plan a 50/50 split in production of window and panel models.

Ford calls 1985 the "year of the powertrain" for its light trucks, with extensive changes in engines, transmissions and axle ratios.

• For starters, a 2.3-liter EFI (electronic fuel injection) inline four is the new standard engine in the compact Ranger pickup. A 2.3-liter, turbo-charged diesel, which Ford said has significant HP and torque improvements, is a new option in the Ranger and Bronco II.

A five-speed manual overdrive transmission has replaced the four-speed as the standard gearbox for these compact vehicles, and a four-speed automatic overdrive also is new for both truck with gasoline power. A new 4.10-to-1 axle ratio is offered for greater pulling power.

An optional 5.8-liter high-output 4V V-8 will be available in December in full-size F-Series light trucks, and the 6.9-liter diesel V-8 will be available for the first time in the crew-cab models.

The optional 5-liter V-8 now features a power-boosting, multiple-port electronic fuel-injection system in place of the former carburetor system.

The 5.8-liter HO V-8 will be offered in December in vans of more than 8,500 pounds GVW, and the 5-liter EFI V-8 will be available next month in the full-size Bronco. With it will be the first automatic overdrive transmission offered in this vehicle.

• Chrysler is counting on the new five-year/50,000-mile powertrain warranty on all domestic light trucks to boost its 1985 model sales to between 550,000 and 600,000 units, compared with about 475,000 in 1984.

There also is a 5/50 outer-panel rust-through warranty on both the domestic trucks and the imported Ram 50 compact pickups.

Conventional 4x4 pickups and Ramcharger sports/utility vehicles now have the new "Ram Trac" front-axle system which permits switching to and from the 4x4 mode at normal driving speeds by moving a lever.

A new "Fuel Pacer" shift-indicator light, which signals the driver when proper RPMs are attained to upshift with optimal fuel economy, is standard on all full-size trucks with a 225-cubic-inch six and manual transmission and compact vans with the manual transaxle.

The optional 5.2-liter V-8 for conventional pickups have been improved to provide greater

Planning Chrysler's H-cars

Aimed at baby-boomer tastes and income

Chrysler Corp.'s new H-cars (Dodge Lancer and LeBaron GTS) are aimed at the tastes and income of the new baby-boomers, an aspiration shared by virtually all domestic auto companies cognizant of the emergence of those born after 1946 as the dominant economic class in the mid-1980s.

"We've never played in this market, in a way we still don't. Nobody is quite there yet," says Donald L. Gschwind, Chrysler vice president, program management.

The crowding of the field with competitive products makes the H-car one of Chrysler's riskiest marketing gambles so far. Planners plumbing yuppie yearnings and earnings find remarkable agreement on the basic profile of today's most populous market. But when it comes to translating buyer demographics into a desirable automobile, manufacturers have launched themselves in widely different directions.

Chrysler's big gamble with the H-body is its anticipation of some 160,000-unit annual sales of a single four-door, liftback model. Without the flexibility of two-door or station wagon variations, Chrysler still must exceed its currently most popular four-door, the Chrysler Fifth Avenue, which sold some 80,000 units in the 1984 model year, by a significant margin. Chrysler's minimum sales expectations for the H-body even have to exceed combined 1984 Aries/Reliant four-door sales of some 155,000 cars.

Adding to Chrysler's pre-launch anxiety is the fact that its competition, after researching the identical yuppie market, opted to go off in different directions with '85 offerings.

General Motors' own interpretation for the hyphenated surname crowd is a more or less conventional two-door coupe, to be followed next year by a four-door, while Ford's $16,000 imported Merkur XR4Ti is pegged at a much lower volume, albeit higher-priced market in the 20,000-unit range.

• Chrysler launches its Chrysler LeBaron GTS and Dodge Lancer models in January.

The H-body cars are built on a platform shared with the Laser/Daytona coupes introduced last year. The 103-inch wheelbase thus matches both those cars and the Plymouth Caravelle and Chrysler New Yorker. The rounded, aerodynamic styling makes the H-car appear smaller than the other Chrysler sedans, although its front-seat dimensions actually are slightly larger than the New Yorker.

The most significant styling feature is Chrysler's retention of a notchback profile while incorporating a fold-down rear seat and a lifting "hatch." The system is similar to the one pioneered by Swedish-maker Saab, and allows full trunk security, notchback styling with most of the benefits of a hatchback.

"Styling is aerodynamic, but not aerodynamic in the sense of being ugly," says Gschwind. "Aerodynamics is an expression of being modern. Also, it does improve fuel economy, and when we were planning the car, we didn't know what the fuel economy would be for '86, '87 and '88.

"The car is designed without a vinyl roof — I wouldn't even

Continued on Page E-31

Trucks

Continued from Page E-27

economy with no loss in performance. Compression ratio has been increased from 8.4 to 1 to 9 to 1, and the carburetor's fuel-air burn rate has been boosted.

• The improved V-8 is the standard engine in 1985 in B350 vans and wagons with a 7,500-pound GVW rating, and is optional on B150 and B250 models. The Ram 50 Royal and all Power Ram 50 4x4 compacts now have a modified 2.6-liter four as the standard engine, plus a five-speed manual overdrive transmission.

New to the Chevrolet/GMC S-pickups and sports/utility vehicles for 1985 is a bigger, more powerful base engine. The 2.5-liter L4 develops 92 HP at 4,400 RPM and 134 foot pounds of torque at 2,800 pounds. A four-speed automatic transmission also is a new option in these vehicles.

In the full-size pickups, vans, sports/utility vehicles and Suburbans, the new "Vortec" 4.3-liter V-6 gasoline engine replaces the 4.1-liter in-line six as the standard power plant. It features swirl-port combustion chambers for improved mixing of fuel and air.

The GM compact window and panel vans, unlike their Chrysler rivals, are rear-wheel-drive vehicles, and the window models can accommodate up to eight adults.

The vans have a sliding door on the right side and swing-out rear doors which GM says provide a wider opening than the full-size vans.

• A 2.5-liter, fuel-injected four-cylinder engine is the standard engine and produces 90 HP. A 4.3-liter, 155-HP V-6 is optional. A four-speed manual is the base transmission, and a five-speed manual and four-speed automatic also are available.

GM claims that its small vans, depending on equipment, can tow up to 5,000 pounds, 3,000 more than the Chrysler and Toyota models. They have a wheelbase of 111 inches and an overall length of 176.8 inches.

For 1985, the downsized Jeep Cherokee and Wagoneer will have an optional 2.1-liter turbocharged diesel available in all states except California. It was developed by Renault and will be offered on all vehicles but base models.

Command-Trac, introduced last year as a part-time four-wheel-drive system incorporating "shift-on-the-fly" capability, will be standard on all Jeep models.

"Shift-on-the-fly" also has been incorporated for the first time in Jeep's Selec-Trac, the full-time 4x4 system.

New convenience features for 1985 include rocker/recliner front-bucket seats adapted from the Renault Alliance, popout rear-quarter window vents on the two-door Cherokee (spring availability), and a service-control monitor to check all vital fluid levels. □

Would make 1984 a record year for profits

Big Four on target for $10 billion

By Michelle Krebs
Financial Editor

Domestic auto makers are well on their way to their most-profitable year ever.

Analysts are expecting the Big Four auto companies to make more than $10 billion this year.

Sales for the Big Four hit an alltime high of $35.45 billion in the third quarter, compared with last year's $31.48 billion, the previous record. Profits for the quarter amounted to $1.06 billion, slightly under last year's record $1.16 billion.

For the first nine months of 1984, however, the domestic companies set records for profits as well as sales.

Profits were $7.61 billion, up 93 percent from last year's $3.95 billion. Sales hit $119.34 billion, up 22.5 percent from last year's $97.5 billion, the former peak.

Ford Motor Co. and Chrysler Corp. set the pace by breaking all previous records for earnings and sales for the third quarter and the nine-month period.

Ford's earnings for the quarter were $379.7 million on sales of $11.84 billion. For the nine-month period, Ford's earnings amounted to nearly $2.2 billion on sales of $34.95 billion.

• Chrysler Corp. also set records for the quarter and first nine months. Its net income for the third quarter amounted to $261.6 million on sales of $4.1 billion. For the nine-month period, Chrysler's earnings were $1.77 billion on sales of $14.22 billion.

Even American Motors Corp. contributed with a third-quarter profit of $2.5 million on $1.01 billion in sales. AMC's profits for the first nine months of 1984 amounted to $12.3 million on sales of $3.15 billion.

Only General Motors' quarterly earnings were off from the previous year. The company said strikes in the U.S. and Europe were the reason.

Third-quarter earnings for GM were $416.8 million on sales of $18.54 billion. Earnings were down 43.43 percent from 1983's $736.9 million, but sales set a record, topping last year's $17.62 billion.

Despite the third-quarter slump in net income, GM set records for the nine-month period. Earnings for the period were $3.64 billion on sales of $63.0 billion.

GM is expected to earn about $5 billion for the year, though fourth quarter results may be off as well because of a 13-day strike by Canadian auto workers, which ended Oct. 29.

Ford is expected to make $2.9 billion and Chrysler should earn $2.4 billion.

Until now, this is what you've really needed to heat with waste oil

Burning waste oil to heat your garage can save money.
But until now, when you put theory into practice, you could get sharp pains between the ears.
Here's what the new Black Gold Model 150 Horizontal Multi-Oil Fired Furnace has done to eliminate your need for aspirin.

Ex-headache #1:
Many waste oil furnaces must be lit by hand. You have a choice of a long match, or a short match and some paper. Black Gold is fully automatic and thermostat controlled. Set it and forget it.

Ex-headache #2:
Because waste oils are dirty, other furnaces on the market must be cleaned frequently — some once a month, some once a week, some every day. On one of them, you have to remove and replace 78 screws every time you clean it. Occasionally you can do this without losing a single screw. Black Gold 150 needs cleaning normally only once a year.

Ex-headache #3:
Other units have an efficiency of 70% down to 40% or lower. You might think this is good. Black Gold thinks you should do better. Much Better. With its specially designed, field proven heavy duty burner, the Black Gold 150 delivers 85% efficiency, with #1 and #2 heating oil (ASTM D396), and waste crankcase oil or automatic transmission fluid. Black Gold 150 is now the safest, most efficient, most reliable multi-oil furnace now on the market. ETLM listed. Meets local and NFPA codes.

You'll find a lot of reinforcement in our new brochure called TURN GUNK INTO GOLD — crammed with details on how to convert your used oil into free heating fuel — without going to the medicine cabinet. Write or call today for a free copy.

Japan's third-quarter sales slump; midgets fall 21 pct.

TOKYO.—In the third quarter, passenger-car sales in Japan slumped 13.55 percent from the same period in 1983. Sales amounted to 720,189 including 550-cc midgets, against 833,139 last year.

In those figures, it is the statistics for September that have caused concern. A Toyota spokesman said that his company had been surprised by the downturn, in view of the fact that Japan's economy still appears to be growing at about 4-percent per year.

At present, the increase in sales for the year is less than 2 percent, and the third-quarter trend must be reversed if this level is to hold for the full year.

It is also evident that the halcyon days of the 550-cc midgets are over, as far as passenger cars are concerned. After several years of strong growth, sales slumped drastically by 21 percent in the past quarter.

In September, passenger-car sales totaled 255,248, down 8.5 percent from the 279,067 recorded in the same month of 1983. The reason that more weight is attached to this slump than that in the previous months is that last year a change was made in legislation in Japan and it took effect July 1, 1983.

The interval before a mandatory inspection and overhaul on passenger cars is necessary, was increased from two to three years. This is a costly business, the fee ranging from about $300 for a small hatchback to more than $1,000 for a luxury car.

Therefore, sales hit record levels in July, 1983, and sales in August, 1983, were also high. The industry had expected sales to be lower in July and August of this year, but to pick up again in September, especially in the 1.5-2.0-liter class, which has been attracting buyers of smaller autos in the past year or so. But sales in both sectors slumped.

Toyota's September sales fell 4.4 percent to 102,240, whereas Nissan's sales fell 8.7 percent to 78,400. Mazda suffered a similar loss, while Honda sales were down 18 percent at 14,500 passenger cars. Mitsubishi sold 35 percent fewer cars than in the same period last year, at 11,650.

On the other hand, Daihatsu managed to increase sales by 3 percent to 4,920 units, and Subaru increased sales by 72 percent to 5,500, still gaining from the addition of a completely new range at the beginning of the year.

Car-truck merger expected to aid VW in Brazil

FRANKFURT. — Volkswagenwerk expects further benefits from major efficiency measures in its Brazilian operations including a merger of its car and truck subsidiaries into VW do Brazil.

The truck subsidiary, Volkswagen Caminhoes, lost about $27 million last year, while VW do Brasil lost about $6 million.

In the merger, the German company retains an 80 percent interest, with 10 percent held by Kuwait and 10 percent by the Brazilian group, Monteiro Aranha. The truck business will be run as a separate division within the company.

VW cut prices in Brazil following a drastic decline in demand and now sees signs of a recovery in truck sales, with domestic and export deliveries during the first seven months of this year up 36 percent over last year.

But the car market remains in the doldrums, with deliveries in the first seven months of 1984 down almost 20 percent below last year.

VW is counting on a gradual increase in demand in the car market, with improved results in earnings.

PPG Industries offers replacement glass chart

PITTSBURGH. — The 1984 automotive replacement glass interchangeability reference chart is available from PPG Industries.

The chart provides designation numbers for windshields and tempered glass parts for 1984-model vehicles and corresponding numbers of interchangeable parts from previous years.

Bulk quantities are available by writing to PPG Industries, One PPG Place, 8 North, Pittsburgh, PA 15272.

Domestic cars up 16 pct.; imports down 4 pct.

Registrations top year-ago month

Continued from Page 26

percent of either the domestic or the total market this year.

With the imports dropping four percentage points in market share, domestic small cars and luxury cars took advantage of the opportunity.

Luxury models were up to 8.30 percent in August from 4.97 percent last year. Standards dipped to 10.98 percent from 12.11 percent. Intermediates dropped to 23.75 percent from 26.18 percent. Compacts were up to 18.68 percent from 16.38 percent, and subcompacts gained two percentage points, climbing to 11.55 perecnt from 9.58 percent.

Excluding imports, August, 1984, registrations included intermediates with 32.42 percent of the total, compacts at 25.50 percent, subcompacts with 15.76 percent, standards at 14.99 percent and luxury models at 11.33 percent.

Twelve months earlier, intermediates had 37.82 percent, compacts had 23.66 percent, standards had 17.49 percent, subcompacts had 13.85 percent and luxuries had 7.18 percent.

• Registrations for the first eight months of the current calendar year were up 16.31 percent from the 1983 total, to 6,770,514 from 5,821,235. Compared with the same segment of 1982, the distance was even more dramatic: Up 34.55 percent, from 5,031,804.

Imports were up 0.23 percent in numbers for the first eight months but dropped 3.90 percentage points in penetration, to 24.38 percent from 28.28 percent. This year they totaled 1,650,289 compared with 1,646,463 in 1983.

Domestic registrations were up 22.65 percent from the preceding year, to 5,120,225 from 4,174,772. The domestics numbered only 3,534,482 through August of 1982.

GM and Ford both made substantial gains in market penetration for the first eight months of this year. GM was up 2.26 percentage points, to 45.69 percent from 43.43 percent. Ford climbed to 18.82 percent from 16.72 percent, a difference of 2.10 percentage points.

Chrysler slipped 0.14 percentage points in penetration, AMC was down 0.31 percentage points and miscellaneous domestics dropped out altogether.

Domestic makes moving up in penetration for the first eight months of the year included: Chrysler, Ford, Lincoln, Mercury, Chevrolet, Oldsmobile and Pontiac.

Plymouth and Dodge were down as were Buick, Cadillac and AMC.

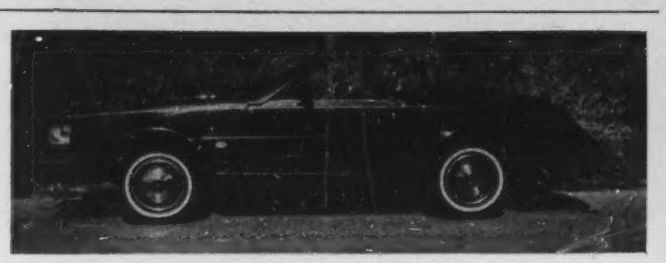
We manufacture a complete line of all front and rear wheel drive limousines, including Cadillacs, Lincolns, Chryslers, Oldsmobiles & Volvos



1985 Seville SL Roadster

American Custom Coachworks, Beverly Hills, Calif., will produce only about 100 of these Cadillac Seville SL roadsters for the 1985 model run. Dealers' suggested list price: $65,000.

Smith's view of labor pact: Partnership, non-inflationary

By Marjorie Sorge
Labor Editor

The new three-year agreement between the UAW and General Motors is a "partnership" and "non-inflationary," according to GM Chairman Roger B. Smith.

"This document—in so many of its provisions and paragraphs—emphasizes that the company, the union and our employes are partners in business," he told the Manegold Lecture Series at the University of Wisconsin in Milwaukee. "When the business is successful, our employes stand to gain. Our success is their success."

While the contract represents a teamwork approach, it also has the capability of being non-inflationary, he said, adding that few other agreements have accomplished that.

According to Smith, "If we can work with the union and our employes to increase our operational efficiency the way we think we can, this agreement should be non-inflationary."

It has been estimated that the new pact will improve GM's productivity by 5 percent in each of the three years.

The backbone of the new contract is the six-year, $1 billion Job Opportunity Bank—the job-security program. It provides workers laid off because of outsourcing, new technology, plant consolidations or productivity improvements with retraining for jobs either inside or outside the corporation.

"The program protects people, not positions," Smith said. "This means, of course, that some employes may have to move to different locations as they accept new assignments. It also means that the size of our workforce may go up or down, as necessary, to protect our competitive position. But the more operationally effective we become, the better chance we have of preserving jobs and creating new ones."

Smith admitted that both sides have had a "pretty narrow, provincial orientation in the past" with adversarial attitudes. But, he said, the worldwide competition has changed that.

"In our 1984 contract agreement with the UAW, we designed a document that is conceptually good," he said. "We feel confident of that. But its real test will be how well the parties join together to make it work."

Entries open for this year's DANDY awards

DETROIT. — The Newspaper Advertising Bureau is taking entries for its 12th Annual Auto Dealers Newspaper Display Advertising Competition.

The DANDY awards are given to honor the best automotive display advertising in daily newspapers during 1984. Entries close Nov. 21.

The NAB is looking for dealers' best ads from 1984, no matter where they run in the paper, covering any phase of the business from new and used cars to model cleanup and special promotions, said Val Corradi, the bureau's vice president for automotive sales.

DANDY awards will be given for the best campaign and single ads in three categories — dealer associations, individual dealers in markets served by daily papers with less than 100,000 circulation and individual dealers served by a newspaper with more than 100,000 circulation.

A special award will be offered for the best use of color in dealer or dealer association display advertising.

A second special award will go to the best campaign or single ad by a dealer trade association or multi-line group.

Ads or campaigns must have run in a daily or Sunday newspaper between Jan. 1 and Nov. 21, 1984.

The DANDY award winners will be announced Jan. 26, opening day of the NADA convention in San Francisco.

Entries may be addressed to DANDY Awards, Newspaper Advertising Bureau, 280 N. Woodward Ave., Birmingham, Mich. 48011.

Approval granted for joint R&D in tool industry

WASHINGTON. — A recent change in federal rules governing joint research and development frees the domestic machine tool industry to form a limited partnership for research activities, the Justice Department has announced.

The machine tool builders will establish an industry contractor that will arrange research and development work through universities, independent researchers, machine tool manufacturers and itself.

The contractor will be assisted by an advisory council composed of representatives from six to eight machine tool manufacturers, representatives from the automobile and aeronautics industries and possibly representatives from companies that supply materials used in manufacturing machine tools, such as steel.

Olds sales managers club formed

Oldsmobile dealerships in Southern California have formed an Olds Sales Manager's Club seeking to increase professionalism. More than 50 dealers, sales managers, fleet managers and zone personnel attended the first meeting, including, from left, Mark Thimmig, zone development manager; John Lennon, zone manager; Dave Roark, professional sales trainer, and Don Jensen, club chairman and general sales manager of Hansel Oldsmobile, Fullerton.

Court nixes EPA rescission of waiver for Petrocoal

WASHINGTON. — The U. S. Court of Appeals here has told the EPA that it must find another way if it wishes to rescind a waiver it granted for production of a methanol-blend gasoline known as Petrocoal.

In a one-page order, the court remanded the matter back to the agency where it has been a hot potato since EPA first granted the Petrocoal waiver to its maker, American Methyl Corp.

Petrocoal is a blend of methanol and gasoline in proportions as high as 9 percent methanol. Both U. S. and import auto companies objected to the waiver on the grounds that such a concentration of methanol was more corrosive than their fuel systems could handle and that its use would result in driveability problems in their vehicles.

Indeed, the court's decision overturns what is in effect the EPA's response to those objections.

The court's order (an opinion is to be announced) does not end the matter, however. The auto makers, through the MVMA, have their own suit pending that challenges the legality of the original waiver EPA granted for Petrocoal.

Name changed

NEW YORK. — American Pullman Coachbuilders, Inc., has a new name. The company is now known as APC Coachbuilders, Inc. Formed in 1979, the company is based in Brooklyn.

Runzheimer surveys managers

Fleets 'wait and see' on minivans

By Francis J. Gawronski

One-third of all corporate automotive fleets plan to add minivans in 1985, according to a minisurvey of 30 U.S. firms, conducted by Runzheimer Reports on Transportation, an industry newsletter published by Runzheimer International. (See first table.)

Thirty percent of the survey respondents said they currently have one or more minivans in their fleets. (See second table.) Of these, the Rochester (Wis.)-based management consulting firm said, the average number of minivans per fleet is 11, with a range between one and 24.

MINIVAN PLANS

Fleets planning to add minivans in 1985

All Fleets	Pct.
Yes	33
No	47
Don't Know	20
Fleets with minivans	
Yes	55
No	1
Don't Know	44
Fleets without minivans	
Yes	25
No	65
Don't Know	10

Those fleet managers who already have minivans in their fleets are most likely to add more next year, the report said. Over half — 55 percent — said "yes" to adding one or more in 1985.

Only 25 percent of those respondents who don't have minivans in their fleets are planning to obtain one or more in 1985, according to Runzheimer.

The Runzheimer newsletter cites the largest planned switch to minivans among the survey respondents, as that of a Midwestern electric firm. Administering a fleet exceeding 3,000 vehicles, including trucks, the fleet executive expects to eventually phase out most of the firm's full-size vans, totaling 400.

WAGONS AND VANS

Fleets with one or more station wagons, full-size vans or minivans

Type of Vehicle	Pct.*
Station Wagons	83
Full-size Vans	67
Minivans	30

*Total exceeds 100 percent due to multiple answers.

According to Runzheimer, the 1985 total minivan orders specified by respondents, both with and without minivans, suggest that testing is underway. Fleets have not yet moved to wholesale acceptance of this new vehicle category, the newsletter said.

Several of the "no plans to order" respondents are in a "wait-and-see" mode, as one fleet manager put it — waiting to see if minivans pass the utility and survival test, Runzheimer said.

Elsewhere, Jartran, Inc., Miami, has established a nationwide company account with General Tire & Rubber Co., Akron. Jartran, which has more than 2,000 independent dealers, spends in excess of $3 million dollars per year in tire purchases.

In addition to annual savings, this agreement will enable Jartran to use General Tire's road service and repair facilities, according to Julio Siberio, senior director of marketing for Jartran.

Lend Lease, Minneapolis, has reached an agreement with Ziebart Corp., Troy, Mich., for rust protection and other vehicle maintenance services for its fleet, according to Rich Johnson, manager of Ziebart's fleet services program.

Michael J. Phelan has been elected senior vice president of Associates Leasing, a division of Associates Commercial Corp., Chicago.

Phelan, who joined Associates in 1977, will continue to be responsible for directing the division's nationwide truck and trailer fleet leasing operations.

Ryder Systems, Inc., Miami, announced the election of Gordon J. Bingham as vice president of marketing. He was vice president - marketing service for Ryder System's Vehicle Leasing and Service Division.

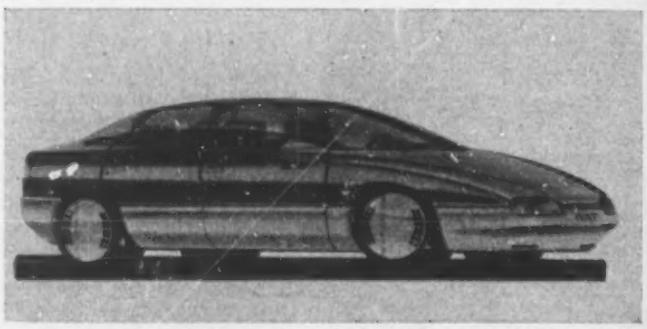
In his new position, Bingham will be responsible for directing marketing strategy formulation, research and analysis, and marketing support for various Ryder operation divisions.

Longer, higher Jaguar

RS Panels, Nuneaton, England produced this custom-built Jaguar XJ-12 limousine for the International Auto Show in Birmingham, England. The passenger compartment has been lengthened by 32 inches and headroom was increased by raising the roofline four inches. The four-passenger limo is trimmed with Connolly hide, Wilton carpet and lambswool rugs.

Luxury and agility

Aston Marin Tickford, Ltd., has transformed a Carbodies cab into a limousine. The Carbodies FX4 cab is stretched 16 inches, a tinted glass panel with sliding interior blind is fitted to the roof and the vehicle's finish is resprayed. Inside, a leather and walnut center console houses a radio/cassette player and color TV. The vehicle debuted at the International Auto Show.



Viewed in clay form

International Automotive Design, Sussex, England, exhibited a half-finished model of its concept car Arrival at the International Auto Show. The clay model weighed more than two tons. One half was finished and sprayed and the other half was raw clay, on which the firm's modelers worked during the show. The front-wheel-drive vehicle has a 2.4-liter, turbocharged power train.

Down to 290 from 305

U. S. makers offer fewer models for '85 season

Continued from Page 4

models and both are convertibles. Ragtops were added to the Alliance line. They are the first convertibles AMC has built since the '68 AMC Rebel.

Ford Motor's total dipped because of cuts in the Ford Mustang and Mercury Capri and Lynx lines. Honda now builds Accord two-doors in the U. S., and VW has one less Golf model than it had Rabbits.

GM's lineup shows the most changes. The 20-cars are the principal additions, and Pontiac Fiero will offer a new Fiero GT coupe. Buick has an extra wagon in the full-size class; there's a new top-line Oldsmobile Delta 88 sedan, and Cadillac now has a front-drive Fleetwood coupe.

The GM deletions were more extensive. The Pontiac and Oldsmobile X-cars are gone, and the model selections have been trimmed for the remaining nameplates in that class — Buick Skylark and Chevrolet Citation.

Also dropped were the rear-wheel-drive C-cars at Buick and Oldsmobile (Electra and Ninety-Eight) and the RWD Cadillac DeVilles. Production of those models ceased last spring to make way for their FWD replacements, but they were kept in the model count since they were still available in the showrooms.

When the FWD C-cars were introduced last April, they were called '85 models. They were included in the '84 tabulation because their production and sales figures were counted in the '84 model year.

Chevrolet dumped its Chevette Scooter models, and Buick eliminated four-door sedans from its Regal line.

For '85, the six domestic makers have added 30 models and dropped 45 for a net dip of 15.

• The AUTOMOTIVE NEWS model analysis includes all models the domestic manufacturers are pricing or merchandising individually. It does not include engine or transmission options.

Turbos are counted as models. It is felt that they have enough differences in trim, equipment and mechanicals to qualify for separate model designation.

The current 290 models consist of 106 four-door sedans, 133 two-doors, 13 convertibles and 38 four-door station wagons. (The two-door total includes hatchbacks, which some makers list as three-door models.)

The final count for '84 was 116 four-doors, 140 two-doors, 12 convertibles and 37 wagons.

By market class, the '85 list shows 66 subcompacts, 81 compacts, 75 intermediates, 31 standard-size cars and 37 luxury cars.

At the end of the '84 season, the 305 selections were comprised of 67 subcompacts, 82 compacts, 80 intermediates, 28 standard-size cars and 48 luxury cars.

Ford Division leads the domestic makes with 39 models for '85. Next in line are Pontiac, 38; Buick, 37; Oldsmobile, 29; Chevrolet, 25; Dodge, 25, and Mercury, 25.

Totals for other U. S. makes are: Plymouth, 14; Renault, 14; Chrysler, 13; Cadillac, 11; Lincoln, 10; Honda, 4; AMC, 3, and Volkswagen, 3.

For '84, Buick was tops with 43, followed by Ford at 42 and Pontiac at 40.

Ford Escort, with 12, and Pontiac Sunbird, with 11, are the leaders on the nameplate list for '85. There are eight models apiece for Buick Century, Renault Alliance, Dodge Aries and Plymouth Reliant and seven each for Mercury Lynx, Buick Skyhawk, Chevrolet Cavalier and Pontiac 6000.

New deal in Baltimore

BALTIMORE. — Motor Coach Sales, Ltd., has been appointed a dealership for Lotus, Avanti, Bitter and Lamborghini. Scott I. Propper is the dealer.

obituaries

Walter M. Boomershine Sr.

MARIETTA, Ga. — Walter M. Boomershine Sr., 87, died here Oct. 21. Mr. Boomershine formed Boomershine Motor Co. in 1929 to sell Oakland cars. He later changed the name of the dealership to Boomershine Pontiac. Mr. Boomershine retired in 1975.

Sir William Duncan

LONDON. — Sir William Duncan, 61, chairman and chief executive of Rolls-Royce, Ltd., died here Nov. 5. Sir William had spent most of his business career with a British chemical firm before being named chairman-designate of Rolls-Royce in 1982. He was named chairman and chief executive in April, 1983.

Effects of Canadian strike overcome

Month posts modest car-sale gain

Continued from Page 6

cent, Buick was down 8.15 percent, Cadillac was down 5.37 percent and Oldsmobile dropped 23.92 percent on a year-to-year basis.

At American Motors, Renault domestic products were down 5.44 percent and AMC dropped 21.74 percent.

• The import total included several increases and at least three records for the month. Jaguar, up 34.49 percent, said its 1,517 sales were an October record. Mercedes-Benz was up 21.35 percent to a record 6,890 from 5,678, and Saab sales of 2,898 pushed its string of consecutive record months to 31.

Audi sales doubled, October to October; BMW was up 30.89 percent; Honda imports were up 8.96 percent; Peugeot was up 52.80 percent; Nissan was up 19.79 percent, and Toyota slipped 7.44 percent.

Intermediates claimed the largest segment of the U.S. market in October, 25.89 percent. Imports were next at 23.57 percent, followed by compacts at 16.43 percent, subcompacts at 13.54 percent, standards at 11.31 percent and luxury models at 9.26 percent.

Excluding imports, the breakout was: Intermediates at 33.88 percent, compacts at 21.49 percent, subcompacts at 17.71 percent, standards at 14.80 percent and luxury cars at 12.12 percent.

In the late-October reporting period, domestic new-car sales were up 3.28 percent, to 244,659 from 236,895 last year. It was the best total for the period in five years.

Ford was up 19.09 percent, Chrysler was up 18.47 percent and Honda was up 151.47 percent for the period, while GM dipped 7.17 percent, AMC was down 8.44 percent and VW plunged 41.54 percent.

GM sales accounted for 52.89 percent of the market, Ford had 27.23 percent, Chrysler had 13.87 percent, Honda had 2.62 percent, AMC had 2.56 percent and VW had 0.83 percent.

With nine selling days in the period both years, the daily rate was up 3.28 percent, to 27,184 from 26,322.

GM reaffirms its position on fleet subsidy

Continued from Page 3

1965 U. S.-Canadian Automotive Trade Agreement is a prime example of successful industrial cooperation between two countries.

"The auto pact . . . has generated increased competition, production efficiencies, and high automotive employment in North America," he said.

"Like all such agreements, we need to make sure it fits the current competitive picture. But on a whole, it's done a good job for our countries. For our part, General Motors has great confidence in the Canadian automotive industry. In fact, Canada will continue to play an important role in GM's future."

• GM has announced plans to spend about $1 billion on a new truck program at the Oshawa (Ont.) plant that he said will include state-of-the-art technology in every operation.

McDonald also cited new investment at the St. Catharines (Ont.) foundry, where such technological advancements as computer vision robots have been installed. In addition, he said, the company has expanded its business with outside parts suppliers in Canada.

"As you know, we've also said GM of Canada is exploring the possibility of manufacturing a small passenger car designed by Suzuki in (Canada)," McDonald said. "These are only preliminary discussions and no such commitment has been made. But it illustrates our confidence in Canada and North America."

With a strong world economy and avoidance of another oil crisis, he told the Canadian dealers that new-vehicle sales may climb as high as 20 million annually in North America by the mid-1990s.

McDonald said the Japanese challenge should be met not with legislated quotas or local-content laws, but rather with a greater emphasis on customer satisfaction.

He termed the GM-Toyota joint venture and GM imports from Japanese and Korean affiliates "temporary measures." The ultimate solution to what he describes as built-in Japanese cost advantages is embodied in the corporation's clean-sheet Saturn small-car program, he said.

The Saturn Project, which will rely on new manufacturing techniques, has not been assigned a model year, but is due to come under the auspices of GM's Chevrolet-Pontiac-GM of Canada Group by the end of the year. McDonald said he recently drove the first Saturn prototype vehicle.

"The goal . . . is to discover or invent a cost-effective way to make high-quality cars here in North America," he said. "Saturn will become our answer to the problem."

In wake of Reagan's reelection

Unions face at least 4 tough years

Continued from Page 5

tions on key issues facing the country."

The Democrats won two more Senate seats, one each in Iowa and Illinois, but lost at least 14 seats in the House. Some say those results are not as bad as many inside organized labor had feared.

"The average American does not realize he has loaned out his future," Yokich said. "There is a $200 billion deficit. There is no way to cut that without raising taxes and the Democrats understand that."

• Rumblings from the Reagan Administration seem to indicate that there is a plan to cut the deficit without raising taxes — a tax reform.

One observer said he expects that the tax reform, which will come in the next two years, will require corporations to pay more taxes, will close the loopholes for those who escape paying taxes and will provide an across-the-board flat income tax rate.

If the Reagan Administration is able to do those things, the Republicans could well attract even more unionized voters in 1988. Those changes in the tax structure agree with the philosophy of many unionized workers.

Mr. Reagan is also expected to stand tough on cuts in social programs, which the UAW has traditionally supported. But again, unions have lost a lot of political clout and do not have the public support they did a few years ago.

There is another problem. According to Yokich, the young people who are traditionally Democrats are no longer looking for social programs. Instead, they are strong on patriotism and the Reagan camp has built its campaign and administration on just that.

Many Americans relate social programs to abuses and will vote against candidates who want to increase those programs. The voters feel they are shelling out too much to help those who, they believe, should be helping themselves.

• But there is another factor. The young Americans have high social and economic expectations. Their voting habits could be altered if a war, severe depression or other traumatic socio-economic events dampen those expectations.

Now, those people are almost ready for the working world and they could be in for a shock. They will likely not move up the corporate ladder as quickly as they assumed. That ladder is already filled with baby boomers who have a long time before retirement.

If this happens, there will be a lot of very unhappy, dissatisfied young people who could begin to evolve from their conservative, "me" attitude into a liberal, "us" mode. There are those who think the '60s could return.

The more liberal attitudes could cut into the Republican strength, giving the Democrats and unions more clout. The unions hope they will become popular once again as those young people organize to get what they perceive as their fair share.

• Consequently, Yokich said, four more years of Mr. Reagan and his conservative attitudes could cause a resurgence of the Democratic Party.

One way for that to happen is for another period of class warfare to develop — this time not between the working and rich classes but between the younger, expectant class and the older, established class.

The question now is, can the UAW and other unions get in touch with the political leanings of the membership? Can they deliver the vote when they endorse a candidate? Can they afford to spend money that it takes to actively support candidates, given their dwindling membership?

"The (1984) election was a kick in the teeth to organized labor," said one observer. "Maybe it is not good to be the labor candidate."

The UAW disagrees. According to Bieber, Mr. Reagan won on personal popularity and "amazing political luck."

"The pendulum swings of American politics are very great," Bieber said. "We have survived the dark periods of the past, and we will survive and eventually prevail despite the temporary setback represented by the 1984 election."

We shall see.

GM shareholders to get dividend of Class E stock

DETROIT. — General Motors declared a fourth-quarter dividend of $1.25 per share as well as a stock dividend of one share of its new Class E common stock for every 20 shares of GM common stock.

The $1.25 cash dividend maintains the amount that has been paid for the past two quarters and is up from the $1 per share paid in the fourth quarter last year.

Cash will be paid in lieu of fractional shares for the stock dividend and will be based on the average market price of the Class E common stock during the first five trading days after the Dec. 10 payments. Checks will be mailed the week before Christmas. The Class E common was issued for the acquisition of Electronic Data Services Corp.

The EDS stock was off to a soaring start. When trading on the stock began Oct. 19, it opened at $36.50 per share. Within a week, it hit $47 a share, leaving GM and analysts baffled as they had predicted little trading in the stock. Their explanation was the stock was volatile since it was thinly traded.

GM also declared the first quarterly dividend of 9 cents per share on the new Class E common stock.

Directors OK purchase of 10 million Ford shares

DEARBORN. — Ford Motor Co.'s board of directors has authorized the purchase of up to 10 million shares of its stock.

Purchase of shares would be made from time to time depending on market conditions and would be used for various corporate purposes, said John Sagan, vice president-treasurer. Goldman, Sachs & Co. is the agent for Ford's purchases.

Status of probes listed by NHTSA

Continued from Page 5

1982-84 front-wheel-drive A-cars.

NHTSA also announced formal investigations into: Rear brakes on 1981-83 GM X-bodies with both manual and automatic transmissions; alleged failure of hatchback door support mechanisms on 1979-80 Plymouth Horizons and Dodge Omnis; the same alleged defect for 1979-80 Ford Mustangs and Mercury Capris; alleged lack of power brake assist on 1980 GM X-bodies, and alleged rear-brake lockup on 1979 Ford Mustangs and Mercury Capris.

'29 Mercedes-Benz returns to Vatican

Pope John Paul II receives a 1929 Mercedes-Benz Nuerburg sedan from Daimler-Benz Board of Management member Hans-Juergen Hinrichs. The car, built for Pope Pius XI, was returned to the Vatican following a 16-month restoration in the Daimler-Benz museum workshop in Stuttgart, West Germany.

After four quarterly increases

U.S. dealer census shows a decline

Continued from Page 3

1, 1983, when the '84 selling season began.

This compared with a loss of 80 in the '83 model year and was the first upturn in the 22 years that AUTOMOTIVE NEWS has compiled census numbers on a model-year basis.

Prior to '83, the model-year losses had been heavy for the last few sessions. The industry lost 1,267 domestic-car dealerships in the '82 model year, 758 in '81 and 1,643 in '80.

• The ups and downs of the '84 model year found advances of 164 outlets for Chrysler Corp. and 80 for Ford Motor and slips of 86 for AMC-Renault, 75 for GM and 14 for Volkswagen. Factoring in the change in the number of intercorporate duals resulted in a gain of 46 for the domestic industry.

Franchise totals grew during the model year for every make except AMC, Chevrolet and VW.

The greatest growth was achieved by the Chrysler Corp. makes with increases of 186 franchises for Dodge, 182 for Plymouth and 172 for Chrysler.

All three Ford Motor lines were also up: 84 for Mercury, 79 for Ford and 39 for Lincoln. At GM, Pontiac added 50 franchises; Oldsmobile, 35; Buick, 30, and Cadillac, 10.

Renault was up seven, but AMC was down 33. Elsewhere, Chevrolet was off 15 franchises for the model year, and VW was off 14.

Chrysler Corp. had 3,962 car dealers on Oct. 1, an increase of 164 over the 3,798 it had a year earlier. The upturn was about the same as the 169 outlets Chrysler added in the 1983 model year.

The corporation has increased its dealer total for eight consecutive quarters.

Franchise totals on Oct. 1 were: Chrysler, 2,996; Plymouth, 2,947, and Dodge car, 2,864.

In addition to its 3,962 car dealerships, Chrysler Corp. has seven that handle only Dodge trucks. They are not included in the corporation's car-dealership total or in the Dodge car-franchise total.

Ford Motor Co. posted a gain of 80 car dealerships in the '84 model year and has increased its total for six straight quarters. The Oct. 1 figure was 5,534, compared with 5,454 a year ago.

Franchise totals are: Ford, 4,705; Mercury, 2,721, and Lincoln, 1,569.

There are 112 dealerships that handle only Ford heavy-duty trucks. They are not included in the Ford Motor car-dealership total or in the Ford Division car-franchise total.

GM had 9,985 car dealerships as the '84 model year began, down from 10,060 a year earlier. The loss of 75 compares with a dip of 170 in the '83 model year and was GM's lightest since '78.

The 9,985 total is something of a reverse milestone for GM. It's the first time the count has been below 10,000 since it passed that figure on the way up many, many decades ago. The 10,000 mark probably was reached in the 1920s; GM had 17,000 dealers at the beginning of World War II.

The corporate total is still over 10,000 when GMC truck outlets are included. The overall figure, with GMC, is 10,605.

Car-franchise counts on Oct. 1 were: Chevrolet, 5,135; Oldsmobile, 3,195; Pontiac, 3,010; Buick, 2,970, and Cadillac, 1,605.

On Oct. 1, the AMC-Renault dealership total was 1,468, a decline of 86 from the 1,554 at the beginning of the '83 model year.

Franchise totals were 1,393 for AMC and 1,336 for Renault.

U. S. FRANCHISES

	Oct. 1, 1984	Oct. 1, 1983

About 1,260 outlets handle both makes.

AMC has about 740 duals with Big Three makes and about 90 percent of them also handle Renault. About half of the 72 AMC-VW combinations also have the Renault franchise.

Volkswagen had 896 dealers on Oct. 1, a dip of 14 for the '84 model year. VW has an estimated 150 duals with other makes of U. S. cars.

Ford and UAW sign tentative pact in Canada

Continued from Page 4

Consumer Price Index with 1981 as the base. It had been one cent for every 0.26 percentage-point rise on a 1969 base.

Of the $3.44 an hour COLA, $2.99 was added into the base rate initially. Another 20 cents an hour will be rolled in in each of the following two years for a total of $3.39 per hour.

There is a one-cent per hour COLA diversion per quarter back to the company in the first nine quarters and two cents in the next two quarters.

• The contract also provides an income security program which basically tracks the GM agreement and provides workers with 10 years' or more seniority with an additional 52 weeks of income benefits once they have exhausted their Supplemental Unemployment Benefits of 104 weeks. The program is funded at $20 million.

Workers at Ford will be getting more paid-time off than those at GM. Workers with less than 10 years' seniority will get 2½ paid absence allowance days per year. Those with 10-15 years' seniority will get five days. Workers at GM get 2½ days across the board. The workers can also opt to take the benefit in cash with the payment on the hourly base rate.

There are also increases in pensions and a prepaid legal services program. Ford's contribution to the SUB fund was increased, as were Sickness and Accident and Extended Disability Benefits.

In addition, the company will be penalized for excessive overtime.

51-day inventory of domestic autos on Nov. 1

Car supply falls to 12-month low

Continued from Page 3

levels of standard-size cars built by everyone but GM. The sole reason is increased production. Sales of those cars have increased across the board compared with Oct. 1 levels and are two to four times the rate of Nov. 1, 1983. But production has increased even more.

Subcompacts accounted for 22.69 percent of new U. S.-car stocks on Nov. 1; compacts, for 25.12 percent; intermediates, for 27.52 percent; standard-size cars, for 15.75 percent, and luxury models, for 8.92 percent.

One month earlier, the shares were: Subcompact, 21.35 percent; compact, 25.23 percent; intermediate, 28.56 percent; standard, 15.49 percent, and luxury, 9.37 percent.

There was a 65-day supply of subcompacts on Nov. 1.

The subcompacts and their days' supplies were: Ohio-built Honda Accords, 7; Fiero, 47; VW, 47 (some of those were Golfs, which weren't yet on sale during October; the Nov. 1 supply of Rabbits was only 35 days); Escort, 61; Chevette, 64; Lynx, 66, and Charger, 73.

Also, Turismo, 76; Omni, 77; Pontiac 1000, 81; Alliance, 89; Horizon, 94; Encore, 96; Daytona, 100; EXP, 103, and Laser, 104.

There was a 59-day supply of compacts, broken out this way: Mustang, 45; Topaz, 45; Cavalier, 46; Cimarron, 53; Skyhawk, 57; Tempo, 58; Aries, 62; LeBaron, 62; 2000 Sunbird, 62; Firenza, 64; Reliant, 66; Firebird, 73; Eagle, 84; Camaro, 92, and Capri, 100.

• There was a 41-day supply of intermediates: Cutlass Ciera, 26; Cutlass Supreme, 26; Pontiac 6000, 26; Century, 29; Omega, 32; Celebrity, 34; Grand Am, 34; Regal, 35; Skylark, 37; Grand Prix, 39; Bonneville, 40; Monte Carlo, 43; Cougar, 45; LTD, 45; Marquis, 54; Somerset Regal, 58; Thunderbird, 58; Caravelle, 59; Dodge 600, 63; Phoenix, 63; New Yorker E and E-Class, 66; Citation, 22, and Calais, 93.

There was a 54-day supply of standard-size cars: Oldsmobile 88, 30; LeSabre, 39; Chevrolet, 51; Parisienne, 61; Grand Marquis, 74; Crown Victoria, 76; Diplomat, 89, and Gran Fury, 92.

There was a 37-day supply of luxury cars: Cadillac, 19; Electra, 22; Oldsmobile Ninety-Eight, 23; Riviera, 31; Lincoln, 39; Seville, 40; Eldorado, 44; Toronado, 48; Fifth Avenue, 55; Corvette, 60; Continental, 85, and Mark VII, 111.

Happy birthday, T-bird

The Ford Thunderbird celebrates its 30th anniversary today (Nov. 12). Ford designer William P. Boyer, above, was lead stylist on the original 1955 two-seater T-bird and had a hand in designing today's Thunderbirds, including the 30th Anniversary Edition.

AMC says Kenosha's future depends on labor costs

Continued from Page 5

other U. S. makers have a broad line of products.

AMC will enter the intermediate-size market in the 1988 model year when it begins building its new mid-size cars at a $587-million assembly plant in Brampton, Ont. AMC already has an older facility in Brampton which builds the Eagle. A company spokesman said the company plans to continue to run both operations.

AMC also will introduce a new pickup truck to its Toledo plant for the 1986 model year and will import the Espace van and the Alpine sports car from Renault, its marriage partner, also for the 1986 model year.

In addition, the AMC/Renault partnership builds Jeeps in Mexico City and has an engine plant in Toluca, Mexico. And Renault began building the Alliance in Ciudadsahagun, Mexico, last fall. Stampings are provided by the Kenosha operation. The Ciudadsahagun plant also builds the Renault R5 and 18i (known as the 18 in Mexico).

These new-product plans have led to speculation that AMC will close the Kenosha plant because of its non-competitiveness.

Besides paying higher wages, AMC says the plant is not competitive in work rules and has eight times more union stewards than the industry average. AMC has one steward for every 23 workers while Ford has one for every 193 and General Motors has one for every 169.

AMC has been asking the UAW to reduce the number of stewards and it reecntly told the local union that if it cut the number in half, everyone in the plant would get a 25-cent-an-hour raise. The union refused.

According to Kuzel, the higher ratio was an evolutionary process in which part-time stewards gradually became full-time stewards. And, he said, stewards at AMC take care of a lot of things supervisors take care of at the Big Three.

While some sources say AMC is pressuring the union to begin talks early in an effort to cut down on labor costs, a company spokesman said there are no plans to begin negotiating early. But, he said, the union does not have to wait until September to make moves to become more competitive.

• According to one source, the company is seeking more than $2 an hour in concessions from the workers, fewer job classifications and fewer stewards.

The knowledge of AMC's non-competitiveness at its Kenosha operation has scared civic leaders in the city. Cletus Willems, an attorney and head of the Greater Kenosha Development Corp., wrote an editorial for the local newspaper asking the union and the company to try and work out the problem.

He said it believes AMC is getting ready to pull out of Kenosha. AMC is the biggest employer in Wisconsin and the city.

A copy of that editorial was sent to local AMC officials as a courtesy and to check for errors, Willems confirmed.

He said he is organizing a task force to analyze the problems at the plant. The group will be made up of objective people in Kenosha who are not connected with either the company or the union.

The mayor of Kenosha, John Bilotti, is also concerned. He wrote a letter to AMC asking for a meeting with the director of operations at the Kenosha plant. That meeting was held last Wednesday (Nov. 7), the day the letter was received.

According to Willems, the problem must be worked out in a triumvirate made up of labor, government and the company.

AMC has already said it will phase out rear-wheel-drive axle production in Kenosha next year and that it will close the forging operations there. It also plans to transfer its warranty parts inspection department to Detroit.

Bertone, after Bricklin split, to name several 'importers'

NEW YORK.—Details on the Bertone effort to garner a portion of the U. S. sports-car market are emerging slowly, as the company structures its importing operation after parting with Malcolm Bricklin.

A spokesman for the Italian auto maker confirmed that Western International, Inc., a Houston-based company headed by Don Ross, was named "an importer," but there will be several other importers for other areas of the country.

Bertone decided to go with four to six regional importers, he said. He would not identify the other importers.

Bricklin's International Automobile Importers, Inc., had been the sole importer, and had several distributors.

There is reason to believe these distributors will become importers for Bertone, according to several sources. The Bertone spokesman refused to identify anyone involved in these transactions.

He did say the contracts have been signed.

The new system will allow the price of the Bertone sports car to be lowered, making the cars more competitive, he said.

The Bertone spokesman agreed with Bricklin's characterization of the parting as "friendly."

Bertone is hoping to increase sales of its car, although the spokesman would not project any figures.

Canadian firepower bolstered by Ford

WINDSOR, Ont. — Attacks against the competition take more subtle forms in this modern era, but Ford of Canada's casting plant here nevertheless was busy last week turning out cannons.

Twenty cast-iron cannons are being reproduced for a replica of the HMS Detroit Ford is helping to build. The Detroit was a British flagship during the War of 1812.

Nissan reports 15 pct. rise in 6-month income

TOKYO. — Nissan Motor Co., Ltd., reported a gain of more than 15.7-percent in income for the six months ended Sept. 30.

Nissan's net income amounted to 41.6 billion yen, or $173 million dollars at current exchange rates, compared with last year's 36.0 billion yen.

Net sales for the six months were up 7.9 percent at 1,816.5 billion yen, or $7.6 billion at current exchange rates, compared with last year's 1,683.7 billion yen.

Unit sales were off 2.2 percent. Passenger-car sales were down in Japan's home market but up in the export segment. The reverse was true of the commercial vehicles. Kit cars, vehicles with 50 percent Japanese content sent overseas for final assembly, were off 1.4 percent.

Cimarron up $357; equipment added

DETROIT. — Cadillac has added standard equipment to its Cimarron four-door sedan and has raised the price $357 for '85. The new sticker is $12,962.

Cadillac said the additional standard equipment is valued at $1,029. It consists of power windows, six-way power seat, power door locks, power antenna, power trunk-lid release, tilt steering wheel and cruise control.

Ford to pay extra dividend, its first since '73

DEARBORN. — Ford Motor Co. declared an extra dividend of 50 cents a share. The dividend is payable Jan. 3 to shareholders of record on Nov. 30.

The extra dividend payment is in addition to the regular 40-cent dividend to be paid on Dec. 1.

Ford Chairman Philip Caldwell and President Donald E. Petersen, who replaces Caldwell as chairman in February, said the one-time extra dividend payment is based on the company's unique circumstances during the last several years.

It is only the fourth extra dividend payment made since the company went public in 1955; the last was in 1973. The extra dividend increases total 1984 dividends to $2 a share.

But production slips below year-ago month

October output highest since May

By Louise Kertesz
Detroit Reporter

October production of 707,130 cars was the best since May's 724,837 and 30.33 percent better than September's 542,585. But last month's total was off 1.53 percent from the year-ago month's 717,972.

Makers targeted completion of 177,569 cars last week, an increase of 18.20 percent over the previous week's 150,234, when General Motors plants were resuming operation after the Canadian strike.

Though estimates had been optimistic, the previous week's output was the third lowest since mid-July.

Last week's projected total of 177,569 was 12.22 percent better than the year-ago week's 158,-233.

Last week's estimated production was shared as follows: GM, 57.79 percent; Ford Motor Co., 21.40 percent; Chrysler Corp., 15.04 percent; American Motors, 2.70 percent; American Honda, 2.06 percent, and Volkswagen of America, 1.01 percent.

GM scheduled two overtime shifts Saturday (Nov. 10) at the following plants: Detroit, Flint (Buick G-Line), Framingham (Mass.), Lansing (Plant 1), Oklahoma City, Willow Run (Mich.) and Wilmington (Del.).

GM plants in Lansing (Plant 2) and Orion (Mich.) worked one shift Saturday.

American Honda's plant in Marysville, O., also worked Saturday.

DeLorean ad asks readers to chip in on defense fund

Former auto maker John Z. DeLorean is taking to the lecture circuit and appealing to the public through newspaper advertising to tell his story and raise funds for his defense.

A defense fund to help defray legal expenses has been established and a full-page ad asking for money ran in the Los Angeles Herald Examiner last week.

Under the banner: "It's a Horror Story!", the ad, which DeLorean, reportedly helped write, reiterates his position taken during the cocaine trial that the government is out to get DeLorean. DeLorean ultimately was acquitted of the drug charges.

The ad asks for money to help in DeLorean's defense in Detroit.

DeLorean Motor Co. has filed for Chapter 7 liquidation in Federal Bankruptcy Court in Detroit. At the same time, a federal grand jury in Detroit is investigating alleged criminal tax fraud and bankruptcy fraud, sources have said. Of particular interest is the disappearance of the nearly $18 million which was to be used for developing the DeLorean automobile.

Suzi Cozad, a publicist who also worked on the ad, said the ad campaign may go national, though no decision has been finalized.

The advertisement was sponsored by the American Civil Economic Liberties Assn., a group described as being similar to the American Civil Liberties Union except it is concerned with "economic liberty" rather than civil liberties.

Though no contract has been signed, DeLorean is the scheduled guest speaker at Schoolcraft College in the Detroit suburb of Livonia Nov. 27, according to Schoolcraft spokesman Pat Newman. DeLorean's topic will be FBI surveillance of business people.

Tickets for the lecture, designed to be a fundraiser for Schoolcraft College, range from $5.50 to $8. A $25-per-person reception and a $275-per-person dinner will follow his lecture.

DeLorean will receive $12,000 for his talk.

Bendix to phase out South Bend operation

SOUTH BEND.—The Bendix Chassis and Brake Components Division of Allied Corp. intends to phase out its automotive manufacturing operations here by the end of 1986.

South Bend will continue to be the unit's administrative, marketing, and engineering center. Products currently produced at South Bend will be produced in other Allied facilities or purchased outside.

October output highest of year for truck makers

Assembling 291,754 units in October, U. S. truck makers had their best month this year and their best October since 1978, when 364,473 trucks were built.

Last month's output was 23.23 percent better than September's 236,756 and 18.66 percent above the year-ago month's 245,866.

Makers slated completion of 68,118 trucks last week, the highest weekly total this year, topping the 66,834 units for the week ended June 23.

Targeted output last week was 7.43 percent better than the previous week's 63,407 and 17.62 percent higher than the year-ago week's 57,914.

Two overtime shifts were scheduled for Saturday (Nov. 10) at the following General Motors plants: Janesville (Wis.), Lordstown (O.), and Pontiac (No. 5 and 6). The Detroit plant is scheduled to work one shift Saturday.

Ford Motor Co.'s Michigan Truck plant in Wayne (Mich.) is also scheduled to work Saturday.

Year's top week puts Canada over 900,000-car mark

Canadian car production topped 900,000 last week, four weeks ahead of last year.

And despite the General Motors strike, Canadian truck makers recorded their best October ever, with completion of 65,485 units.

Canadian car makers again expected their best week of the year last week, targeting assembly of 25,402 units.

That record was up 17.58 percent from the previous week's 21,612, which fell short of the projected high because GM plants could not resume at full speed after the strike ended.

October car production of 81,-585 units was up 15.99 percent from September's 70,335 and a bit ahead of last October's 80,-716.

Last week's output of 17,067 trucks was up slightly (0.95 percent) from the previous week's 16,906 and 50.94 percent better than the year-ago week's 11,307.

Annual production of T-115s at Chrysler Corp.'s Windsor (Ont.) plant has topped 200,000. Last week's output of 2,040 Plymouth Voyagers, 2,055 Dodge Caravans and 605 Mini Ram Vans brought this year's total to 202,489.

Spectrum bows

Spectrum, made by Isuzu in Japan and handled by Chevrolet dealers in 16 East Coast states and the District of Columbia, goes on sale this week. Spectrum is available as a two-door hatchback or the four-door notchback sedan shown here. Story, more pictures on Page 20.

U.C. rule to help buyers but won't burden dealers

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The major thrust of the final used-car rule announced by the FTC is to disclose who pays for repairs after the sale, the dealer or the consumer.

The effective date is May, 1985 — almost exactly 10 years since the start of an industry-wide investigation to find out if used-car dealers used false and deceptive practices in advertising and promoting sales of cars, warranties and service contracts.

It is also about 9½ years after FTC first proposed a sticker that would inform buyers of such things as some history of a car's use and work done by a dealer costing more than $100. Eventually, a window sticker of "known defects" for dealer checkoff was proposed and this ignited widespread dealer opposition.

This absolutely final rule — after some tinkering by FTC for NADA to certify warranty responsibility — asks the Second Circuit Court to dismiss the case brought by NADA (August, 1981) when Wendell Miller, a Syracuse dealer was president of NADA. Since the controversial "known-defect" section is gone, dismissal is expected.

Next May, used cars sold by used-car dealers — both franchised new-car dealers selling used cars and independent dealers but not individual citizens — must contain a Buyers Guide on the side window with the following data:

1. A statement of the terms of any warranty offered.

2. A prominent statement of whether the dealer is selling the car "as is" and, if so, that the consumer must pay for repairs after the sale.

3. A warning that spoken promises are difficult to enforce, coupled with a suggestion to get all promises in writing and a statement advising the buyer to keep the window sticker for reference after the sale.

4. A suggestion that the consumer ask for an independent inspection of the car.

5. An identification on the back of the window sticker of the major mechanical and safety systems of the car, including a list of some major defects that may occur in used cars.

6. Information about the availability of any service contracts.

• The FTC vote — which was one commissioner short because of the Oct. 15 departure of former Chairman Michael Pertschuk—was three to one.

Frank E. McCarthy, NADA executive vice president, said, "NADA is encouraged that the final used-car rule provides consumers with useful information without imposing unreasonable burdens on dealers.

"The decision by the FTC to eliminate the previously pro-

Assistant Managing Editor

The supply of new imported cars at dealerships and ports held steady at 24 days on Nov. 1, although the actual stockpile rose to the highest level since Aug. 1, as Chevrolet began shipping the new Isuzu-built Spectrum to its East Coast dealers in anticipation of its mid-November launch.

There were 186,567 imported cars in inventory as November opened, compared with 179,171 a month earlier and 217,965 a year earlier. The new Spectrums accounted for roughly 3,500 of the Nov. 1 total; if they hadn't been included in the import-car total, the stockpile of all imported cars would have been equal to a 23-day supply.

The stockpile of cars has been in the same range — 23 to 25 days' worth — since June 1, with sales increasing and decreasing along with availability.

There was a 41½-day supply of imported trucks in inventory on Nov. 1, or 87,756 units. One month earlier, there was a 39-day supply, or 78,770 units; one year earlier, a 58-day supply, or 70,778 units.

Led by Toyota, import-truck sales shot up during the month, but shipments more than kept pace.

Some of the days-supply figures for cars bear explaining. For example, Honda, Nissan and Toyota numbers are quite similar to their Oct. 1 figures. But all three saw sales skyrocketing during October; to keep their days-supply levels steady, their shipments kept pace.

On the flip side of the coin, Subaru's sales fell by a third because of shortages; its inventory was nearly halved, too, resulting in only a one-day difference in supply.

Chrysler Corp.'s days-supply figures for its Mitsubishi-built cars fell dramatically because of sales increases.

During the month, the stockpile of all Japanese cars increased by only a few hundred units over and above the Spectrum increase. There was an 18-day supply of Japanese cars — 17 without Spectrum — compared with a 19-day supply a month earlier and a 24-day supply a year earlier.

The increase in Volkswagen's supply of imported cars was mainly attributable to a 50-percent increase in inventories for the launch of its new Jetta; however, its October cleanout-period sales were lower than those of the previous month, also adding to its inventory.

Porsche's inventory was esti-

Eastern area eyed; decision expected in 6 months

Isuzu ponders U. S. truck plant

By Jake Kelderman
Washington Reporter

WASHINGTON. — U. S. auto makers, already facing stiff competition from the Japanese in the passenger-car market, are about to see that competition spread to their last stronghold, the light- and medium-truck market.

According to informed sources, Isuzu Motors, Ltd., will construct a truck plant in the Eastern U. S.

Isuzu, a truck-making powerhouse in Japan, began selling Class 3 commercial trucks in the U. S. in September through a U. S. subsidiary of its auto-distribution arm, and is slowly building a dealer network here.

Thus far, it has moved about 250 of its KS diesel-powered models which Isuzu says, unlike the domestic counterparts, are constructed as trucks rather than "modifications of van chassis."

Class 3 trucks are used primarily for in-city delivery purposes. Industry analysts predict that the in-city commercial-truck market will continue to grow steadily through the end of the decade.

• Jack Dawson, Isuzu Truck national sales manager, said Isuzu will sell more than 1,000 KS trucks in the U. S. in 1985, and that if it weren't for production constraints at the single home plant in Japan, it could sell even more.

"They can make only 100,000 there and it's always a fight for a bigger allotment," he said.

Sources say Isuzu has been studying the feasibility of putting up a truck plant in the U. S. for about two years and that it has narrowed the location to the Mid-Atlantic states, with a final decision due within six months.

Currently, Isuzu Truck of America has outlets in 18 states, primarily in the East, South and West.

Isuzu, which is 34.2 percent owned by General Motors, already supplies GM with a Class 6 medium truck, and sources indicate that Isuzu's move to build in the U. S. comes with the "encouragement" of that company.

Since January of this year, Isuzu has supplied GM with 2,350 Class 6 Chevrolet Tiltmaster and GMC Forward cabover-type trucks, about 350 more units than it had planned on for the whole year. By 1986, fully two years ahead of projections, Isuzu plans to supply as many as 5,000 units annually to the GM divisions.

breaking news

New-car sales increase forecast

ANN ARBOR, Mich.—U. S. auto sales will continue to climb for the next two years, peaking in mid-1986 and then leveling off, according to a new forecast released by the University of Michigan. U-M Economist Saul H. Hymans said lower interest will cause new-car sales to increase from an annual rate of 10.3 million this quarter to 10.6 million at the end of 1985 and to 10.8 million by mid-1986 and then remain at that rate for the balance of 1986.

Avanti convertible stickered at $45,900

SOUTH BEND. — The Avanti convertible will have a suggested retail price of $45,900 when it is publicly introduced Jan. 25. It will feature some body changes to update styling, according to Steven H. Blake, chief executive officer of Avanti Motor Corp. The new Avanti GT will follow in mid-1985 as an '86 model, Blake said.

Workers bemoan lack of contract

2nd shift to be added for Chrysler H-cars

By Marjorie Sorge
Labor Editor

STERLING HEIGHTS, Mich. — Chrysler Corp. has been making the Chrysler LeBaron GTS and the Dodge Lancer H-cars for about six weeks, but the workers at the assembly plant here are unhappy — they don't have a labor agreement.

There are currently about 2,000 hourly workers at the Sterling Heights plant working one shift. A second shift, which will employ about 1,700, will be added in the first quarter of 1985.

According to Chrysler Chairman Lee A. Iacocca, Chrysler plans to recall all its indefinitely laid-off workers in the Detroit area to fill the shift and then start hiring off the street for the first time in years.

At the official presentation of the new cars last week, Iacocca drove a Dodge Lancer ES while UAW Vice President Marc Stepp drove a LeBaron GTS through mist and flashing lights to a podium for their remarks.

During the preview, some of the UAW officials attending the ceremonies were introduced, and some workers booed. While both Iacocca and Stepp were met with standing ovations and cheers, the cheering was not as loud for Stepp.

Workers interviewed later said they were unhappy working without a contract. The major sticking point in the talks is the number of job classifications at the plant. Chrysler wants three skilled trades and three production classifications, which the UAW finds unacceptable. There are traditionally an average of 125 job classifications in an assembly plant.

• Talks have been held off and on since the summer of 1983 but have become more intense since the plant began operating in late September.

According to Robert Jensen, administrative assistant to Stepp, director of the UAW's Chrysler department, the union did not want to begin intense bargaining until the plant began operations and all the workers involved were working.

About two-thirds of the workers come from closed Chrysler plants and have been out of work in an assembly plant for the last five years, Jensen said.

"They are coming in cold, and haven't seen the changes in assembly plants," he said. "They have not been here to evolve with those changes."

In the past five years, assembly plants, and other automotive plants, have become increasingly more technical, requiring more skills and more duplication of jobs. The workforce at the new Sterling Heights plant received more than 900,000 man hours of training prior to the launch.

The second shift will also be trained. It will also allow Chrysler to call back all indefinitely laid-off workers in the Detroit area. There are currently about 3,000, of whom 500 are skilled trades people and will be needed for the second shift.

Chrysler estimates that only 900 to 1,100 of the remaining 2,500 are still available for the second shift. Jobs will also be offered to Chrysler workers laid off in other parts of the country, but the company does not expect many of those people to move. After all those avenues are exhausted, Chrysler will begin hiring from the street.

• The new Sterling Heights plant cost Chrysler $650 million to modernize. The company is leasing it with option to buy from Volkswagen.

Chrysler has spent $7.5 billion in new product development during the last five years and plans to boost that to $10 billion in the next five years, Iacocca said. All that investment will be in America, he said.

He told the workers attending the preview, "I want you to see what Chrysler Corp. is doing with its obscene profits." The UAW has referred to corporate profits as obscene.

Chrysler expects to make a record $2.5 billion this year.

Sterling Heights is building the new front-wheel-drive Chrysler LeBaron GTS and Dodge Lancer five-door sports sedans at a rate of 60 an hour. They are geared "to the baby boomers who once went nuts over the Mustang," Iacocca said.

Some are even referring to the models as the "yuppie car," he said.

The plant has 97 body-welding robots, 72 materials-handling robots and 162 lasers and laser cameras. The paint shop is so clean it could be rented out at night for surgery, Iacocca joked. He said the new technology allows the company to paint twice as many cars as it did five years ago with the same amount of paint.

By 1988, all Chrysler plants will look like this one, he said.

"This doesn't look like smokestack America because it's not," Iacocca said, pointing to the single smokestack above the Sterling Heights plant. "Notice that single stack. That is the future."

Stepp also praised the new plant and encouraged the workers to strive for quality.

"Make a car you can be proud to own and drive and others will be proud to own and drive," he said.

New Alfa wagon by Pininfarina

Alfa Romeo has added this front-wheel-drive station wagon, the Giardinetta, to its Alfa 33 line for 1985. The 1-5-liter engine is a new option. Pininfarina also produces a 4WD sedan and wagon for the 33 range.

B-W may sell share of Dutch CVT maker

By Richard Feast
European Editor

TURIN, Italy. — The belief that Borg-Warner is pulling its 24-percent stake out of the troubled Van Doorne Transmissie Co. throws further gloom on future production plans for the CVT automatic gearbox.

The wall of silence on the subject at the auto show here masked a period of intense activity behind the scenes by the shareholders.

An attempt by one of VDT's Dutch bankers, AMRO, to withdraw credit lines was resisted by VDT. It was followed shortly afterwards by moves by one of VDT's West German component suppliers to put the company in liquidation.

A Nov. 9 meeting of shareholders heard that efforts by the Dutch Department of Economic Affairs to solve the problems with a flying visit to Borg-Warner's U. S. headquarters had come to naught.

Borg-Warner is said to have offered its share for sale — not for the first time — at a price which made other shareholders blanch.

"Borg-Warner has offered its shares for sale, but the price is not being made public because we're in the midst of negotiating," according to a company spokesperson in Chicago.

VDT's financial and production difficulties have been described recently by Automotive News. In addition to Borg-Warner, its shares are now distributed to Fiat Auto (24 percent), the Dutch state (12.5 percent) and Volvo Car BV of Holland (39.5 percent). Volvo Car is owned 70 percent by minority holding.

Vittorio Ghidella, Fiat Auto managing director, said in Turin last week, "Borg-Warner is anxious to pull out. On the other hand, we are keen to press ahead. We don't intend to abandon this program."

The future direction of VDT was being discussed secretly last week. Among the options are for Fiat or Volvo (or both) to purchase Borg-Warner's stake. As well as being expensive, this course will still require additional working capital to turn VDT from a research organization to a production one.

Other outside possibilities must be for Ford Motor Co. and General Motors to take up a financial involvement in the Dutch company. Both are committed to producing various types of CVTs — Ford is to supply Fiat from its Bordeaux (France) factory — using key components from VDT. But neither Ford nor GM has so far put any money directly into VDT.

The original plan was for Ford and Fiat vehicles with CVT to go into production last summer, followed one year later by GM through its Strasbourg factory. All programs are now at least one year behind schedule.

NHTSA asks Ford for a truck recall

WASHINGTON. — NHTSA has sent a letter asking Ford to recall 1977-81 F-350 and E-350 trucks and vans with dual rear wheels because cone nits fail to hold dual rear wheel assemblies.

UAW to ask Chrysler to reopen labor pact

By Marjorie Sorge
Labor Editor

UAW officials met last week to plan strategy for seeking a reopening of the current Chrysler Corp.-UAW labor agreement, according to UAW Vice President Marc Stepp.

Stepp, director of the UAW's Chrysler Department, and UAW President Owen Bieber were scheduled to meet late last week to formulate strategy, and Stepp indicated that a letter asking the company to reopen the agreement would be sent soon. The contract expires Oct. 15, 1985.

The union will be "displeased" if the corporation refuses to reopen in light of the expected record profit of $2.5 billion for 1985, Stepp said.

"When the workers see that, they'll discuss it across the lunch table and I'm sure they will say, 'Why not me?'" he said. "The profits should be shared with the workers."

Chrysler Chairman Lee A. Iacocca said the current agreement will cost $1.2 billion before it expires and he is really not interested in reopening.

"Our contract, which runs out Oct. 15 (1985), is pretty good and we'd like to run it out until then," he said.

The UAW has been threatening to send a letter to Chrysler for about two months, but the reopening request was put on the back burner until new agreements were reached with General Motors and Ford and until similar negotiations were completed in Canada.

• The union wants to get Chrysler "back on pattern with Ford and GM and would like to have the contracts expire the same day with basically the same wages and benefits. The new Ford and GM contracts expire Sept. 14, 1987.

Chrysler workers currently

No decision on importing Renault R-25, Dedeurwaerder says

AMC to replace Eagle, move its assembly site

By Richard Johnson
Detroit Reporter

A replacement is coming for American Motors' aging four-wheel-drive passenger car, the Eagle, but not for at least three years, according to AMC President and Chief Executive Officer Jose Dedeurwaerder.

The company's next 4WD automobile will be built somewhere other than the small Canadian plant where the Eagle is assembled. The old plant in Brampton, Ont., is scheduled to be phased out when Eagle production is halted.

In an interview with Automotive News, Dedeurwaerder said styling has been completed for an intermediate model to be built at the new Brampton facility now under construction. The AMC president also said no decision has been made yet on whether to import the Renault R-25 sedan.

The demise of the Eagle has been expected for some time, but Dedeurwaerder insisted that it won't happen any time soon. The basic body style was introduced in 1969 as the 1970 AMC Hornet and was later used for the Spirit and Concord models.

"It is not the most modern styling in the world, as we know, but we are selling 20,000 Eagles a year and there is no reason for us to change our strategy on the Eagle," he said.

"Later on down the road, it is sure that we will stay in the 4WD passenger-car segment of the business. So, automatically, we will have a replacement, but we will give our dealers and our customers a valuable replacement."

• Dedeurwaerder said the Eagle enjoys a good reputation and is drawing a growing number of female customers who, he said, are looking for safety and se-

More bad news for U. S. workers

Study eyes impact of auto layoffs

By Jake Kelderman
Washington Reporter

WASHINGTON.—A new study commissioned by the Commerce Department does not have good news for U. S. auto workers who have lost their jobs.

According to the study, those workers can expect to take as much as a 30-percent cut in real earnings; they stand a good chance (41 percent) of losing employer-paid health insurance, and they stand an even better chance (56 percent) of losing employer-paid pensions and life insurance.

"Life in the high-technology world of tomorrow will not necessarily be one of ease and contentment for everyone," said Boston College economist Barry Bluestone.

Bluestone and some colleagues are finishing work on a survey of Michigan auto workers and the impact auto industry layoffs have had on them.

The study is expected to be completed at the end of the year but preliminary results indicate that the retraining programs touted by the UAW and General Motors in their recent contract settlement will do little to cushion the impact of losing a job in the premier manufacturing segment of the U. S. economy.

Part of the problem lies in the fact that auto workers are paid as well as they are, Bluestone said, but "we've also found that retraining works for only a very small number of laid-off workers because skills are not necessarily transferable," he said.

Furthermore, jobs are not being created in the manufacturing segment to keep pace with those being lost in manufacturing, Bluestone said. In fact, the new jobs that have been created have been disproportionately in industries that pay lower wages and usually offer less adequate benefits, he said.

Bennett Harrison, an economist at the Massachusetts Institute of Technology, has found that employment of production workers in the U. S. has fallen by 7 percent in manufacturing since 1973, and that in the recovery of 1982-84 job growth in just wholesale and retailing was greater than the job growth in all of manufacturing, including high-tech.

In July of this year, the average manufacturing wage for production workers was $370 a week, Harrison said. In the service sector, the average weekly wage was $248. In other words, it takes 150 service jobs to make up in earnings from the loss of 100 typical manufacturing jobs, he said.

Displaced auto workers who have largely ended up in service-type jobs have tried to cope with this new reality by having spouses take jobs and/or taking on second jobs themselves, Bluestone said, but the frequent need to relocate, learn new skills and adjust lifestyles has taken its physical and emotional toll.

Bluestone recently participated in a debate on U. S. industrial policy on the lack thereof with Harrison; Charles Schultze, chairman of the Council of Economic Advisers in the Carter Administration, and Robert Lawrence, a senior fellow with the Brookings Institution.

Bluestone thinks the auto workers' plight is symptomatic of the possible fate of many workers in the manufacturing segment of the U. S. economy as those industries automate to try to stay competiitve.

Along with Harrison, Bluestone thinks the public must soon address the problem of what to do about those structural changes and the impact they have on economic growth and quality of life.

The UAW, which cooperated in the Boston College study, had no comment.

Mark VII dressed to the nines

Interior designer Rick Repko has created a series of six custom-designed, limited-edition Lincoln Continentals, Town Cars and Mark VIIs. They were introduced at the Hartford Civic Center by Moriarty Brothers Lincoln-Mercury-Mazda. Here, Repko displays a black on black Mark VII with all trim removed, graphic striping, six front driving lights and charcoal perforated leather interior with scarlet accents.

NHTSA program involves crashing 40 1985 models

WASHINGTON. — NHTSA plans to crash 40 '85 models as part of its New Car Assessment Program.

They will be crashed at 35 MPH into a fixed barrier—or at about one-third more force than that used for compliance with the occupant-protection standard.

But also, NHTSA will also use a different type of crash for 10 additional vehicles—to be selected from a list of 30—and use a moving barrier intended to better assess the role of vehicle weight and structure in protecting occupants. The moving barrier idea has been under development for at least 10 years.

Thus the Reagan Administration continues crashing cars and publicizing single-car crashes. The auto companies have raised questions about these crashes but they seem to have learned techniques that have improved their cars' responses.

The crash program was started in 1979 by then Safety Chief Joan Claybrook as a way to meet one requirement of a 1972 law that ordered comparison by makes and models for protecting occupants in crashes.

Federal agencies to use retreads

PEBBLE BEACH, Calif.—White House officials may be riding in limos using retreaded tires.

In an effort to help cut the waste in Federal spending, Congress has passed legislation requiring federal agencies to establish procurement guidelines for greater use of retreaded tires on Federal Government vehicles. According to the Tire Retread Information Bureau, buying retreads saves oil as well as money.

Early-month new-car sales suffer post-strike hangover

By Jenny L. King
Staff Writer

Early-November domestic new-car sales, still hampered by the September and October strikes against General Motors, slipped 10,000 units below their year-ago level.

The year-to-date total surpassed the number of cars delivered for the entire 1983 calendar year and was up 19.43 percent over year-to-date 1983 sales.

The Nov. 1-10 total was 188,775, down 4.72 percent from 198,126 last year. Year-to-date domestic sales numbered 6,978,928, up 19.43 percent from 5,843,480 a year earlier. Total sales in 1983 were 6,795,302.

GM, down 14.30 percent for the Nov. 1-10 period, left the competitive domestics with a deficit they couldn't fill, although Ford Motor Co. sales were up 8.35 percent and Chrysler reported an 18.37-percent increase.

GM dropped to 103,075 from 120,278 last year. Ford climbed to 51,988 from 47,982 and Chrysler was up to 25,168 from 21,263.

American Motors reported a sales estimate of 4,200 for early November, down 14.29 percent from 4,900 a year ago. Volkswagen plunged 61.79 percent, to 637 from 1,667, and Honda was up 82.07 percent, to 3,707 from 2,036.

GM's share of the early November domestic market slipped more than 6 percentage points, to 54.60 percent from 60.71 percent. Ford was up to 27.54 percent from 24.22 percent. Chrysler was up to 13.33 percent from 10.73 percent and Honda grew to 1.96 percent from 1.03 percent.

AMC's sales drop cost it a small slice of the market, the company dropping to 2.23 percent from 2.47 percent. VW skidded to its smallest penetration of the calendar year, to 0.34 percent from 0.84 percent last year.

All five GM makes missed their year-ago sales levels, with drops ranging from 1.11 percent for Pontiac to 33.38 percent for Cadillac. Buick was down 11.56 percent, Oldsmobile was down 15.02 percent and Chevrolet was down 15.90 percent.

Plymouth, strengthened by the addition of the intermediate front-drive Caravelle to its lineup, was up 26.65 percent. Chrysler sales were up 18.18 percent and Dodge was up 12.50 percent.

At Ford Motor Co., Ford was up 17.18 percent, Mercury was up 8.27 percent and Lincoln reported an impressive 46.89-percent sales increase.

American Motors' Renault sales dipped 5 percent and AMC was down 55.56 percent.

With nine selling days in the period this year and last, the daily rate was down 4.72 percent, to 20,975 from 22,014.

Peugeot Quasar to visit U. S. shows

TURIN. — The Peugeot Quasar, the wild mid-engined four-wheel-drive sports car first exhibited at the Paris Auto Show, is to make a tour of U. S. auto shows. Peugeot's Jean DeRampe says it will appear at Los Angeles, Jan. 5-13; New York, Jan. 26-Feb. 3, and Chicago, Feb. 9-17.

4WD Porsche 959 due next year

STUTTGART.—The Porsche 959—the first Porsche with four-wheel-drive—is scheduled to go into production next year with an anticipated price of $122,000. Porsche is expected to build at least 200 of the cars under homologation rules. The 959 is based on the Porsche 911, a design that is 17 years old.

Giugiaro to branch out from autos

TURIN.—Men's wear and accessories styled by Giugiaro will go on sale in Italy next spring under the Giugiaro Uomo name. Designs for women's clothes are expected to follow a bit later.

DeLorean appeal works

LOS ANGELES.—John Z. DeLorean's public appeal for help to defray his legal expenses, in the form of an ad in the Los Angeles Herald Examiner, was deemed successful enough to expand into a campaign. The ad agency has asked several major newspapers for low rates given non-profit organizations.

Chevrolet paying cash incentive on 2 truck engines

WARREN, Mich. — Chevrolet kicked off two new cash incentives, covering 6.2-liter diesel and 2.5-liter gasoline-engine truck models.

The "6.2 liter Diesel Days" program runs from Nov. 12 to Feb. 11 and covers '84/'85 pickups equipped with 6.2-liter diesel engines.

Dealers get $400 credit when they order the units and $300 when they retail them. Sales managers also get $50 per retail sale, and salespeople get $100 per retail sale.

The second program is called "Tech IV cash in." It covers the 2.5-liter engine which is standard on S-10 pickups and S-Blazers.

The program also runs from Nov. 12 to Feb. 11.

It pays dealers $200, sales managers $50 and salespersons $100 for every retail sale. Fleet orders qualify for the payments as well.

Cellular phones to be subject of dumping probe

WASHINGTON. — Cellular mobile telephones now available for use in motor vehicles in many U. S. cities, will be the subject of a U. S. International Trade Commission anti-dumping investigation.

The commission launched a preliminary investigation against the Japanese mobile phone industry this month in response to a petition from Motorola, Inc.

Motorola contends the Japanese are selling their cellular telephone equipment in the U. S. at less than fair market value, to the detriment of the American cellular telephone industry.

The preliminary investigation is to be completed by Dec. 20.

New model year off to fast start for second straight year

October sales up 36.7 pct. over '83

October retail sales of new trucks of all types in the U.S. were up dramatically over last year, getting the model year off to a rousing start for the second straight year.

Sales also were significantly higher this year in all three major market segments.

In the first month of the '85 model year, according to preliminary factory reports, franchised dealers and factory outlets retailed 365,022 vehicles, an increase of 36.7 percent over the year earlier 267,103 units.

Retailers moved 338,713 light trucks during the month, a gain of 35.6 percent over the year-earlier 249,812 units. Mediums were 58.4 percent higher, 6,093 versus 3,846. Heavies were up 50.4 percent, from 13,445 a year ago to 20,216.

Ten-month sales totaled 3,439,490 units, an increase of 34.8 percent over the previous year's 2,551,506. Again, there were sizeable gains in the three market areas.

Light-truck sales over the 10-month period were up 33.9 percent to 3,208,727 units, compared with 2,396,313 a year ago. Mediums totaled 50,362, a gain of 23.2 percent over last year's 40,868. Heavies were up 57.8 percent, from 114,325 in 1983 to 180,401.

• Sales of compact trucks in October totaled 148,111 units, up 67.3 percent from the 88,547 vehicles retailed in the first month of the '84 model year. They represented 40.6 percent of the month's industry sales.

In the January-October period, 1,434,478 new small trucks were sold, an increase of 55.8 percent over last year's 920,433. The compacts accounted for 41.7 percent of the total for the 10 months.

October sales of the domestic compacts were up 74.1 percent to 98,830 units, compared with 56,761 a year ago, and they represented 66.7 percent of the small-truck total. The imports were up 55 percent, from 31,786 in 1983 to 49,281.

Through October, the domestics accounted for 65.1 percent of the industry count with 933,820 sales, an increase of 76.8 percent over the 528,107 units retailed in the same period a year ago.

Ten-month sales of the im-

Curcio to be keynoter at SAE truck meeting

DETROIT. — John B. Curcio, president, Mack Trucks, Inc., will be the keynote speaker at the 10th annual SAE Truck & Bus Meeting Dec. 3-6 at the Hyatt Regency Hotel in Dearborn.

He will speak on The Driving Force of Innovation at the opening session of the four-day program, whose theme will be Innovation Unlimited.

J. B. Curcio

More than 20 half-day sessions will be devoted to such topics as electronics, brakes, drivetrains and bus and light-truck operation. More than 45 exhibitors will display the latest technology for trucks and buses in the event's largest exposition ever.

The traditional Blue Ribbon Panel, set for Wednesday, Dec. 5, will feature four industry executives who will address the marketing of new and emerging truck technologies.

Edson P. Williams, Ford Motor Co. Truck Operations general manager, will be the panel moderator. He also is general chairman of the annual meeting.

The panelists will be Neil A. Springer, president, International Harvester Truck Group; George May, president, Gelco Leasing, representing motor-carriers operations; Ludvik Koci, Detroit Diesel Allison Division, general manager, representing components suppliers, and Joseph Campana, marketing vice president, Chrysler Corp., representing light-truck manufacturers.

• Philip Caldwell, chairman, Ford Motor Co., will be the principal speaker at the annual banquet Wednesday, Dec. 5, and Williams will be the toastmaster.

New to the program will be the Chief Engineers Panel, featuring six executives who will discuss the Engineers' Vision of the Future.

Panelists will be Daniel L. Rivard, light-duty product development manager, Ford Motor Co.; William B. Smyth, senior vice president, Freightliner Corp.; R. R. Treadway, chief engineer-commercial vehicles, GM Truck & Bus Group.

Also, Paul A. Turvill, general manager, PACCAR, Inc., Technical Center; Edward T. Mabley, heavy-truck product development manager, Ford Motor Co., Truck Operations, and Leslie Meacock, product engineering director, Mack Trucks, Inc.

ElDorado reports increase in sales, but profits are off

MINNEAPOLIS, Kans. — ElDorado Motor Corp. sales in the first fiscal quarter ended Sept. 30 totaled $12.7 million, up 13.4 percent from last year's opening quarter, according to Robert L. Stewart, president.

But he said chassis shortages during the period caused the firm to switch to a less profitable product mix. Thus, net earnings amounted to $174,000, down 33.8 percent from the year-ago $263,000.

Stewart noted that the chassis shortage is easing, and that the RV/small-bus industry expects the supply to return to normal in the first three months of 1985.

He added that ElDorado anticipates second-quarter results will exceed those in the first quarter. "Continued improvement throughout the year would lead to record fiscal 1985 sales and earnings," Stewart said.

Coachmen's Stout named chairman of RVIA's board

CHANTILLY, Va. — Gene Stout, executive vice president, Coachmen Industries, Inc., has been elected chairman of the Recreation Vehicle Industry Assn. He has been a director since 1982 and had served previously as first vice chairman.

Other new officers of RVIA's board are John Casey, president, Shurflo/Shurton, first vice chairman, and Don Cuzzocrea, president, Starcraft R.V., new second vice chairman.

Warren Jones, president, Hehr International, Inc., was re-elected treasurer, and Bill Doyle, president, Western Recreational Vehicles, Inc., is the new secretary.

These five officers, as well as the immediate past chairman, Norman Jacobson, vice president, Contempo Enterprises, and David J. Humphreys, RVIA president and general counsel, will serve as the Executive Committee for one year.

Stout, Casey and Doyle were among nine industry representatives elected or re-elected to RVIA's board earlier. Also re-elected were Dick Matz, marketing manager, Norcold, division of Stolle Corp.; George Jackson, chairman and director of marketing, Hydro Flame, and Al Yoder, executive vice president, Jayco, Inc.

Newly elected members are Scott Chapman, president, Bivouac Industries, Inc.; Stephen Decker, president, Skamper Corp., and Jack Cole, president, Lance Camper Mfg. Corp.

Fiesta Mini Camper called a first

The Fiesta Mini Camper is the first complete camper conversion of the compact Toyota Van, according to Vehicle Concepts Corp., Bristol, Ind. One of the main features is the pop-up top, which the converter said provides 6-foot, 1-inch headroom when raised.

Winnebago '84 sales, profits hit new highs

FOREST CITY, Ia. — Record earnings and sales have been reported by Winnebago Industries, Inc., for its fiscal 1984 year ended Aug. 25.

Net earnings for the year totaled $27,817,000, up 76.7 percent over net earnings of $15,737,000 in fiscal 1983. Sales amounted to $410,974,000, exceeding by 71.8 percent the record sales of $239,265,000 in fiscal 1983.

Net earnings for the fourth quarter were the highest for any in company history at $10,536,000. This was an increase of 61.6 percent over net earnings of $6,521,000 for the same period in fiscal 1983.

Fourth-quarter sales of $122,132,000 were 56.4 percent higher than last year's $78,070,000 in the same quarter.

According to Ronald E. Haugen, Winnebago president, the record sales can be attributed to continuing high retail demand for motor homes and favorable economic conditions.

"Also contributing to our record sales was excellent consumer acceptance of our line of front-wheel-drive vehicles achieving fuel efficiencies of 22 MPG and a new line of Elandan and Windcruiser motor homes brought to market in the spring of 1984," he added. Haugen said "another major factor was a new national retail finance plan which enables retail customers to obtain loans at interest rates of 1½ percentage points below normal rates and with terms as long as 12 years."

While the higher sales volume was primarily responsible for the improvement in earn-

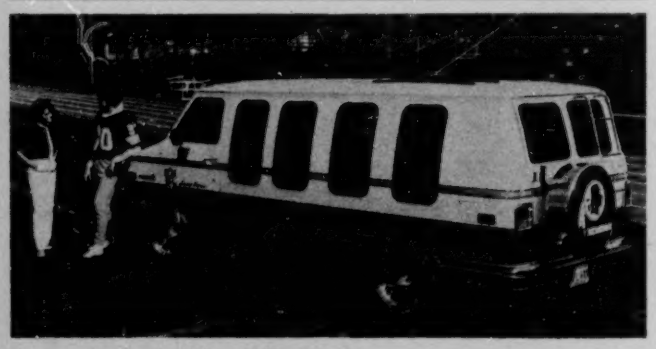
Sportscoach recalling 5,983 big motor homes

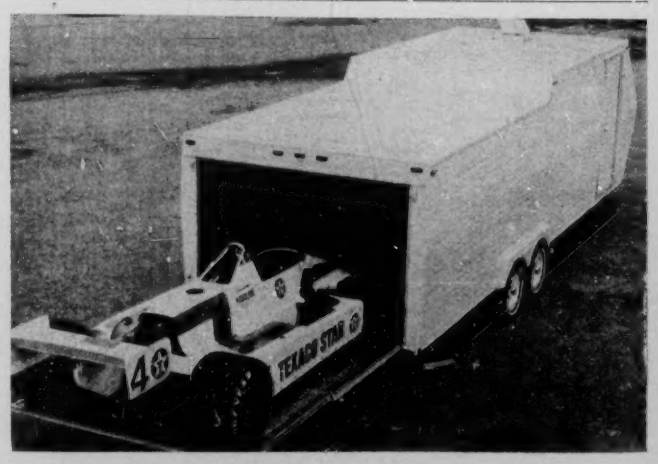
WASHINGTON. — Sportscoach Corp. of America, Middlebury, Ind., is recalling 5,983 1981-through-1984-model Class A motor homes to fix fasteners holding auxiliary fuel tanks.

NHTSA said it has one report of an accident in which the 45-gallon tank dislodged from the motor home and fractured. There have been no reports of injuries.



Vans designed for NFL fans

Geneva Luxury Motor Vans, Lake Geneva, Wis., has been named exclusive manufacturer of NFL "Fan Vans" by O'Neill Enterprises, Ltd., the licensee of NFL Properties, Inc. The vans are trimmed in the 28 NFL football teams' colors, logos and striping.



Auto racer's custom trailer

Lil' Cat, Inc., Elkhart, Ind., manufacturer of specialty and cargo trailers, produced this 24-foot custom trailer for Tom Sneva, Indianapolis 500 champion. Features include tapered front and rear roof, electric jack and winch, four leveling jackstands, full carpeting and a double-hinged fold-down door that serves as an entry ramp and display platform.

New model year off to fast start for second straight year

October sales up 36.7 pct. over '83

Continued from Page 16

ported small trucks were up 27.6 percent to 500,658 units, compared with 392,326 in the comparable period in 1983.

The number of unsold new trucks in retailers' hands at the end of the month was 31 percent higher than a year ago—748,472 versus 571,404 — and there were sizeable increases in the three market segments.

Light trucks were up 28.5 percent, from 536,433 units last year to 689,436. There were 13,456 mediums on hand on Nov. 1, a gain of 64.8 percent over the year-earlier 8,164. Heavies totaled 45,580 units, up 70 percent from last year's 26,807.

• Big Three truck dealers retailed 282,491 new vehicles in October, a gain of 21 percent over the year-ago 218,960. The 10-month total was up 28.7 percent to 2,645,086 units, compared with 2,055,172 in 1983.

During the month, Ford dealers sold 110,444 trucks, an increase of 21.8 percent over last year's 90,670. Through October, the count was 986,306 units, up 22.1 percent from the year-earlier 808,016.

Ford outsold Chevrolet by almost 12,000 units in October, boosting its 10-month lead to about 40,000.

Chevrolet dealers retailed 98,803 vehicles during the month, 20.3 percent higher than last year's 82,126. The total through October was 946,330, an increase of 17.2 percent over the year-ago 805,900 units.

Small vans accounted for almost 40 percent of the 45,746 trucks retailed by Dodge and Plymouth dealers in October, a gain of 94.4 percent over last year's 23,530. The 10-month count was up 96.8 percent, from 222,834 units last year to 438,549.

GMC dealers sold 27,498 vehicles during the month, up 21.5 percent from the year-ago 22,634. Through October, the total was 273,901, an increase of 25.4 percent over the 218,422 retailed in the like period last year.

• October sales of Jeep four-wheel-drive vehicles were 78.3 percent higher than last year, 14,382 versus 8,066. Dealers retailed 124,745 units through October, an increase of 103.9 percent over last year's 61,173.

Only two of the discontinued Volkswagen front-wheel-drive compact pickups were sold during the month, compared with 271 a year ago. The 10-month total was 389, versus 4,581 in the like period in 1983.

Sales of the non-captive Japanese distributors' trucks were significantly higher in October than a year ago.

Toyota dealers sold 19,936 compact vehicles during the month, a gain of 116.3 percent over last year's 9,215. The total through October was 215,629, up 53.2 percent from the 140,722 retailed in the like period a year ago.

Nissan/Datsun October sales were up 101.8 percent to 16,046 units, compared with 7,204 in the same month last year. Dealers retailed 170,077 units in the January-October period, up 46.8 percent from the year-earlier 115,891.

Included in the month's Nissan/Datsun total were 7,898 trucks assembled at the Tennessee plant. The 10-month count also included 78,118 of these vehicles.

Mazda compact-truck sales during the month were up 33.1 percent, from 7,204 a year ago to 9,586. The total through October was 100,647, an increase of 69.4 percent over the year-earlier 59,428.

Isuzu dealers retailed 3,897 new compact vehicles in October, an increase of 44.4 percent over the previous year's 2,699. The 10-month total was up 73.1 percent to 35,615 units, compared with 20,572 in the like period in 1983.

In October, 2,155 small trucks were retailed by Mitsubishi dealers, a gain of 129.7 percent over last year's 938 units. The total in the January-October period was up 92.7 percent, from 7,101 units a year ago to 13,686.

Nissan Laurel offered with in-line or V-6 engine

To serve one market—purchaser GM Holden's—and appeal to another—buyers who remember the Prince Motors cars—the Nissan Laurel is offered with an in-line or a V-6 engine. The Skyline model will be introduced in 1985.

Nissan Laurel's two sixes serve marketing purposes

TOKYO. — Both in-line and V-6 engines of the same size are being offered in Nissan's rebodied Laurel, one of its two-liter passenger cars built principally for domestic sale.

The reasons: Recent agreements between competing manufacturers and the Skyline model to be introduced next year. Nissan will sell the in-line six-cylinder to General Motors Holden's in Australia beginning next year, and the V-6 engine will give Nissan a unique engine in the two-three liter class.

The Laurel and Skyline were produced by Prince Motors before the merger with Nissan and older buyers will remember the distinctive sporty image of the Prince cars of the 1960s.

In addition, Nissan will introduce a four-valve head for the new Skyline's in-line unit. One of the most popular Skyline models was offered with such an engine many years ago.

The new Laurel has a long flat hood, with a large upright grille, and overall lines are square, unlike the curved lines of the old model.

• Although the new car looks tall, there is hardly any more headroom than before, and once the sliding roof has been installed, headroom is distinctly limited.

One innovation is rack and pinion steering.

For performance, some Laurels are equipped with the turbocharged V-6 two-liter unit, which develops 170 BHP.

The new in-line six, claimed to be smooth and responsive, is cheaper to produce than the V-6.

Nissan has cut some corners in the design stage by following the design of the V-6 closely.

The new in-line engine is rated at 130 BHP (JIS) at 5,600 RPM, and maximum torque is 133 pounds-feet at 4,000 RPM. Although the power outputs of both engines are the same, the in-line develops a few more pounds-feet of torque. However, it is 15 pounds heavier than the V-6.

Nissan intends to sell 10,000 Laurels a month in Japan, an ambitious target, since the old model has been averaging 4,000 units a month.

Collector car auction slated for Nov. 24

NEWPORT BEACH, Calif. — More than 400 collector cars from every era and in every price category will be auctioned on Saturday, Nov. 24, and Sunday, Nov. 25, at the Newport Beach Marriott Hotel. Special exhibits of limited-production automobiles will also be featured.

The public preview is Friday, Nov. 23, from 1 p.m. to 7 p.m. On Saturday and Sunday, the gates will be open from 8:30 a.m. to 7 p.m. with the auction beginning at 10 a.m.

Calif. lawmakers slate hearings on fleet subsidies

SACRAMENTO.—The 1983-84 session of the California Legislature will adjourn at midnight Nov. 30 and the 1985-86 session will convene Dec. 3.

Before the start of the new session, the Senate Committee on Transportation will begin public hearings on legislation sponsored by California's automobile dealer associations which would prohibit auto manufacturers from selling vehicles to any person or fleet at a price lower than that at which they sell to their franchised dealers for resale to the public.

Prior to its final recess, the legislature adopted and Gov. George Deukmejian signed into law (effective July 1, 1985) a bill co-sponsored by auto dealers and the Western Vehicle Leasing Assn. which removes conflicts between state and federal law.

The new law will allow service contracts to be disclosed with the lease contract and also authorizes a conditional sales contract to disclose the dealer's and the state's smog certification fees as separate items below the total cash price for the vehicle.

Another new law, effective immediately, requires notice to a vehicle buyer whenever the manufacturer of a vehicle is different than the engine manufacturer. The notice may be by means of a label, window sticker, sales literature or sales contract.

Chrysler promotes Burkhart in St. Louis

ST. LOUIS. — John B. Burkart, manager of Chrysler Corp.'s Plant I here, has been promoted to direct the St. Louis Assembly Complex. He will continue as manager of Plant I.

As director of the St. Louis complex, Burkart succeeds Allen F. Scudder, who has retired after 27 years with Chrysler.

Turbo boost for Pontiac Sunbird

Turbo boost is what's new with the '85 Pontiac Sunbird. The 1.8-liter, four-cylinder, overhead cam turbo engine with multi-port fuel injection turns 150 HP at 5,600 RPM with 150 pounds-feet of torque at 2,800 RPM.

Toyota has no new plans to build plant outside Japan

TOKYO.—When Hideo Kamio, Toyota vice president, was asked in Birmingham, England, recently about the possibility of Toyota following Nissan in building a plant in the UK, he gave newsmen the impression that a feasibility study was underway.

In actuality, he was referring to a theoretical situation when he said that a volume of around 100,000 units a year could be economic in the UK.

Within hours, Toyota Motor Corp. in Tokyo had announced that there was no truth in the news stories at all. "Toyota is not (currently) thinking of anything specific in that area," the company said.

Indeed, on the day the controversial statement was being made in Birmingham, Shoichiro Toyoda, in an exclusive interview with Automotive News, said that NUMMI, the joint venture with General Motors in the U. S., was the only major plant that Toyota would be involved in anywhere in the world in this decade.

The scale of operations will increase in some local assembly plants, but he indicated that Toyota still has no wish to manufacture outside Japan unless the cards are stacked in its favor, as they are in the NUMMI deal.

And August market share is down 4 points

Import registrations decline 4 pct.

By Jenny L. King
Staff Writer

Registrations of new imported cars dipped 4.31 percent in August compared with the same month a year earlier. The import share of the total U. S. market also was off, although its 26.74-percent share was the largest for any month so far this year.

R. L. Polk & Co. registrations information showed the August import total at 227,758, down 4.31 percent from 238,012 in 1983. Penetration dropped to 26.74 percent from 30.78 percent.

Of the 10 strongest imports, Honda had the most spectacular gain in market share August to August, up 4.42 percentage points to 19.67 percent from 15.25 percent of the import total. Mazda was up 0.47 percentage points; Volkswagen was up 0.37 percentage points, and Audi gained 0.04 percentage points.

In figuring its totals, Polk counts all Hondas and all VW products as imports.

Mercedes-Benz suffered the worst setback for the month, down 1.08 percentage points, to 1.77 percent from 2.85 percent. The company's U. S. new-car sales were damaged by a seven-week metalworkers' strike early in the summer.

Ten imports claimed 90.27 percent of the August market, up from 88.13 percent a year ago.

Import registrations for the first eight months of 1984 were up a scant 0.23 percent from the preceding year, to 1,650,289 from 1,646,463. Their market penetration skidded 3.91 percentage points, to 24.37 percent from 28.28 percent, as domestic sales continued to grow at a faster pace.

Again, it was Honda that enjoyed the greatest growth in penetration of the import market, up 3.80 percentage points, to 19.49 percent from 15.69 percent and moving into second place from third.

First-place Toyota dropped 2.73 percentage points and third-place Nissan was down 2.43 percentage points. Mazda dropped 0.55 percentage points and Subaru was down 0.20 percentage points.

The five major European imports were up from 1983 share of the market: VW gained 1.08 percentage points, Volvo was up 0.29 percentage points, Mercedes was up 0.07 percentage points, Audi was up 0.97 percentage points and BMW gained 0.50 percentage points.

Ten imports captured 89.91 percent of the market, up 0.80 percentage points from 89.11 percent a year ago.

• Japan was the source of 75.97 percent of this year's August imports, down from 76.47 percent 12 months earlier. German cars were a distant second, with 9.24 percent of the total. U. S.-built imports had 8.20 percent and Swedish cars represented 4.66 percent. "U. S.-built imports" is Polk's term for U. S.-built Hondas and Volkswagens.

Numbers of cars from the exporting countries included:

	August, 1984	August, 1983
Japan	173,022	182,016
W. Germany	21,050	25,056
United States	18,671	12,647
Sweden	10,623	11,007
France	2,761	4,982
Italy	805	731
Great Britain	801	1,434
Ireland	25	139
TOTAL	227,758	238,012

For the first eight months of 1984, Japanese penetration of the import market dropped sharply, to 71.36 percent from 77.16 percent last year. German-built cars were up to 12.81 percent from 10.25 percent and U. S.-built imports rose to 8.11 percent from 4.59 percent.

Import numbers and their countries of origin for January through August, 1984 vs. 1983 were as follows:

	8 Mos., 1984	8 Mos., 1983
Japan	1,177,952	1,270,404
W. Germany	211,341	168,772
United States	133,895	75,627
Sweden	90,502	81,041
France	20,916	32,923
Great Britain	11,111	10,225
Italy	4,304	6,863
Ireland	268	608
TOTAL	1,650,289	1,646,463

New imported trucks were up 31.17 percent in August, to 68,084 from 51,907 a year earlier. Totals from the major makers were:

	August, 1984	August, 1983
Toyota	29,310	19,042
Nissan	15,574	15,725
Mazda	10,345	6,797
Dodge Ram 50	4,634	3,440
Others	8,221	6,903
TOTAL	68,084	51,907

Imported truck registrations for the first eight months of 1984 were up 53.46 percent from the year-ago level, climbing to 476,240 from 310,345. The breakout:

	8 Mos., 1984	8 Mos., 1983
Toyota	180,705	109,037
Nissan	131,415	84,178
Mazda	75,531	43,269
Dodge Ram 50	29,089	18,797
Others	59,500	55,064
TOTAL	476,240	310,345

NHTSA corrosion test rule issued for semi-sealed bulbs

WASHINGTON.—NHTSA has issued a final rule on the corrosion test procedure for semi-sealed replaceable bulb lighting systems. Ford Motor Co. and other auto manufacturers interested in using contoured lighting systems worked with NHTSA to develop the final test.

A Ford spokesman said both the initial and replacement costs of semi-sealed lighting systems make the use of contoured or aerodynamic lamps more attractive to auto makers.

To replace a fully sealed aerodynamic headlamp assembly on certain vehicles could prove too expensive from a servicing standpoint, he said. Semi-sealed systems simply require a bulb change, rather than the complete replacement of the bulb, lens and reflector.

The corrosion test calls for the complete semi-sealed lighting assembly to be exposed to a salt spray or fog for 10 days. During the 24th hour of each day, the spray is turned off and the bulb may be removed. The bulb is then replaced and the spray reactivated for the next 23-hour period.

At the end of 240 hours, the device is to be tested for a drop in voltage reaching the bulb through the connector. The loss of protective coatings covering lamp components is also to be measured.

The NHTSA rule also will allow motorcycles to be equipped with semi-sealed lighting.

Denver experiment involves carless days for drivers

DENVER. — When it is winter in the Rockies, those majestic peaks are not always visible in this mile-high city and so Denver last week began a radical experiment in pollution-control technology, a carless day for every driver in the area.

Denver, unlike most metropolitan areas, has smog attacks in the winter rather than the summer, as cold air from the neighboring Rocky Mountains pours down on the city and traps rising warm air. The resulting haze often reduces visibility to as little as half a mile and puts residents in "unhealthy" air for two or three days per week during the winter.

Under the Clean Air Act, the city must reduce carbon monoxide emissions, one of the major sources of the "brown cloud," by 15 percent by 1987 if it is to keep from losing millions in federal aid for sewers and highways.

The carless day is one part of the pollution-reduction plan. The voluntary program — it could become mandatory if it does not work — is based on license-plate numbers and asks owners of vehicles with plates ending in 0 or 1 to leave their cars at home on Monday; those with plates ending in 2 or 3 to leave theirs home on Tuesday, and so on.

Tagged "No-drive," the program will last from November through January and is being launched with a $200,000 advertising campaign.

Norway exports more auto parts

OSLO. — Export of Norwegian-made automotive components is expected to exceed $117 million this year.

In the first six months, such exports ran 40 percent ahead of year-earlier volume.

Volvo and Saab in Sweden account for more than half of all Norwegian car components export. Norwegian parts are also purchased by Volkswagen, BMW and Daimler-Benz, making Germany the second largest such export market. Sales there have risen 27 percent this year.

Used-car rule: Help without burden

Continued from Page 1

posed ambiguous and confusing language regarding defect disclosure will make this rule much easier for both dealers and customers to understand.

"While we would have preferred to avoid the paperwork burden which this rule will place on dealers, we are pleased that the FTC decided to make its final rule reasonable."

Republican Commissioner Patricia P. Bailey said the final rule "without the known-defects provision, is little more than a consumer education campaign masquerading as significant, industrywide regulation."

She added: "The record in this proceeding portrays an industry fraught with dealer deception and insufficient consumer information regarding auto defects, both of which keep consumers at a substantial bargaining disadvantage in the used-car sales transaction."

Bailey said she feels the "known defects" disclosure "would have attacked these problems head on, increasing consumer awareness of total car costs . . ." but the final rule while, having educational value, "curiously avoids simply requiring dealers to share with consumers defect information they have obtained in the ordinary course of their business."

• The focus of the recent comment period was on a baseline study done for FTC's Bureau of Consumer Protection in 1979-80 to survey results of used-car sales in Wisconsin, which requires dealers to inspect used cars and to disclose known defects.

The Wisconsin attorney general and the attorneys general of Texas, Alaska, Michigan, New Mexico, Ohio, Hawaii, Maine and North Carolina plus Consumers Union and the Center for Auto Safety have questioned the study's validity.

The study's findings were supported, however, by various auto trade associations, NADA and several state dealer associations.

The study indicates "known defects" disclosure "simply does not work" because it shows "virtually no difference between the experience of used-car buyers in Wisconsin and the rest of the country . . ."

For example, only 3 percent of Wisconsin buyers were told of a problem by the dealer compared with 4 percent in the rest of the country.

While some opined this was because cars were in better shape in Wisconsin — perhaps because dealers fixed them because of expected consumer reaction — the study showed otherwise, said the FTC Bureau of Consumer Protection.

In fact, it showed the mechanical condition of cars sold in Wisconsin was worse and 65 percent of the state's used-car buyers made repairs during the survey period compared with 60 percent in the rest of the country.

The FTC bureau said "perhaps the most significant finding" of the study is that Wisconsin consumers are no more satisfied with their used cars—84 percent compared with 86 percent satisfied in the rest of the country and 12 percent in Wisconsin very dissatisfied compared with 5 percent in the rest of the country.

• Although questions of methodology were raised repeatedly both last July by two commissioners and often since by state attorneys general and consumer groups, there was never any real question of the study's findings being accepted — especially since the NADA suit had remanded the "known defects" issue to FTC which had little reason to resist either legally or philosophically.

NADA raised other questions about the watered-down proposal of last July and it won some and lost some.

NADA wanted to exclude demos, but the FTC's answer was no.

NADA wanted the "spoken promises" language entirely dropped, or if not, then changed to "can lead to misunderstanding." FTC said no, it is important that consumers know oral promises are not enforceable, especially for "as is" sales.

NADA wanted to be sure "as is" referred only to mechanical items. Answer: All right.

NADA was successful in getting changes in the "service contract" provision on grounds that there might be several service contracts available, some not handled by dealers themselves. NADA wanted — and got — general language telling buyers to ask for details.

NADA was rebuffed on minor changes — definition of consumer, size of label, inclusion of various systems that *may* have problems and permission to include options and accessories on the buyers label. But NADA won on using the Vehicle Identification Number instead of the ID and FTC will allow use of the dealer stock number as well.

• In response to NADA's complaint that posting a Spanish version of the sticker when the sale is conducted in Spanish would burden dealers, FTC said it would not since it applies only when the sale is being conducted in Spanish anyway.

Mercedes-Benz of North America, concerned about possible confusion where the dealer is selling a car which is still under the manufacturer's original warranty, won its point and FTC will allow additional use of that information.

The National Vehicle Leasing Assn. wanted specific exclusion of those who sell at auction or other non-retail settings.

FTC rejected this, noting that dealers are defined as those who have sold or offered for sale five or more used cars in the previous 12 months and the rule specifically excludes banks, financial institutions, a business selling a used vehicle to an employe, or lessors selling a leased vehicle to that vehicle's lessee or to an employe of the lessee.

The intention is a "retail sales environment" and instead of making exclusions in the rule, FTC prefers to grant exemptions when petitioned and only when necessary.

FTC also turned down changes suggested by Consumers Union for "known defect" disclosure — one that would have made clear that the dealer had no "legal obligation to inspect" and another section about allowing inspection by an independent mechanic — again saying the dealer had no "duty" to inspect.

Koepke Motors wins Volvo award

LAKEWOOD, O. — Robert J. Koepke, Koepke Motor Sales Co. here, has received the Dealer of Excellence award for "outstanding professional achievement and dedicated service to Volvo customers."

Robert J. Koepke

The dealership was cited for the accomplishments of its sales, service and parts departments. Each was judged as outstanding in its 1983 performance.

Koepke Motor Sales Co. has a staff of 32 people and has been a Volvo dealership since April, 1981.

College withdraws invitation to DeLorean

LIVONIA, Mich. — Schoolcraft College here has withdrawn its offer to have former auto maker John Z. DeLorean speak at a college fundraiser Nov. 27.

"We withdrew our offer for the date after waiting for the signed contract for over two weeks," said Schoolcraft spokesperson Pat Newman. "However, the offer is still open for a later date."

Golden day for James

An Oldsmobile rocket emblem sculptured in ice was part of the decorations for a reception honoring F. Bernie James, James Oldsmobile, Inc., Charleston, S. C., for his 50 years in the automobile business. Looking on is Larry B. James, left, who is general manager of the dealership. At right is Patrick J. Hayes, Oldsmobile's Charlotte zone manager.

25th Distinguished Achievement Award

L. T. Boswell Sr., center, retired founder of L. T. Boswell Ford in San Benito, Tex., receives the dealership's 25th Distinguished Achievement Award from Cliff Johnson, assistant sales manager of Ford's Houston district. Also pictured are, from left: S. P. Boswell and L. T. Boswell Jr., partners, and Robert Graziano, Houston district field manager. The award is given in recognition of progressive management, modern sales and service facilities, sound merchandising practices and high quality standards.

Imported-car inventory holds at 24-day supply

Continued from Page 1

mated by AUTOMOTIVE NEWS. With dealers selling Porsches from VWoA and others from the new Reno-based Porsche Cars North America, inventory totals were not available at presstime.

• Alfa Romeo's high days-supply figure was mostly the result of a sales drop. Jaguar's inventory — what little there was — was not yet affected by the seven-day walkout in Britain; its effect on inventories and sales is expected to show up in December.

Renault's import inventory became even more bloated as its sales rate fell. Saab increased its sales rate, resulting in a sharply lower days-supply figure.

As noted, Toyota's truck days-supply figure doesn't show that the importer more than kept pace with a sharply higher sales rate during the month.

The big change in Isuzu's truck numbers was caused by both decreased sales and increased shipments.

The imported-vehicle inventory stood at 274,323 units, or 27 days' worth. The unit total was the highest since July 1. On Oct. 1, the count was 257,941 — also a 27-day supply. On Nov. 1, 1983, it was 288,743, or 33 days' worth.

The Nov. 1 import-car inventory was split this way: 61.07 percent from Japan, 23.14 percent from Germany and 15.79 percent from other European countries.

One month earlier the split was 61.17 percent Japan, 22.23 percent Germany and 16.50 percent other European countries.

• The Japanese makes and their days' supplies were: Imported Honda, 6; Subaru, 11; Toyota, 11; Mitsubishi, 15; Mazda, 23; Nissan, 24; Chevrolet Sprint, 34, and Isuzu, 51. (Honda had a 7-day supply of domestic Accords; combined, its inventory was 6½ days.)

In addition, there was a 48-day supply of Mitsubishi-built Chrysler captive imports, broken out this way: Dodge Colt, 38; Plymouth Colt, 48; Dodge Vista, 56; Plymouth Vista, 57; Plymouth Conquest, 107, and Dodge Conquest, 120.

The German makes and their supplies: Mercedes-Benz, 18; Porsche, 30 (estimated); Audi, 48; BMW, 51, and VW imports, 70. (VW's domestic stockpile stood at 70 days; combined, it had a 60½-day supply.)

The other Europeans and their days' supplies were: Jaguar, 14; Saab, 25; Volvo, 44; Maserati, 44; Peugeot, 59; Alfa Romeo, 126; Renault, 256, and International Automobile Importers, 662.

The pickup inventories were: Mazda, 16 days; Mitsubishi, 27; Toyota, 41; Nissan (including both imports and domestics), 47; Chrysler captives, 52, and Isuzu, 76.

2 DeLorean prototypes to be sold at auction

NEWPORT BEACH, Calif. — Two original DeLorean DMC prototypes are among 400 collectible cars that will be auctioned here Nov. 24-25 at Rick Cole's Newport Beach Collector Car Auction.

The auction, with cars sold on a no-reserve / no-minimum-bid basis, will be held at the Marriott Hotel and Tennis Club.

Denver snowstorm spurs sales of 4WD vehicles

DENVER.—Denver's first major snowstorm of the season may have left some residents stranded in their driveways, but many took action to assure they would not be stuck again.

The Denver Big Wheels Dealers Assn. reported that four-wheel-drive Jeep and Eagle sales rose significantly in the five-day period following the storm, with 232 new 4WD units sold from Oct. 16-20. For the five days prior to the storm, 148 vehicles were sold.

Sales of used 4WD vehicles also jumped following the storm, with 96 units sold in the five days after the snowfall, compared with 73 for the same period before.

Denver's four Big Wheels include: Colorado AMC-Jeep-Renault; Bob Bundy AMC-Jeep-Renault; Broadway AMC-Jeep, Inc., and Osborn AMC-Jeep-Renault, Inc.

More than a month ahead of 1983

Auto production passes 7 million

By Louise Kertesz
Detroit Reporter

U.S. auto production topped seven million Friday (Nov. 16), a level that was not reached in 1983 until the final work week of the year.

This year's output of 7,006,676 cars was 16.49 percent ahead of the 6,014,942 completed last year at this time.

Makers targeted completion of 177,021 cars last week, 7.19 percent more than the previous week's 165,151 and up 3.68 percent from the year-ago week's 170,732.

Companies shared last week's estimated production as follows: General Motors, 55.87 percent; Ford Motor Co., 23.02 percent; Chrysler Corp., 15.59 percent; American Motors, 2.71 percent; American Honda, 1.74 percent, and Volkswagen of America, 1.07 percent.

GM's Pontiac Plant 8 reopened last Monday (Nov. 12). About 2,400 workers are being recalled to produce Oldsmobile Cutlass Supremes and Buick Regals. Pilot production is scheduled to start in December.

GM plants in Lansing (Oldsmobile Nos. 1 and 2) and Wentzville, Mo., were scheduled to work one overtime shift Saturday (Nov. 17).

GM plants scheduled to work two overtime shifts Saturday were: Doraville (Ga.), Fairfax (Kans.), Linden (N.J.), Oklahoma City and Wilmington (Del.).

Chrysler's St. Louis Plant No. 2 was also scheduled to work two overtime shifts Saturday.

Also working Saturday were Ford Motor plants in Edison, N.J., Kansas City and Wixom, Mich.

Chrysler plants scheduled to work two nine-hour shifts today and tomorrow (Nov. 19-20) are: Belvidere (Ill.), Newark (Del.) and St. Louis Nos. 1 and 2.

Chrysler's Jefferson plant (Detroit) is scheduled to work two 8½ hour shifts on those days.

UAW will urge Chrysler to reopen labor contract

Continued from Page 3

make about $1 an hour less than those at Ford and GM because of concessions granted to the company when it faced bankruptcy in the early 1980s. Those concessions were worth more than $1 billion.

The current contract covers about 60,000 workers in the U.S.

A similar reopening request was made by the Canadian UAW last July. UAW Vice President Robert White sent a letter to Chrysler Canada asking that the contract be reopened in light of the $1.5 billion profit Chrysler Corp. made in the first half of the year.

Chrysler Canada, with input from the U.S. parent, rejected the plan.

The Canadian UAW will now wait and see what is decided by the union in Detroit and will follow that lead, White said. But, he said, if the union asks Chrysler to reopen in the U.S., he will follow suit in Canada and request that both the local and national agreements be reopened.

Canadian law requires that all local agreements be settled before a national contract can be finalized.

There are about 10,000 UAW-represented workers at Chrysler Canada.

Ford workers ratify Canadian agreement

TORONTO. — UAW-represented workers at Ford of Canada last week ratified a new three-year contract by 82.7 percent. The new agreement will raise their wages from $13.08 an hour (Canadian, including cost-of-living adjustments) to about $15.60 an hour (Canadian) when the agreement expires.

The contract covers 14,250 Ford hourly workers.

Truck production slips from top week of year

Domestic truck makers targeted assembly of 65,099 trucks last week, down 7.22 percent from the previous week's record high for the year of 70,166.

That record was more than 2,000 units better than projected and 3,332 units up from the previous high set during the week ended June 23.

Last week's output was 11.28 percent more than the year-ago week's 58,499.

Year-to-date, 2,790,645 trucks have been completed, 30.83 percent more than the 2,133,000 assembled at this time last year.

General Motors' truck and bus assembly plant in Baltimore will stop production for three days this week due to what GM called "a shortage of quality parts."

Production is scheduled to resume next Monday (Nov. 26).

GM's plant in Detroit scheduled one overtime shift Saturday (Nov. 17). Its plant in Janesville, Wis., scheduled two overtime shifts Saturday.

Chrysler Corp.'s Warren (Mich.) plant also scheduled two overtime shifts Saturday.

Ford Motor Co.'s Louisville facility also worked Saturday.

Chrysler's Warren plant is scheduled to work two nine-hour shifts today and tomorrow (Nov. 19-20).

Canadian output climbs for week; 23,078 cars built

Canadian car production of 23,078 units registered a small gain last week (4.72 percent), since the previous week's expected 1984 high was not attained. That week's actual production was 22,038 cars.

Last week's total was 9.17 percent better than the year-ago week's 21,140.

Annual truck production passed the 700,000 mark last week, a level not reached last year when 560,864 trucks were built.

Last week's output of 17,031 trucks was 14.77 percent better than the previous week's 14,839 and 13.25 percent more than the year-ago week's 15,038.

Chrysler Corp.'s Windsor (Ont.) plant assembled 2,040 Plymouth Voyagers, 2,055 Dodge Caravans and 605 Mini Ram Vans last week, bringing the total T-115s completed this year to 206,204.

International Harvester lost three days' production because of a strike that began last Wednesday (Nov. 14).

General Motors closed its B Line in Oshawa, Ont., last week for changeover from the regular-size Chevrolet Caprice to the mid-size front-wheel-drive Pontiac 6000.

Production is scheduled to begin by the end of February, 1985.

Such an engine is years away, report says

Japanese push ceramics

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Use of ceramic components is increasing on Japanese automobiles, but completion of an all-ceramic engine certainly will not happen "within the decade," according to a report by the National Research Council's National Materials Advisory Board.

The report, High-Technology Ceramics in Japan, found "the Japanese do not appear to have a technical edge over the U. S. in the field of ceramics in general."

However, it did find an impressive Japanese effort underway to transform high-technology ceramics know-how into manufacturing processes and consumer goods.

Much of the basic research being relied on by the Japanese is of U. S. origin, but the Japanese are building on that largely academic understanding by producing products of use to a variety of industries, including auto manufacturing.

The Japanese strategy is to develop so-called "thin markets" for high-technology ceramics.

That strategy is being pursued by the Ministry of International Trade and Industry, the Japanese Fine Ceramics Assn. (an inter-industry association) and the MITI-budget-controlled Engineering Ceramics Assn. for High-Performance Ceramics.

The goal is to gain widely diffused practical experience with ceramics throughout the Japanese economy by finding products that can now be made of ceramics that might otherwise be made of more traditional materials.

• The idea seems to be that a working knowledge of ceramics — that could produce cost and technology breakthroughs — is worth whatever short-term disadvantages the material now holds for manufacturers.

A secondary gain is that these new material toeholds will help build acceptance of ceramics among consumers and familiarity among industrial users of components now made of plastics and metals.

Toyota Motor Corp. is now banking on the high-technology lure that fine ceramics seem to have for Japanese consumers. Toyota is heavily committed to ceramics research and applications and has used the ceramic content of Toyota vehicles as a selling point.

According to the report, Nissan, Honda and Isuzu are aggressively competing to find new uses for high-technology ceramics on their products, with Isuzu being committed to the introduction of at least one new ceramic engine component each year.

The report predicted that ceramic automobile components will be common on Japanese autos by 1990 and available on all Japanese makes by 1993.

• But most of those applications are expected to replace relatively small, low-value engine components — at least initially.

Again, the idea in the Japanese auto industry is to build experience and confidence, to

breaking news

UAW and Chrysler hold informal talks

DETROIT.—The UAW and Chrysler Corp. have held informal talks on the possibility of reopening the current labor agreement, according to Thomas Miner, Chrysler labor relations vice president. The contract expires Oct. 15, 1985. There has been no formal request from the union to reopen the pact, but the UAW has indicated it will send a letter asking for early bargaining.

Chapman family sells Lotus shares

LONDON. — The British earthmoving-equipment maker JCB and a British merchant banking group, Schroeder Wagg, have purchased nearly all the Group Lotus shares held by the family of the late Colin Chapman.

Canadian UAW talks merger with Air Line union

TORONTO.—The 100,000-member Canadian UAW has begun merger talks with the 4,500-member Air Line Employees Assn. The Canadian UAW currently is part of the International UAW based in Detroit, but UAW Vice President Robert White has said there have to be changes if that relationship is to continue. He has advocated a Canadian Metalworkers Federation. Merger talks are also being held with two other unions with a combined membership of about 20,000. White would not identify the unions.

Rebound to follow late '84 slowdown

RV leaders see years of growth

By Jack Walsh
Truck & RV Editor

LOUISVILLE. — Recreational-vehicle sales have slowed somewhat in the second half of 1984, but industry leaders are confident of a rebound after the first of the year and steady growth for the remainder of the decade.

Optimism was high here at the start of the 22nd annual national RV show sponsored by the Recreation Vehicle Industry Assn. More than 1,000 of the latest models and thousands of RV parts and accessories are being displayed at the biggest show in six years.

Other RV and LV stories are on Pages 16 and E-1 to E-28 following Page 32.

Robert D. Burger, Chevrolet general manager, is looking for an upturn in RV sales in the first quarter of 1985 and said Chevrolet expects its RV business next year to hit record levels for the third consecutive year.

"Generally, RV sales are slow during the fourth quarter, the quarter in which a number of trade shows take place," he said. "These shows usually generate sales that show up during the first and second quarters of the following year."

Thomas H. Corson, chairman, Coachmen Industries, Inc., thinks sales will be up in 1985, but at a slower rate than this year.

"We look for a 5 to 10 percent growth in units, a contin-

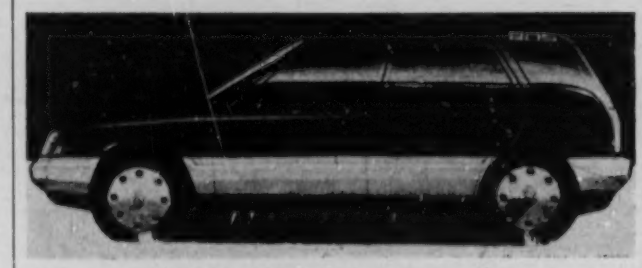
Fresh at Turin

A Ford reply to Fiero?

Maya idea car was displayed at the Turin Motor Show by ItalDesign. Ital's Giorgetto Giugiaro said the Maya is a result of a "stimulus from Ford." In Turin, it was viewed as a positive Ford response to the Pontiac Fiero and the coming mid-engined Toyota.

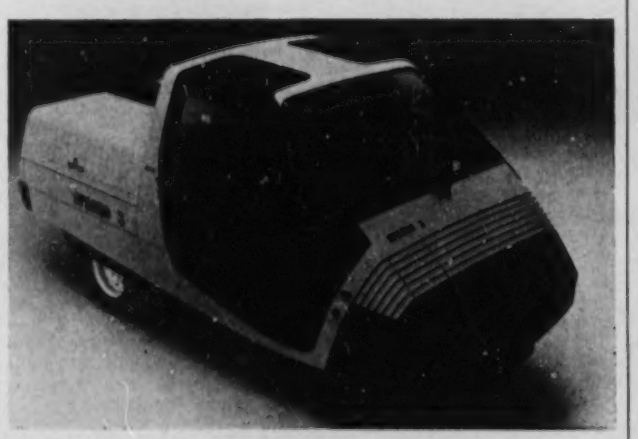


A Peugeot idea by Pininfarina

Station wagon version of Peugeot 205 is a product of Pininfarina imagination. The vehicle was displayed at the Turin Motor Show, but there are no plans for production.

Lancia Thema ready to roll

Turbocharged Lancia Thema was a new Fiat entry at the Turin Motor Show. The car had been previously announced, but is now going into production.



Close to the minimum

Maggiora Spazio 3 idea concept vehicle based on the Piaggio three-wheeled utility vehicle widely used in Italy. It was on display at the Turin Motor Show.

AMC to discuss timetable in January

China to get a Jeep replacement

By Richard Johnson
Detroit Reporter

American Motors and its Chinese partner are due to set a timetable in January for introduction of a replacement for the BJ212 four-wheel-drive currently being assembled at Beijing.

Passenger-car production plans for the Far East are also scheduled to be addressed at a meeting of the Beijing Corp. board of directors, according to Jose Dedeurwaerder, AMC president and chief executive officer.

Beijing Jeep, a joint venture of AMC and the Chinese Government, is currently assembling a four-door, five passenger 4x4 based on a Russian design of the 1950s. At the same time, the joint venture has been laying plans for the next generation BJ213 that is expected to be marketed in China and throughout the Far East within three years.

"We've decided to upgrade the product we are building in China, which is a very old product," said Dedeurwaerder in an interview with AUTOMOTIVE NEWS. "Our final position on the timing to launch the vehicle will be taken in January with the board of directors of Beijing Jeep Corp."

The AMC president said the partnership is also working to develop a network of Chinese suppliers for BJ213 components.

• "In China, the integration is not going to a supplier and telling him to develop a part," he said. "If you want parts, you first develop the means and the tools and then you have a part."

The BJ213 will be built around the Jeep CJ platform, although AMC officials have said it will be an entirely different vehicle. AMC engineers began working on the project last summer, and Chinese representatives have visited the corporation's Southfield (Mich.) headquarters to review progress.

"We have a very good relationship with the Chinese people," said Dedeurwaerder. "There are Chinese engineers in Detroit who are in training programs in our company. What has surprised us most is that they are more in a hurry than we were initially."

Plans have called for production of about 20,000 BJ212 vehicles this year for the Chinese domestic market and about twice that many in 1985.

Dedeurwaerder said plans are also being formulated for possible passenger-car production at Beijing, probably based on a Renault Alliance platform.

"At the same meeting, we will finalize that, too — on the preproduction — to see what they are really looking for," he said. "If we do something, it will be on a type of Alliance, Renault 9 platform. We are working with our partner Renault to have the right product to put in China.

• "It is very difficult to take cars that are at the technical level we are putting in cars today and put them in China," Dedeurwaerder said.

"For example, you have to revise the suspension because the roads are not very good. You have to revise the engine because there is no need to have an injected engine and things like that. You have to handle the technical portion of the business differently."

The future course of passenger-car development is expected to be set at the upcoming Beijing Jeep board meeting.

"We are looking at it and we can probably give you a fairly good position after the end of January," said Dedeurwaerder. "It is very interesting to us."

In September, AMC said it has invested $16 million in the Chinese project, including $8 million in technology. By reinvesting profits, AMC will eventually hold 49 percent ownership. Its current stake in the operation is 31.3 percent.

GM employes upset by transfer to EDS

By Marjorie Sorge
Labor Editor

White-collar employes who will be transferred to Electronic Data Systems Corp. Jan. 1 have begun signing petitions requesting that the UAW become their bargaining agent.

Beginning Jan. 1, about 7,000 data processing workers in the U. S. will be transferred to EDS, which is now a wholly owned subsidiary of GM. Many workers however, are concerned about changes in wage and benefit structures and job security and have shown an interest in joining the UAW.

According to a union source, signing petitions is the first step in organizing. The UAW has made a full economic commitment to the organizing drive, he said, and will try to call an election as soon as possible.

However, according to one union official close to the drive, it is unlikely that an election could be held by the Jan. 1 transfer date.

EDS and GM, while indicating that there will be some changes in benefits, maintain that in the long run the bottom line will be basically the same.

• The data processing workers are angry about the transfer because they had no voice in the decision, said one source. Other salaried workers share that anxiety, fearing that GM will acquire other companies in its move to diversify and transfer workers in other areas, he said.

"The whole problem is psychological," the source said. "Many people who come to work for GM expect to do so from the cradle to the grave."

The data processing white-collar workers' interest in organizing became apparent a few weeks ago when about 400 people in the Detroit, Flint and Saginaw areas attended an organizing meeting.

If the union is elected as the bargaining agent, the bargaining unit would be part of the UAW's office workers' section.

GM has long fought against any organizing of white-collar workers and plans to continue that position, a spokesman said.

Audi 4000 prices up $620 to $710

TROY, Mich.—U. S. prices of Audi 4000 and GT Coupe models have been increased $620 to $710 for '85.

The 4000-S four-door sedan is $13,950, up $710; the 4000-S Quattro four-wheel-drive four-door sedan is $17,450, up $620, and the GT Coupe is $15,250, up $665.

The '85 prices of the Audi 5000-S sedan and wagon and the 5000-S Turbo sedan were announced earlier. They are up $620 to $1,070.

GM donates $1 million to ITI building campaign

ANN ARBOR, Mich. — General Motors has donated $1 million to the Industrial Technology Institute Building Campaign.

ITI was established to provide businesses with basic engineering research and development assistance to support automated manufacturing technologies and to collaborate on joint ventures with industrial partners.

DeLorean cancels second lecture to college group

DETROIT. — Former auto maker John Z. DeLorean has canceled a second university lecture, originally scheduled for this week.

DeLorean, acquitted last summer of conspiracy to distribute cocaine, was to be the guest speaker at Butler University in Indianapolis, Nov. 28, but a spokesperson for the Student Assembly, the sponsor of the lecture, said DeLorean has backed out of the engagement.

A lecture had been set for the night before at Schoolcraft College in Livonia, Mich., but was canceled when DeLorean failed to sign a contract.

He was to receive $12,000 for each lecture.

Other universities reportedly were negotiating to have DeLorean address students. His topic at Schoolcraft and Butler was to have been FBI surveillance of business people.

The Schoolcraft College lecture would have been DeLorean's first public appearance since the drug trial.

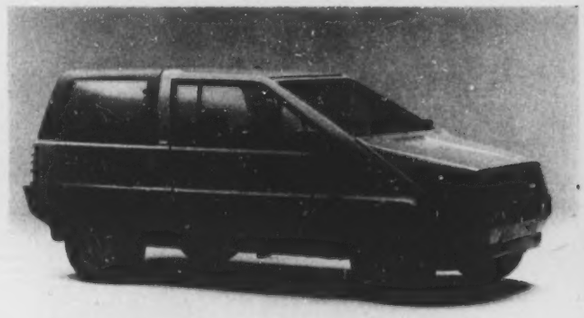
More from Turin

Magnum with 4 to go

Rayton Fissore Magnum station wagon boasts four-wheel drive for maximum traction. Exhibited at the Turin Motor Show, it is said to be ready for immediate production.

New face for an aging shape

Innocenti 650 makes do with a body that gives away its descent from the British Mini. But styling from windshield forward gives a more contemporary look. It was displayed at the Turin Motor Show.



4WD in mini-size

Maggiora Gobi 4WD, designed by Paulo Martin, was presented for the first time at the Turin Motor Show. It is based on the Fiat Panda.

Slick new wagon from Fiat

New entry from Fiat, displayed at the Turin Motor Show, is this Regata Weekend 100-S station wagon. The little charmer is based on the Fiat Regata sedan.

RV prospects called good for rest of decade

By Jack Walsh
Truck & RV Editor

In spite of the current slowdown in recreational-vehicle sales, 1984 will be a good year for the industry, and both chassis manufacturers and RV leaders are looking for an upturn early in 1985, and continued growth throughout the decade.

This year hasn't been as good as some expected, but in the opinion of Thomas H. Corson, chairman, Coachmen Industries, Inc., it's been one that could be the envy of many businessmen.

"The year will wind up . . . with retail sales approximately 10 percent ahead of last year," he said. "The vast majority of business people in America would be pleased to participate in an industry that enjoyed a 10 percent growth."

He noted, however, that the industry had expected a gain of from 25 to 28 percent during the year, and added:

"This optimistic expectation was probably not totally justified, but it might have materialized had we not had generally poor climate during the spring, four increases in prime interest rates and some concern over Lebanon and Persian Gulf developments at the height of the prime selling season."

• For 1985, Corson sees continued growth, but at a slower rate than this year, with prospects of a "reasonably good business environment for our industry over the foreseeable future."

"We look for a 5 to 10 percent growth in units (in 1985), a continued slow trend toward motorized and a 5 percent inflation factor," he said. "This should develop a 15 to 20 percent increase in dollar voume for the industry."

Robert D. Burger, Chevrolet general manager, said RV sales should start turning up after the first of the year.

"Generally, RV sales are slow during the fourth quarter, the quarter in which a number of trade shows take place," he observed. "These shows usually generate sales that show up during the first and second quarters of the following year."

He noted that the RV indus-

Isuzu heavy makes U. S. debut

Although there are no plans to market it in the U. S. at this time, this Class 8 Isuzu tractor was part of the display by Isuzu Truck of America, Inc., at the recent Truck '84 show in Las Vegas. Isuzu Truck has introduced a Class 3 diesel straight truck in the U. S., and demonstrated the vehicle to dealers prior to the show.

Mack earnings, sales boom in third quarter

ALLENTOWN, Pa. — Third-quarter sales and earnings were significantly higher than those in the same period a year ago, according to Mack Trucks, Inc.

Net income for the three months ended Sept. 30 amounted to approximately $24.2 million, the company said, compared with $39,000 a year ago.

A spokesman said earnings benefited from a $9.3 million reversal of deferred tax liability related to the untaxed income of Mack's DISC (Domestic International Sales Corp.) subsidiary, and included a tax benefit of $789,000 from loss carry forwards.

Net sales for the quarter totaled about $500.8 million, an increase of 67 percent over the previous year's $300.1 million.

The spokesman said deliveries of Class 8 trucks during the three-month period were 94 percent higher than a year ago, while shipments of Class 6 and 7 Mid-Liner vehicles were up 47 percent.

Parts and service sales increased 23 percent over the year-earlier period, he added.

For the first nine months, net income amounted to approximately $55.8 million, the spokesman said, compared with a net loss of $30.5 million in the like period a year ago.

He added that net income for the January - September period included approximately $22.4 million of tax benefits related to the DISC subsidiary and the utilization of tax loss carry forwards.

Nine-month net sales amounted to approximately $1.5 billion, an increase of 75 percent over the $859.5 million reported in the comparable period a year ago.

IH will produce lighter Paystar for tough service

CHICAGO. — The Paystar F-5070 Weight Watcher, a lightweight severe-service heavy truck, will go into production in January in its Canadian plant in Chatham, Ont., according to International Harvester's Truck Group.

Thomas Dougherty, marketing vice president, said the Weight Watcher "offers severe-service customers weight savings without sacrificing the muscle they need to get the job done.

"With some versions weighing as low as 13,950 pounds," he added, "this model still gives users the durability they expect from the Paystar line. Its sloping hood helps give it unmatched visibility from the roomiest cab in its class."

Dougherty noted a number of major design refinements in the Weight Watcher model:

An improved premium aluminum cab with new sealer adhesives that he said increase cab strength up to eight times, and a reinforced roof panel.

A heavy-duty Donaldson air cleaner installed under the hood.

Improved battery box and surge-tank mountings.

All steel crossmembers and gussets for increased reliability.

A standard 27-inch integral front-frame extension and Cummins L10 engines in both 240 and 270-HP versions.

Collins wins contract

HUTCHINSON, Kans. — Collins Industries here announced federal government contracts calling for purchase of 22 of its ambulances and two terminal trucks, valued altogether at approximately $660,000.

New Paystar is a 'weight watcher'

The Weight Watcher is what International Harvester calls its new lightweight, severe-service truck. Some versions of the Paystar F-5070 weigh as little as 13,950 pounds yet still provide superb durability, according to Harvester.

truck industry news

Truck tallies soar to nine-month high of nearly 3 million

Nine-month registrations of new trucks of all types in the U. S. were the highest in industry history, topping the previous mark set in 1978 by slightly more than 11,000 units.

Through September, according to R. L. Polk & Co. statistics,

Table on Page 40.

2,994,962 trucks were registered, 11,115 more than the nine-month total of 2,983,847 six years ago, and 40.8 percent greater than last year's 2,127,031 units.

September tallies also set a record for the month. The total was 357,465 units, 6.8 percent higher than the 334,731 registered in the same month in 1978 and an increase of 43.5 percent over last year's 249,084.

Registrations through September were up sharply over last year in the three major market segments and all weight groups. Only light trucks, however, topped the nine-month count six years ago, and this year's total hit an alltime high.

In the January-September period, 2,811,378 light trucks were registered, an increase of 40.5 percent over the year-ago 2,000,637 and 3.4 percent greater than the previous high of 2,718,690 established six years ago.

Medium trucks through September were up 20.2 percent to 41,836 units, compared with 34,810 last year. But they were down 65.3 percent from the 121,983 units registered in the like period in 1978.

The heavy-truck total for the nine months was 54.8 percent higher than a year ago, 141,748 versus 91,584, and only one percent off the 1978 count of 143,174 units. The nine-month high of 161,388 heavies was set in 1979.

Group 1 registrations through September were up 42.5 percent over last year, from 1,133,409 units in 1983 to 1,615,086. They were 93.2 percent higher than the 836,036 tallied six years ago,

Toyota reduces output forecast to 3.37 million

TOKYO.—Toyota, which was set to increase output this year, is now expecting to exceed last year's figure only by a very small margin.

Shoichiro Toyoda, Toyota president, told AUTOMOTIVE NEWS in Tokyo that when domestic sales were increasing in the early half of the year, the schedule for the second half of the year was increased.

In recent months, though, sales have fallen in Japan, so Toyota has revised its forecast back to the earlier level.

Last year, Toyota produced 3.27 million vehicles, and initially it forecast output of 3.37 million for this year. Later, this was increased to more than 3.4 million, but that level is now considered unattainable.

Less-developed countries seen taking larger share

Steel-producing outlook charted

Even the Japanese are not immune to long-range trends now taking shape in world steel markets.

A recent study indicates Japan faces a future of reduced steel-making capacity and production as less-developed countries tap into the business.

"The recent past has fundamentally altered expectations, attitudes, policies, and even the forecasts of the world industry," says John Jacobson, director of Chase Econometrics' Steel Services. "Steel executives now long for the days when they devoted their attention to planning for the impending world steel shortages. Of course, since 1979, steel producers in the U.S., Western Europe and even Japan have had to address their attention to cutting back on facilities, personnel, and raw materials requirements rather than deciding where to build a new steel plant.

"We believe the reductions in steel operations undertaken thus far are necessary but not sufficient to get the level of steel supply into line with expected levels of steel demand." Jacobson says.

"It will take a further reduction of 15-20 million tonnes of U.S. steelmaking capacity between now and 1986 to get the U.S. capacity utilization rate up to 80 percent. The European Economic Community will also have to slash steelmaking capacity by 35-40 million tonnes between now and 1986 to achieve a capacity utilization rate in the 75 percent range.

"Additionally, it is now clear that Japan will also reduce steelmaking by 5-10 million tonnes between now and 1986 just to achieve a 70 percent utilization rate," says Jacobson.

"At the other end of the spectrum, less developed countries will add nearly 20 million tonnes between 1983 and 1986 and more than 30 million tonnes by 1990, Jacobson says.

• "The primary element of any steel shortage scenario has been a forecast for strong growth in steel demand," Jacobson says. "As late as mid-1980 some analysts placed a 70 percent probability on a non-Socialist world steel shortage by 1984 based on a 2.0-2.5 percent annual growth in demand. Unfortunately, apparent steel consumption declined an average 3.6 percent between 1980 and 1983 in the non-Socialist world. We continue to believe there is little or no chance of a general steel shortage."

Effective planning in the steel industry of the 1980s will require constant attention to economic, trade, technology and market developments on a worldwide basis," adds Jacobson. "Among the vital issues to watch are the U. S. budget deficit, fluctuations in interest rates, government trade sanctions, increased use of continuous casting, growth in direct-reduced iron technology, product downsizing and material substitution."

The following tables summarize Chase Econometric's current estimates of apparent steel consumption growth and steelmaking capacity.

Apparent Steel Consumption

(Average Annual Growth—%)

	1980-1985	1985-1990	1990-1995
EEC	−3.4%	2.7%	1.3%
Japan	−1.7	2.6	1.0
USA	0.0	1.4	0.7

Runzheimer studies fleet ownership-operating costs

Stick shift called $206 cheaper

By Francis J. Gawronski

It costs less to own and operate a fleet car with a manual transmission than a car equipped with an automatic, according to Runzheimer International, the management consulting firm based in Rochester, Wis.

The total average annual costs differ by $205 for manual vs. automatic transmission (see table). The figure came from a cost analysis of selected compact and subcompact 1984 models released by the research firm's newsletter, Runzheimer Reports on Transportation.

Runzheimer's transportation analysts selected four models and evaluated them on the basis of variable costs such as gasoline, oil, tires and maintenance; and fixed costs which include licensing, depreciation, financing, taxes and insurance.

Runzheimer said all costs were based on a three-year/60,000-mile tradein cycle.

Average annual operating cost savings with manual transmission were said to be considerable—$113 per year, mostly due to the increased per mile gasoline savings.

Average annual ownership cost savings realized by choosing a manual transmission rather than an automatic amount to $93, the survey found, mostly due to the higher purchase price of cars equipped with the automatic.

• In sum, Runzheimer noted, a fleet can save $206 per year by maneuvering with manual transmissions. Over a three-year cycle, the total saved amounts to $618 for a single car. Multiply that savings by a mere 50 cars and a fleet budget can cut costs up to $30,900, the firm said.

Runzheimer said the model showing the greatest cost difference is the American Motors Encore S with manual transmission which costs $355 less to own and operate at $3,485 per year than with the automatic transmission model which costs $3,840 (see table).

The Runzheimer newsletter concluded that in addition to shifting convenience and purchasing tradition, cost alsc should be a factor when weighing manual transmission against automatic transmission.

Of course, noted Runzheimer editors, for those who don't know how to shift a manual transmission, cost may be no object.

Elsewhere, David R. Parker has joined Ryder System, Inc., Miami, as senior executive vice president and chief operating officer—business service group. He previously was executive vice president and sector executive for packaging for American Can Co.

AVERAGE ANNUAL TRANSMISSION COSTS

Automatic vs. manual

Transmission	Average Annual Costs: Operating	Ownership	Total	Cost Comparison
Automatic	$1,323	$2,547	$3,870	+ $206
Manual	1,210	2,454	3,664	

Averages based on cars itemized in Table 2 and specified basis.

PROJECTED AVERAGE ANNUAL COSTS

Automatic vs. manual transmission

Make	Transmission	Average Annual Costs: Operating	Ownership	Total	Cost Comparison
Ford Tempo,	Automatic	$1,520	$2,659	$4,179	+ $157
	Manual	1,440	2,582	4,022	
Plymouth Reliant,	Automatic	1,240	2,677	3,917	+ $180
	Manual	1,150	2,587	3,737	
AMC Encore S,	Automatic	1,380	2,460	3,840	+ $355
	Manual	1,150	2,335	3,485	
Chevrolet Cavalier,	Automatic	1,150	2,390	3,540	+ $128
	Manual	1,100	2,312	3,412	

Basis: Except for the transmission distinction, all cars are similarly equipped, including PS, PB, AC, tinted glass, AM radio. Ownership expenses include licensing, depreciation based on a vehicle retention cycle of 3 years/60,000 miles, financing, taxes and insurance. Operating expenses include oil, maintenance, tires and fuel.

Note: Costs vary among geographic locations so these average figures should be used only as a guide.

Fiber Designs imports Rinspeed parts

Fiber Designs, Brea, Calif., manufacturer of Kaminari styling and performance accessories, is importing Rinspeed styling components into the U. S. The components are for Porsche, Mercedes-Benz and Lamborghini models.

Volvo prices up $235-$770; Lambda Sond is standard

ROCKLEIGH, N. J. — Volvo North America Corp. has increased prices of its U.S. models $235 to $770 for '85. The Lambda Sond emission control system is included in the '85 prices; it was $137 and $158 extra on various '84 models.

Prices of the '85s range from $12,940 for the DL four-door sedan to $23,060 for the 760 Turbo four-door sedan with automatic transmission.

New for '85 are the 740 four-door sedans. The 740 GLE is $16,845 and the 740 Turbo is $19,045. Automatic transmission is $395 extra on the GLE and $435 extra on the Turbo.

In the DL series, the four-door sedan is $12,940 (up $630) and the wagon is $13,415 (up $680). In the GL line, the sedan is $15,985 and the wagon is $16,515. The hikes are $555 on the sedan and $530 on the wagon.

After November, air conditioning will be installed on all DL models at an additional price of $890.

Turbo models had the smallest increases. The sedan is $18,420 (up $260) and the wagon is $18,950 (up $235).

The top-line 760 series starts at $21,485 for the GLE automatic. It's up $260.

The 760 Turbo prices are $22,625 with manual transmission (up $725) and $23,060 with automatic (up $770). The 760 turbodiesel will continue to be built as an '84 model through December. The price stays at $22,470. All 760 models are four-door sedans.

Market will keep poppin'

Firms bullish about '85, survey indicates

By Al Fleming
Industry Editor

How are van conversion manufacturers doing this year? Just fine, thanks. And 1985 will be another "can do" year for the industry.

That's indicated by an AUTOMOTIVE NEWS survey of U. S. van conversion companies nationwide.

Conducted in late October and early November, the up-to-the-minute poll of the nation's van modifiers detects an optimistic mood that, it's projected, will be translated into an industry sales increase of 33 percent in the coming calendar year.

The survey drew responses from van conversion companies in 23 states: Alabama, California, Colorado, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Michigan, Missouri, New Jersey, New York, North Carolina, Ohio, South Dakota, Texas, Utah, Washington and Wisconsin.

The study examined such factors as past, current and projected shipments by van converters, company profiles, types and brands of vehicles converted, and price information.

When asked about their estimated shipments of conversion vans to dealers in 1984, 75 percent said they will be higher than in 1983. Looking toward the coming year, 73 percent predicted even more shipments than this year.

Based on data provided by the survey, AUTOMOTIVE NEWS projects that the median-size converter firm in the U. S. will sell 750 van jobs in 1984 compared to 543 in 1983, and 1,000 units in 1985. Those are increases of 38 percent this year and 33 percent next year.

The survey responses further indicate the relative youthfulness of the business. The average founding date of companies responding was 1975.

The survey also noted that 29 percent of the van conversion firms are divisions or subsidiaries of larger companies, and 26 percent have production facilities in more than one city.

Moreover, 66 percent of the companies ship and service their products nationwide, even though 66 percent are headquartered in just four

Smaller cars make van market bigger

Starcraft's Cuzzocrea: 'Continual downsizing of cars can only help'

By Jack Walsh
Truck & RV Editor

Van conversions have been on a roll since the start of the downsizing of automobiles to comply with the federal government's tough fuel-economy requirements, and industry leaders see even rosier prospects in the years ahead.

There has been some softening in the conversion market since August, but for the most part it's considered a seasonal lull with an upturn likely after the first of the year.

There also is speculation that buyers may be waiting to see what converters will do with the General Motors and Ford minivans and how they will be priced in comparison with conventional units, many of which are not within reach of less-affluent prospects.

The GM minis — Chevrolet Astro and GMC Safari — will not be available in volume until the first quarter of 1985, while Ford Aerostar won't go into production until May.

"Van conversions currently are off about 10 percent," said John F. Sillick, Chevrolet special vehicles manager. "A lot of people, I think, are waiting on our M-vans (the minis). We should see an upturn in the market after the first of the year."

• James E. Lynch, special vehicle sales manager, Chrysler Corp. truck operations, sees no cause for alarm in the current market pause.

"This isn't the prime selling season for the van conversion," he said. "It's a personalized vehicle, bought generally in the spring and early summer. There should be a very strong comeback between February and May."

He added that van converters "are doing much better today in the way they do business. In the last two years, they've become much more professional in selling, customer service and followup. Their marketing strategies have improved vastly."

Dave Tarrant, Ford Division special vehicles sales manager, reported an increase in sales of van conversions in October after a lull in August and September, and said he looks for a good year in 1985.

"Van converters, however, will be facing much stiffer competition in the years ahead," he said. "Product quality and service excellence will be vital to their success."

The outlook is excellent for both the long and short term, according to executives of leading van-conversion firms.

"We are here for the long haul," commented Scott T. Chapman, president, Bivouac Automative Corp., Vandalia, Mich.

Bivouac's Chapman projects minivans will 'double our business in the next decade.'

"The van conversion industry over the last 20 years has grown and will continue to grow into a stronger force in the marketplace as long as we keep the integrity in our product," he said.

"We must strive to build this integrity with our suppliers, dealers and eventual customers."

Chapman noted that "there are far too many converters in the van conversion business today that are not committed to product integrity.

"However, we project that there will be fewer of these companies remaining in business, mainly because of their inability to meet the demands of high technology required by the motor companies and their ultimate consumers.

"Proof of this lies in the fact that we are currently experiencing our third shakeout within the last 15 years," he added.

Don Cuzzocrea, president, Starcraft Co., Topeka, Ind., said "the outlook for 1985 and balance of the decade is favorable for the high-quality luxury van.

"This type of vehicle has now established a solid market foothold with the upper middle class in the U.S. and Canada," he added. "The continual downsizing of autos can only help the van-conversion market, since people are not being downsized.

• "The only way that more than four people can be transported in comfortable luxury is in a van or motor home," Cuzzocrea said. "Motor homes will continue to sell well, but the true replacement for the no-longer-available full-size car is the van conversion."

Roland Doane, general manager, Universal Motor Coach, Sturgis, Mich., said "we see a very positive future for ourselves and our industry in general.

"We are beginning to implement a unique marketing and sales philosophy," he added. "This philosophy is targeted toward better communications and service with and for our dealer organization and a quality product packed with value for the consumer."

Both manufacturers and converters expect the minivans to provide plus business.

"We see this (the minivan segment) as another opportunity to fill a void in the marketplace," said Bivouac's Chapman. "Our projections are that this new product will double our business in the next decade.

"We will do this by developing a conversion that is unique in the industry both in design and function," he continued. "To date, our industry hasn't filled that void; however, the years ahead will give us the opportunity to experiment and find the proper package that meets that end."

Starcraft's Cuzzocrea noted that the minivan "will capture a large share of the automotive market, but it remains to be seen whether the conversion market will provide the bulk of the sales.

"Early indications are that total prices of the minis will be much more sensitive than with the full-size models," he said. "This reflects the differing income levels of the buyers. Also, although more roomy than automobiles, minivans simply lack the space of the full-size units."

Although there will be a market for the converted minis, Cuzzocrea added, "the opinion here is that full-size luxury vans will be the focus of the conversion industry.

"The successful companies," he said, "will be the ones with an unblemished record of delivering innovative, high-quality, attractive units in a variety of price ranges."

Future product changes, in Cuzzocrea's opinion, will be directed at making the converted van "more automotive and less truck or RV.

"The buyer of the late '80s will want every option available on his car to be available on his van," he said. "To that same end, we would like to see the chassis manufacturers increase engine performance and braking requirements."

Survey

Continued from Page E-1

states — California, Indiana, Michigan and Texas.

Although it may seem paradoxical, not all van converters convert all kinds of vans. Of those surveyed, 96 percent said they work on conventionally sized vans, 92 percent turn out minivan conversions, 47 percent do pickup truck alterations, 37 percent handle sport-utility vehicles and 32 percent are involved in miscellaneous products including limousines, motorhomes, medium-size trucks, buses, campers, funeral coaches, passenger cars and vehicles for the handicapped.

The most popular van conversion nameplate, by a slight margin, is Ford, with 91 percent of the conversion companies handling that line. It is followed by Chevrolet (89 percent), Dodge (85 percent), GMC (84 percent), Toyota (37 percent), Plymouth (37 percent) and Nissan (6 percent).

It is significant that the converter group is adhering to government vehicle safety mandates by and large. Of those queried, 97 percent said their products meet Federal Motor Vehicle Safety Standards (FMVSS).

The fact that less than 3 percent of survey respondents said their van conversions do not meet FMVSS regulations also can be attributable to van conversion safety programs inaugurated by industry associations (story Page E-19).

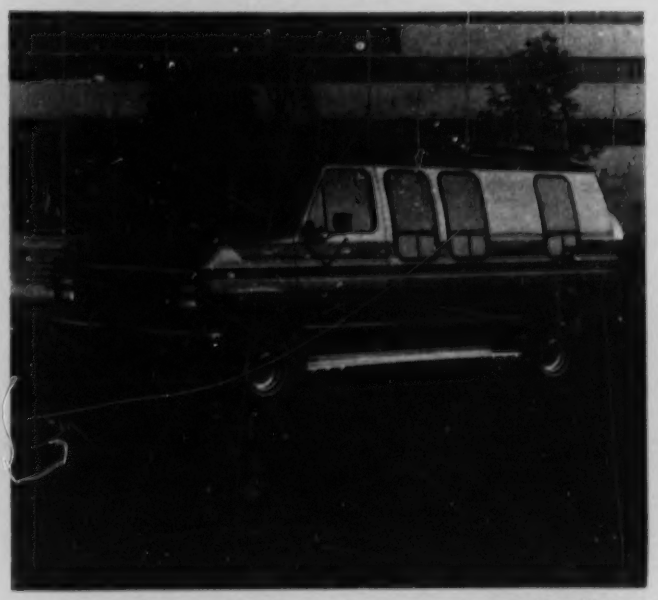
The survey responses also showed that 96 percent of van converters provide warranties with their products, 14 percent provide guarantees and 13 percent offer both a warranty and guarantee.

Regarding conversion cost, of the companies surveyed, 19 percent said they offer conversion packages to dealers (not including chassis price) for less than $2,000; 35 percent sell packages in the $2,001-$3,000 category; 71 percent $3,001-$5,000; 68 percent $5,001-$7,000; and 43 percent $7,001 and up.

Most (84 percent) of the companies said they accept drop shipments of vehicles.

It is estimated that about 20 percent of conversion vans are drop-shipped. Some converters offer special incentives—discounts on the conversion package, cash, trips or other prizes—to get dealers to have their vans drop-shipped to the converter (story Page E-16).

Despite the volatile character of the van conversion market, there is evidence of companies uniting in a common industry bond: 65 percent said they are members of the Recreation Vehicle Industry Assn., 28 percent claimed affiliation with the National Van Conversion Assn., Inc., and 10 percent are members of other state and local motor-vehicle related organizations.



More than 91 percent of van converters surveyed said they handle Ford products. This full-size Ford van conversion is by Sands Industries Inc.

★—New York and Oklahoma for 1984 compiled from manufacturers' sales records; Utah, September, 1984, delayed; no registrations for Oklahoma, 1983; Kentucky and New Mexico, September, 1983.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are Chevy-Van, El Camino and Blazer; Dodge, compact trucks; Ford, Econoline and Bronco; GMC, Vandura and Jimmy. *—Miscellaneous includes imports, Divco, Hendrickson, Oshkosh, etc.

—Compiled from R. L. Polk & Co. data

9-month total tops 1978 by more than 11,000 units

Truck registrations hit new high

Continued from Page 16

reflecting the surge in popularity of the compact trucks.

There also has been a significant change in Group 2 tallies since 1978. While this year's nine-month total of 1,167,658 was 36.8 percent higher than the year-ago 853,265, the count was 36.8 percent lower than the 1,847,299 units registered in 1978.

Group 3 tallies this year were more than double last year's, 28,634 versus 13,963. But they were 19 percent below the 35,355 vehicles registered in the like period six years ago.

Group 4 tallies through September totaled 524 units, up 109.6 percent over last year's 250, and 95.1 percent below the 10,679 vehicles registered six years ago.

The Group 5 count this year was higher than both the 1983 and 1978 totals. Through September, 2,599 units were tallied, compared with only 447 a year ago and 2,299 in 1978.

The increase in dieselization of Group 6 trucks has caused a big shift in registrations in this weight class since 1978.

The nine-month count was 38,713, down 64.5 percent from the 109,005 units tallied in 1978, but was up 13.5 percent from last year's 34,113 units.

Group 7 is the benefactor in the switch from gasoline power to the heavier diesel in Group 6 trucks.

Through September, the total was 48,801, a gain of 34.8 percent over last year's 36,212 and 72.7 percent higher than the 28,252 registered six years ago.

Nine-month Group 8 trucks were up dramatically from a year ago, but down from the like period in 1978.

The total this year was 92,947 units, 67.9 percent higher than the year-ago 55,372, but 19.1 percent below the 114,922 heavies registered in the same period six years ago.

For outstanding service performance

Harlan A. Haywood, second from right, Eastern regional sales manager for AMC/Jeep/Renault presents the American Motors Performance Masters Award for outstanding service performance for the Eastern region, for the first quarter of 1984, to Tom Leaman, district three (Allentown-Bethlehem-Eastern Pennsylvania area) service manager. Bernie J. Critelli, right, Philadelphia zone manager, and Marvin S. Johnson, left, zone parts and service manager, join them.

Fruehauf reports record sales, net in third quarter

DETROIT. — Fruehauf Corp. reported the highest third-quarter sales and net earnings in its history, according to Robert D. Rowan, chairman.

Net earnings for the quarter ended Sept. 30 totaled $21.4 million, an increase of 262 percent over last year's $5.9 million. Sales of $704 million were up 25 percent over the $563 million reported in the comparable quarter of 1983.

Sales of the trailer operations during the third quarter were more than 40 percent higher than the comparable quarter of 1983, Rowan said, and automotive operations also continued strong, with sales 13 percent higher than the third quarter of 1983.

Net earnings for the first nine months totaled $62.7 million on sales of $2.1 billion. This compares with a net loss of $10.6 million on sales of $1.5 billion for the first nine months of 1983.

Fruehauf Finance Co. reported net earnings of $5.4 million during the third quarter, up 35 percent from $4 million in the same quarter last year. Finance revenue totaled $22.5 million, a gain of 26.4 percent over last year's $17.8 million. Nine-month net earnings were $14.9 million, up 22.1 percent from the $12.2 million recorded in the same period in 1983.

Rowan indicated Fruehauf looks for continued strong performance in the near future.

"Our 1984 sales and operating earnings will be the highest in Fruehauf's history, and net earnings have an excellent chance of approximating the $88.7 million record set in 1979, which included $4 million of foreign exchange translation gains," he said.

Performance engine for Honda CR-X

Honda's CR-X is offered in Japan with a four-valve 135-HP engine, the most powerful 1.6-liter built there. Targeting racing enthusiasts (Honda had a Formula 2 champion this year), the company is also offering the Civic hatchback with the twin-cam engine.

Honda Civic, CR-X to have four-valve engine in Japan

TOKYO. — Hoping to cash in on its success in Formula 2 racing in Europe, Honda has added a four-valve engine for its Civic hatchback and CR-X.

The engine is designed to closely resemble the Formula 2's and has a pair of curved cam covers, as on a racer.

The power output of 135 BHP —high for Honda—makes it the most powerful 1.6-liter engine built in Japan.

With a bore and stroke of 75 x 90 mm, compared with 74 x 86 mm for the 1.5-liter, the 1.6 liter-engine does not start off in the conventional short-stroke mold for a high-performance unit. But it does retain the lightweight aluminum cylinder block of the smaller unit.

There is a toothed belt drive to the twin OHC, which does not actuate the valves directly. Instead, the cams bear on short finger rockers, which Honda claims results in a very compact cylinder head. The arrangement also allows screw tappet adjusters to be used.

An unusual feature is that the camshafts are cast hollow, so they are light and good lubrication of the rockers can be provided.

Honda's PGM-FI system, now with tuned-length inlet ports, is used, and there is no CVCC chamber, since fuel consumption is irrelevant.

It all adds up to 135 BHP (JIS) at 6,500 RPM, with maximum torque of 110 pounds-feet at 5,000 RPM. Clearly, the engine will give the Civic and the smaller CR-X amazing performance.

In Japan, the Toyota Corolla twin cam coupe will be the CR-X's main competitor. It develops 130 BHP (JIS), but is 140 pounds heavier.

Honda has also unveiled a four-wheel drive version of the Civic five-door Shuttle.

However, 4WD is not always engaged, as on the Audi Quattro, but only when a button on the instrument panel is pressed, as in the Subaru and Mitsubishi systems.

Honda has introduced these models in an attempt to boost sales of the Civic range, now running at about 70 percent of schedule, or 8,000 a month. The company has increased the overall sales target for the Civic to 12,500, which includes 2,000 twin OHC models and 500 4WD Shuttles.

The CR-X, despite its success in the U.S., has also failed to catch on in Japan. The monthly schedule for the smaller car has been downgraded by 500 to 1,500 a month, of which 900 are expected to be twin-cam models.

HD registrations for nine months rise 54.5 percent

Continued from Page 16

percent over the 13,204 tallied in the same month last year.

Registrations of Group 7 trucks through the first nine months totaled 48,801, up 34.76 percent over the 36,212 in the year-earlier period.

The Group 8 count through September was 92,947, an increase of 67.96 percent over last year's 55,372.

International continued to lead Ford in heavy-truck registrations with a nine-month total of 32,151 units, compared with 27,916 for runnerup Ford.

In September, International increased its lead over Ford by more than 700 units.

International also was No. 1 in Group 8 registrations with 21,204 tallies through September, whie Ford was the Group 7 leader with 19,126 units.

Dealership aide accused of theft

EASTON, Pa. — Howard Alpaugh, an employe of Young Volkswagen - Mazda - Dodge in suburban Palmer Township, was accused of stealing more than $80,000 in cash and checks from the new-car dealership and was arraigned in district court.

He was charged with theft by failure to make required disposition of funds. Alpaugh was supposed to deposit the money and checks in several area banks.

Alpaugh was arrested by State Police in Honesdale, Pa., for allegedly driving under the influence of liquor. After making a routine background check on Alpaugh, state police discovered that local police had a warrant for his arrest. He allegedly told police he threw the checks out of the car and spent most of the cash.

Sales rise 6 pct.

Honda quarter profits up 30 pct.

TOKYO. — Honda Motor Co., Ltd., reported a 30 percent increase in profits during the second quarter on only slightly higher sales.

Net income for the quarter ended Aug. 31 was 29,505 million yen, or $122 million at current exchange rates, compared with 22,774 million yen in last year's second quarter.

Sales were 677,172 million yen, or $2.8 billion, up 6 percent from last year's 640,312 million yen. Of the total sales, $2.0 billion, or 72 percent, came from exports with the rest from Honda's home market in Japan.

Total unit automobile sales for the quarter were up 7 percent to 313,000 units. Of the total, 211,000 were sold overseas, up 13 percent from last year, while unit sales in Japan were off 6 percent. Automobile sales in currency were 398,630 million yen, or $1.6 billion, up 13 percent from last year's second quarter.

• For the first half of the fiscal year, net income was 58,088 million yen, or $240 million, up 34 percent from last year's 43,424 million yen.

First-half sales were 1,346,381 million yen, or $5.6 billion, up 12 percent from last year.

Automobile sales rose 13 percent to 623,000 units in the first half, with overseas sales increasing 21 percent to 425,000 units and sales in Japan dropping 1 percent. In currency, auto sales were 791,864 million yen, or $3,273 million, up 23 percent.

Automobiles sales for the quarter and half represented 59 percent of Honda's total sales.

Honda said improved earnings were due to increased sales of automobiles and power products, though motorcycle sales remain down from last year, as well as to reduced interest expense and increased interest income.

Quality work earns award

Harold A. Poling, with plaque, executive vice president, Ford North American Automotive Operations, presents Uniroyal, Inc., Opelika, Ala., with Ford's Q1 Preferred Quality Award at a luncheon in Dearborn. Representing Uniroyal are, from left: Claude H. Allard, corporate vice president, automotive worldwide; Don Votaw, director quality assurance, and Lindsay Wylie, vice president, automotive sales. Uniroyal's Opelika plant produces tires for Ford vehicles.

Ford backs effort to find machine-to-machine language

By Roger Rowand
Engineering Editor

The future of factory automation has become even brighter with Ford Motor Co.'s strong endorsement of industry efforts to create a common machine-to-machine language called Manufacturing Automation Protocol (MAP).

A protocol is a method of coding and transmitting information.

MAP will provide standardized communications among computers and programmable devices from a variety of suppliers, Ford said.

General Motors has been the leader in the auto industry in efforts to spur the evolution of MAP. It has had a task force on the project since 1980. Chrysler Corp. has been supporting MAP efforts.

With Ford's endorsement, MAP becomes a more certain force in the automation trade.

"For our plants to evolve toward factories of the future, we must link the many stand-alone devices and pools of information into fully integrated systems with communications networks," said Paul F. Guy, director of Ford's Engineering and Systems Office.

"The standardization potential represented by MAP is a breakthrough in data communications," said S. I. Gilman, executive director of Ford's Information Resources Management Office.

"We are encouraging our vendors or potential vendors of intelligent devices, software, machine tools and other systems components to incorporate MAP standards in their products. Their actions can accelerate the realization of multivendor, computer-integrated manufacturing facilities," Gilman said.

Ford said MAP will, among other things, allow wider choice in suppliers due to communication compatibility. Also, its use will shorten lead time in designing and implementing integrated manufacturing systems.

"Ford engineers will be able to concentrate on selecting the best equipment for a given application, regardless of vendor, without concern over its ability to communicate with other elements of the manufacturing system," Guy said.

The Ford men said a high procurement priority in evaluating manufacturing systems for use in Ford plants will be the compatability of these systems and their computer-controllers or monitored components with MAP specifications.

Ford asks its suppliers to join in push for quality

DEARBORN. — Ford Motor Co.'s North American Automotive Operations has asked its suppliers to join its push for quality.

"It's not enough for quality to be Job One at Ford — it also must be Job One with our suppliers," said Clinton D. Lauer, executive director of NAAO production purchasing.

"We recognize that our suppliers already have come a long way in improving their quality," Lauer said.

"In fact, Ford's 57-percent average quality improvement for cars and trucks versus 1980 vehicles could not have been achieved without high-quality parts from the 2,300 supplier locations doing business with NAAO."

A key element in quality improvement is the application of statistical analysis to the development and maintenance of proper manufacturing techniques.

This system focuses on defect prevention, rather than detection. It increases quality and productivity by minimizing redundant testing, inspection, product rework and materials scrappage, according to Lauer.

Ford and the American Supplier Institute have conducted 160 seminars in statistical methods over the last 3½ years for more than 7,500 supplier personnel. Many others have learned about statistical methods through universities, consultants and internal training programs.

In order to give suppliers a quality benchmark to shoot for, in August, 1981, Ford launched a program to encourage suppliers to meet Ford's quality standards. Suppliers who meet this benchmark receive Ford's Q1 Preferred Quality Award.

"To qualify for the award," Lauer said, "a supplier must have an excellent Ford quality rating and an effective quality assurance system that includes the use of statistical techniques.

"In return, Ford gives the supplier preferred sourcing recognition. He is trusted with responsibility for his own quality, rather than having Ford check on it. And when he receives a major contract, he participates in the early planning stages of the vehicle program of which he is a part," Lauer said.

Recently, 50 additional supplier locations earned the Q1 Award. Harold A. Poling, executive vice president of Ford's North American Automotive Operations, saluted the new recipients at an awards luncheon.

Thieves take $135,000 from Nissan Mexicana

CUERNAVACA, Mexico. — The Nissan Mexicana assembly plant, on the outskirts of Cuernavaca in the Civac industrial zone, was assaulted by eight thieves armed with machine guns and heavy automatics.

They got away with 27 million pesos ($135,000) of the biweekly payroll.

Using false beards and mustaches as disguises, the eight worked swiftly and professionally.

Security police were overcome and the thieves headed for the paymaster's office, where the payroll had been prepared for distribution.

A Maverick and a Fairmont station wagon parked in front of the plant, were the getaway cars.

Police said the bandits were "professionals." Telephone lines were cut and the entire operation took no more than three minutes.

A wave of robberies has hit Mexico in the past year including banks, business firms and supermarkets. This was the first assembly plant to be robbed.

Depreciation rules proposed for autos used in business

WASHINGTON. — The Internal Revenue Service has proposed temporary regulations governing the tax depreciation of business-use automobiles, as specified under the newly enacted Tax Reform Act of 1984.

The IRS rules reflect those written into a House Senate compromise limiting the amount of business-vehicle depreciation to no more than $4,000 in the first year and $6,000 in subsequent years.

The new guidelines allow depreciation only on the percentage of the vehicle used for business with a business-use test of more than 50 percent before any accelerated depreciation can be taken.

Vehicle-use claims must be supported by a detailed log of how the vehicle was used during the tax year, according to the proposed regulations. The 50-percent test must also be met before qualifying for any portion of a one-time-only investment tax credit of $1,000.

On vehicles that are used less than 50 percent for business, owners will still be allowed to take a straight line depreciation, but will be denied the more rapid depreciation allowed under the modified accelerated cost recovery system.

NADA, the American International Automobile Dealers Assn. and HVMA have all said they are analyzing the IRS regulations and will pass their findings on to members as soon as they are completed.

IRS is asking for comments on some portions of the rules, including which types of vehicles should be excluded from the regulations, how business versus personal use should be measured and how tax withholding should be handled for employes who are provided with vehicles as part of their compensation.

The possibility of a public hearing on these matters was raised in the IRS notice.

ITA seeks to overcome subsidy

Mexican auto glass may cost more

WASHINGTON.—Automotive glass made in Mexico is going to cost U.S. car makers more money if a preliminary countervailing duty determination is made permanent by the Commerce Department's International Trade Administration.

ITA has tentatively found that the Mexican automotive glass industry is receiving subsidies and grants from the Mexican Government estimated at 2.61 percent ad valorem.

On November 1, the trade agency directed the U.S. Customs Service to require a cash deposit of bond on all Mexican-fabricated automotive glass entering the U.S. equal to the 2.61 percent subsidy margin.

The agency expects to make its final determination by Jan. 9.

The action was brought last year by PPG Industries, Inc., on behalf of the U.S. fabricated automotive glass industry. Mexico is not a party to the General Agreement on Tariffs and Trade, which could have handled the proceeding.

Ford Motor Co. and Libbey-Owens-Ford objected to the ITA investigation, but were excluded by ITA from consideration as part of the domestic automotive glass industry since they are major importers of Mexican auto glass.

ITA officials said agency investigators will next visit with Mexican Government officials and may make plant inspections to determine whether ITA's subsidy estimates are correct. Should the initial ITA findings prove correct, ITA will, in all likelihood, move to make the higher duties permanent.

The trade agency said it believes Mexican auto glass makers receive government loans at below market interest rates. ITA also believes the Mexican auto glass makers are granted tax certificates to pay federal taxes for five-year periods intended by the Mexican Government to spur productivity investments.

The automotive glass subsidies issue will be the subject of a public hearing to be held by ITA at the Department of Commerce in Washington Nov. 29.

Japanese Automotive Statistics: January-August 1984-83

Production (1)

	Passenger Cars	Trucks	Buses	Total
8 months '84	4,719,607	2,830,081	42,279	7,591,967

% change	0.8%	3.9%	1.2%	2.1%

All figures are on unit basis. (1) Production figures are as reported by all automobile manufacturers in Japan. (2) Size definitions used here are according to Japanese classification by piston displacement which are as follows: Regular: 2,001cc and more; Small: 551cc to 2,000 cc: Mini: 550cc and less. (3) New vehicle registration (in Japan) figures are compiled by Japan Mini-Vehicle Assn. and Japan Automobile Dealers Assn. All others sourced by JAMA.

Japanese vehicle production increases 7 pct. for month

WASHINGTON, D.C. — Japanese production of motor vehicles increased 7.1 percent in August 1984 to 774,928 units compared to 723,661 units produced in August 1983. This August 1984 total reflect 473,071 passenger cars, up 0.7 percent; 296,206 trucks, up 18.3 percent, and 5,651 buses, up 62.6 percent.

Total exports to the world increased 14.2 percent in August 1984 from a year earlier to 469,153 units. Passenger car exports increased 11.1 percent to 305,022 units. Truck and bus exports increased 20.1 percent and 36.0 percent respectively. Overall motor vehicle shipments to the U.S. increased 21.8 percent, from 160,759 units in August 1983 to 195,753 units in August 1984. Passenger car shipments to the U.S. were 141,505 units, a 13.1 percent increase from August 1983.

New vehicle sales in Japan's domestic market decreased 4.3 percent in August 1984 to 296,812 units. Passenger car sales registered an 8.4 percent decrease, truck sales were up 1.1 percent and bus sales were up 2.1 percent in August 1984.

Statistics for the January-August 1984 and 1983 periods are in the chart above.

Earnings rise 23 pct. for EDS, GM's new unit

DALLAS. — Electronic Data Systems Corp., General Motors' newest subsidiary, reported a 23-percent increase in profits for the quarter ended Sept. 30.

The Dallas-based EDS said net income was $20.7 million, up from last year's $16.8 million.

Sales were up 33 percent at $238.5 million compared with last year's $179.1 million.

For the first nine months of 1984, EDS showed net income of $57.6 million on sales of $665.4 million, up from last year's income of $47.7 million on sales of $537.9 million.

EDS officially became a subsidiary of GM on Oct. 18 under a $2.5 billion acquisition arrangement. EDS will be responsible for GM's data processing and communications operations. The new subsidiary also will process financial transactions and health-care claims for GM.

Hunt appointed to AIADA post

WASHINGTON. — David A. Hunt has been named vice president for operations and legal affairs by the directors of the American International Automobile Dealers Assn.

Hunt has been with the trade association since mid-1983 as director of operations.

Before joining AIADA, Hunt was director of public affairs of the Air Conditioning and Refrigeration Institute. Prior to that, he was associate legislative counsel for NADA.

Award for Ciccolo

Edward Sansevero, right, district manager, Volvo of America Corp., presents a citation to Raymond J. Ciccolo, of Volvo Village, Newton, Mass. Volvo Village, established in 1956, is the oldest Volvo dealership in New England. Ciccolo is also president of Boston Volvo, Cambridge, Mass., and Village Chevrolet, Needham, Mass.

Sun develops 2-gas automotive exhaust analyzer

CRYSTAL LAKE, Ill. — A two-gas automotive exhaust emissions analyzer has been introduced by Sun Electric Corp.

Called the Infra Two, the unit is said to meet BAR-74 specifications as well as 207-b standards of the federal Clean Air Act. The unit features color-coded, twin D'Arsonval back-lighted meters and a base-mounted pump which both dampens vibrations and improves the unit's overall stability, Sun said.

According to Sun, the Infra Two can serve both as a stand-alone emissions analyzer and—to a limited degree—as an engine performance troubleshooter.

The analyzer is said to be fast-acting, with a response time of 10 seconds to 90 percent of the final reading, and 15 seconds to 95 percent of the final reading.

Dominican Republic to buy Dina buses

MEXICO CITY. — Diesel Nacional (Dina) won a contract in international bidding to provide the Dominican Republic with passenger buses.

In order to fulfill the commitment made with the Dominican National Chamber of Transport and Communications, Dina increased its assembly productivity by 25 percent and hired 429 additional plant employes.

Dealer gift to MD telethon

John McCallan, left, and Don Reid, right, owner of Pearson Ford, San Diego, prepare a check for $14,200 for the San Diego Chapter of the Muscular Dystrophy Assn. John Kennedy, center, San Diego telethon chairman, accepted the check. Pearson Ford raised the funds during an 11-day Sale-A-Thon in which the dealership pledged $100 for every new and used car sold.

Study finds utility vehicles have higher rollover rates

WASHINGTON. — The Insurance Institute for Highway Safety reported that a study it sponsored at the University of North Carolina's Highway Safety Research Center indicates that utility vehicles have a rollover rate more than five times that of automobiles and four times that of pickup trucks.

A 1981 study by the North Carolina unit and a 1980 Michigan study resulted in nearly identical conclusions.

The latest study was based on nearly 600,000 crashes in North Carolina from 1979 through 1982.

The overall rollover rate for utility vehicles was 70.8 per 10,000 registered vehicles. The American Motors CJ-5 (last produced in the 1983 model year) had the worst rollover rate of 111.4 per 10,000, according to the study.

The AMC CJ-7's rollover rate was 94.7, followed by the Toyota Land Cruiser rate of 81.8 rollovers per 10,000.

While subcompact cars had the worst rollover rates for automobiles, 27 per 10,000 vehicles, the overall rollover rate for cars was 13.6 per 10,000, the study reported.

• Pickup trucks averaged 15.3 rollovers per 10,000 vehicles. Toyota and Datsun pickups had rollover rates of 37.2 and 22.4 per 10,000.

A response by American Motors said: "Any vehicle, regardless of make or type, can be driven beyond its design limitations in a reckless manner causing an accident.

"We have not had a chance to thoroughly review the study," the statement continued, "but we understand it's merely an update of a 1981 report that was erroneous, incomplete and biased.

"It was severely flawed because it did not take into account important variables," the AMC statement said.

Jerry Sloan, AMC vice president of public relations, added, "You can't look at something like road conditions in a three-box table."

Donald Reinfurt, of the Highway Research Center, said that a utility vehicle should be driven with caution. He said that's something that the ads for the vehicles don't emphasize.

Beginning with the 1985 model year, manufacturers of small utility vehicles have been ordered by the NHTSA to display labels warning drivers of the rollover tendencies.

New England Milesto

Ford dealer Ben Ristuccia, left, of Wilmington Sales. Inc., Wilmington, Mass., receives congratulations and a commemorative pin marking the 25th anniversary of his dealership from Donald C. Minogue, Ford Division's Boston district manager.

HDs with sleeper cabs recalled by Freightliner

PORTLAND. — Freightliner Corp. is recalling approximately 2,300 of its Class 8 heavy-duty trucks to correct a defect in the door latch of the cab sleeping compartment.

Affected are conventional trucks built from February through August, 1984. Freightliner cautioned that the outside door to the sleeping compartment could come unlatched without warning, and occupants of sleeper boxes should avoid leaning against those doors until modifications are made.

Rebound to follow late '84 slowdown

RV leaders see years of growth

Continued from Page 1

ued slow trend to motorized and a 5 percent inflation factor," he said. "This should develop a 15 to 20 percent increase in dollar volume for the industry.

"The most aggressive dealers and manufacturers will thrive in this environment," he added.

Fleetwood Enterprises, Inc., is optimistic for 1985 after a flat fourth quarter this year.

Shipments in the final months, according to James V. Sheldon, Recreational Group marketing director, probably will be somewhat lower than a year ago "because dealers last year were adding significantly to their inventories, while this year their inventories are somewhat higher than normal."

"In the spring," he added, "we expect sales to return to normal levels based on increased consumer confidence, ample availability of gasoline and acceptable finance terms."

David W. Tarrant, Ford Division RV sales manager, looks for 1985 sales to be about the same as this year's.

"Overall, the market is going to be good," he said. "But it's going to be more in line with actual customer demand than with the inventory building that has been going on in the industry over the past 18 months or so.

"The distribution pipeline can stand only so much inventory, and in most cases, the pipeline is full," he added.

John K. Hanson, chairman, Winnebago Industries, Inc., said motor-home sales should continue to improve throughout the 1980s.

"Products are being made more affordable and feature contemporary styling and amenities," he added. "And the post-World War II baby boomers — now approaching middle age — offer the largest, most affluent market for recreational vehicles ever experienced in the U. S."

Van converters also look for continued strong growth in sales with the entry of the Ford and General Motors downsized vans and the demise of some big station wagons and passenger cars.

"The outlook for 1985 and balance of the decade is favorable for the high-quality luxury van," said Don Cuzzocrea, president, Starcraft Co. "This type of vehicle has now established a solid market foothold with the upper middle class in the U. S. and Canada."

Conrail acquires piggyback trailers

PHILADELPHIA. — Consolidated Rail Corp. is acquiring 650 45-foot-long, 102-inch-wide highway truck trailers, valued at $9 million, to expand its piggyback fleet.

The 650 trailers have a 96-inch wheelbase which permits them to be used with existing piggyback flatcar fleets.

Piggyback service, which is the movement of truck trailers and marine containers on railroad flatcars, is one of the fastest growing segments of rail freight transportation, Conrail said. Conrail registered a piggyback traffic volume increase of nearly 17 percent in 1983 over 1982.

Thanksgiving holiday cuts auto production to 99,247

By Louise Kertesz
Detroit Reporter

Last week's projected U. S. auto production of 99,247 units was down 43.38 percent from the previous week's 175,275, due to the Thanksgiving holiday.

Last week's output, which was 5.93 percent better than the year-ago week's 93,695, also reflected the halting of production at American Motors' Kenosha plant for inventory adjustment.

Year-to-date, 7,104,175 cars have been assembled, 16.15 percent more than the 6,116,305 completed at this point last year.

Last week's estimated production was shared as follows: General Motors, 56.93 percent; Ford Motor Co., 24.64 percent; Chrysler Corp., 15.32 percent; American Honda, 1.90 percent, and Volkswagen of America, 1.21 percent.

No overtime was scheduled at assembly plants during the Thanksgiving weekend.

Schomp to build

ENGLEWOOD, Colo.—Ralph Schomp Oldsmobile-Honda-BMW has broken ground for a new $4-million dealership here.

Makers produce 39,159 trucks in holiday week

U. S. truck makers pegged last week's output at 39,159 units, down 39.87 percent from the previous week's 65,126 because of the Thanksgiving holiday.

Last week's output was 37.41 percent better than the year-ago week's 28,495.

So far this year, 2,829,831 trucks have been built, 30.52 percent more than the 2,168,176 completed last year at this time.

No overtime was scheduled last week during the Thanksgiving holiday.

Output in Canada slips 12 pct. for cars and trucks

Canadian car makers targeted production of 20,370 units last week, down 12.10 percent from the previous week's 23,175 and down 4.18 percent from the year-ago week's 21,259.

Year-to-date, 949,462 cars have been assembled, an increase of 8.40 percent over the 875,932 completed last year at this time.

Last week's estimated production of 16,375 trucks was off 12.41 percent from the previous week's 18,695, which was close to the year's high of 18,853 units built during the week ended June 23.

Last week's output, up 10.95 percent over the year-ago week's 14,758, includes an estimate by International Harvester Co., although the company was on strike at presstime.

Chrysler Corp.'s plant in Windsor, Ont., completed 1,561 Plymouth Voyagers, 1,574 Dodge Caravans and 461 Mini Ram Vans last week, bringing the total of T-115s assembled this year to 211,032.

Coming from Ford

Slick Ford Taurus for 1986

The European flavor of the Ford Taurus for 1986 is clearly apparent in the headlamps, the windshield's steep rake and the emphasized body-side sculpturing. Unofficial photograph shows Ford stylists have not abandoned the jelly-bean look their cars started taking on in 1983.

Jim Dunne photos

Smoother Tempo from Ford

Unoffical photograph of a 1986 Ford Tempo front-end shows it has taken on a new, less-cluttered look with altered grille opening, newly shaped parking lights and an all-new, more-symmetrical-appearing composite bumper system.

EDS is the 'rocket' in GM reorganization

By Marjorie Sorge
Labor Editor

WARREN, Mich. – Electronic Data Systems, General Motors' new data processing acquisition, is the rocket that will guide the company's reorganization.

EDS will consolidate GM's sprawling data processing system, make a substantial amount of money for the company, cut health care cost increases by more than the 10 percent predicted, set up the Saturn project and get GM more military business, according to Kenneth G. Riedlinger, EDS senior vice president in charge of the subsidiary's GM operations.

EDS will also profit form the acquisition, according to GM Chairman Roger B. Smith.

"They just landed the biggest account in their history," he said. "This is going to double the size of them.

"We've got stuff out there right now that is just a gold mine for them. We have been so busy developing and using it for ourselves we never had time to sell it ouside. But I can tell you that there is stuff that is processing gears through Saginaw Steering Gear right now that is equally applicable to the Kellogg Co. to make cereal. So we have tremendous product for them to sell," he said.

Standardizing the GM operations will include EDS setting up a Canadian subsidiary to handle GM's Canadian needs and taking over the overseas data processing responsibilities.

When the data processing system is totally consolidated, all dealers, suppliers, factories and other GM operations worldwide will be using a common computer language. It could follow that the entire auto industry will fall in line with the common language since many GM suppliers also supply the other auto makers.

"The whole thing ties together data processing and telecommunications across the world," Riedlinger said, indicating that GM could put up its own satellite in the near future to handle its telecommunication needs.

"EDS is clearly a vehicle to do those things. We don't know anything about building cars, but we

Industry would lose two major breaks

Tax plan could be costly

By Jake Kelderman
Washington Reporter

WASHINGTON. – Auto making and some of the other basic industries of the U.S. could be the losers should the tax simplification plan offered by the Treasury Department last week become law.

Under the plan, the capital-intensive business of making cars and trucks would lose both the investment tax credit (ITC) and the Accelerated Cost Recovery System for accelerated depreciation that have been instrumental in the revitalization of plants, equipment and competitiveness.

And although the companies will see their tax rate drop from 46 percent to 33 percent; be allowed to deduct one half the dividends they pay to their shareholders, and be allowed to adjust their interests and inventories for inflation, analysts still expect that by 1990 corporate America will pay about $45 billion more in taxes.

"What we are trying to do by this plan," Treasury Secretary Donald Regan said, "is make the tax system not only simpler, fairer and more economically efficient, but also to get individuals and businesses to make their spending, saving and investment decisions on economic, not tax grounds."

Regan said the investment tax credits and accelerated depreciation adopted by Congress to spur investment in 1981 introduced a major distortion into the economy. They favor capital-intensive industries at the expense of the service industries which increasingly describe the norm of corporate America, according to Regan.

This proposal is aimed at correcting that and many more distortions, he said.

But John Meager, of Basic Industries Coalition, predicted that if the Treasury proposal is adopted the basic industries of the U.S. will become even more vulnerable to foreign competition and pressure for protectionist measures will increase.

"Foreign governments give significant tax advantages to exporters that the U.S. Government offsets in part through the investment tax credit and accelerated depreciation provisions of 1981," he said. "If we drop those, I guarantee protectionism will become popular."

Indeed, Chrysler Corp. and Ford Motor Co. have insisted for four years that Japanese auto makers enjoy a considerable tax advantage in the U.S. market because the Japanese Government rebates taxes to them when they export their vehicles.

Treasury officials suggested, however, that corporate America look carefully at the proposal before condemning it. Because the tax load on most individuals would decline, funds available for car purchases might well increase.

At the dealer level, the most immediate impact of the Treasury's tax proposal would be on the leasing business and inventory carrying costs. Loss of the investment tax credit would make leasing more expensive to customers because the dealer could no longer take the 10-percent credit now allowed.

Offsetting that, however, would be the Treasury's proposal to drop the LIFO (last-in, first-out) inventory accounting procedures conformity requirement that many firms believe puts them at a competitive disadvantage in attracting investment funds. Approximately 40 percent of all auto dealers use LIFO.

Meanwhile, whether the tax simplification plan is ever adopted is up in the air. Treasury Secretary Regan himself has suggested that the plan is "open to change."

President Reagan has said only that he will take a look at it, and on Capitol Hill both House and Senate members in key committees suggest the Treasury proposal is but a starting point and that much change lies in the wings.

Neither Ford nor Chrysler had a comment on the tax plan. General Motors Chairman Roger B. Smith praised the proposal, though, saying it "is a move in the right direction."

Said Smith, "GM believes that the tax system should be as neutral as possible so as not to distort the allocation of resources within the economy. Also, there is a need for simplification."

Mazda to construct Detroit-area plant

Mazda Motor Corp. will build an entirely new auto assembly plant on a site adjacent to Ford Motor Co.'s vacant Michigan Casting Center in Flat Rock, Mich.--thereby becoming the fourth Japanese automaker to situate vehicle assembly operations in the U.S.

Company officials announced the decision at a press conference in Detroit last Friday. Construction of the $450-million facility is slated to get under way next spring and production is due to begin in the fall of 1987.

At full production, the Flat Rock plant will be capable of turning out 240,000 units annually and will employ about 3,500 people. Mazda Managing Director Hirotaka Iida said the firm is negotiating to sell Ford Motor Co. part of the plant's annual output. However, he took issue with speculation that the Flat Rock project represents a joint venture between Mazda and Ford, which owns 25 percent of the Japanese company.

"I want to correct this false speculation," said Iida. "The plant will be designed, built, operated and owned by Mazda Motor Corp. alone."

Iida said the new facility will enable U.S. Mazda dealers to expand sales. But to achieve necessary production scales, he said, it may become necessary to sell part of the production to its U.S. partner.

According to United Auto Workers President Owen Bieber, the union has reached an understanding with the company.Mazda officials declined to offer details about products to be built at Flat Rock.Iida said the company will acquire Ford's idle engine casting plant, which closed in December, 1981. Part of the casting center will be demolished to make room for the Mazda reportedly also considered building a plant from the ground up in Greenville, S.C., or Omaha, Neb., before deciding to locate a facility in Michigan.

Week's output highest of year

By Louise Kertesz
Detroit Reporter

U.S. car and truck makers scheduled their highest production of the year last week.

Overtime at 28 assembly plants contributed to the record build.

The targeted output of 186,230 cars was better than the previous weekly high for the year of 181,909, reached in the week ended March 10.

Slated production of 72,514 trucks topped the former 1984 peak of 70,166 reached in the week ended Nov.10.

breaking news

Honda Acura plans detailed

DALLAS. – Acura, American Honda's second distribution network, is tentatively scheduled to begin distribution in April, 1986, selling two ranges of automobiles, the company told its dealers here. The Honda/Acura setup has been designed to sell as many as 800,000 cars by 1990. First-year sales are targeted at 45,000 units through 50 to 60 dealers. Eventually, that is to grow to 600 dealers and 250,000 to 300,000 units. Honda is gunning for the No. One position in import-car sales, it told dealers. Five exterior and two interior mockups were shown.

GM ends COLA for some salaried workers

DETROIT. – General Motors will end cost-of-living adjustments for about 15,000 of its 125,000 salaried workers on Jan.1 and will instead fold the money into the base salary, raising it about $6,200. Merit raises also will be increased; GM's matching contribution to the Savings-Stock Purchase Program will be raised, and Preferred Provider Organizations (PPOs) will be added to the available health care programs.

Smith expects GM's sales to hit $100 billion by 1990

By Marjorie Sorge
Labor Editor

General Motors will reach $100 billion in annual sales by 1990, according to Chairman Roger B. Smith.

That, incidentally, is the year Smith will retire from the company.

GM had sales of more than $75 billion in 1983 and could top $81 billion for 1984. For the first three quarters, it had sales of $63 billion with $18 billion in the third quarter.

"Most of the growth is going to come in the automotive business," he told AUTOMOTIVE NEWS in an interview last week.

According to Smith, the non-automotive area will grow to about 10 percent by 1990. It is currently about 5 percent. All growth in the non-automotive area will be "plus business," he said.

GM's capital expenditures will be more than $8 billion for 1985, up from $6 billion in 1984, he said.

About 85 percent of that money will be spent in the U.S. and Canada with the rest slated for overseas.

Smith also forecast 1985 industry sales at 15 million, 10.7 million cars and 4.3 million trucks. The auto industry has not had a 15-million-unit sales year since 1978.

The industry will sell about 14.5 million units in 1984, 10.4 million cars and 4.1 million trucks, he said.

• Smith expects all four quarters of 1985 to be good ones and believes that if the Reagan Administration can get the budget and trade deficits under control, there could be "14, 15 or 16 good quarters coming."

While he would not estimate how much of the '85 market GM will take, Smith did say the new C cars being built at Wentzville, Mo., and Orion Township, Mich., and the new E and K models coming from the Detroit plant scheduled to open next year will give GM some good products to "take as many (sales) as possible."

GM will also be selling the new Suzuki Sprint and the Isuzu Spectrum, its new N-cars, the GM-Toyota joint-venture Nova and its new minivans in 1985.

The E- and K-cars are the new front-wheel-drive Cadillac Eldorado and Seville, the Buick Riviera and the Oldsmobile Toronado, and the N-cars are the Pontiac Grand Am, Olds Calais and Buick Somerset Regal.

GM will sell about 1.7 million vehicles in the first quarter of 1985, about 1.3 million cars and about 400,000 trucks, according to Smith.

GM is planning more diversification to increase its non-automotive business. Non-automotive operations could account for at least 20 percent of GM's dollar volume by 2000.

Electronics will likely be the biggest area of diversification, Smith said, especially with the recent acquisition of Electronic Data Systems (EDS).

"We can't go into basket weaving," he said. "We have to have something that is high-tech because we are a high-cost company for labor."

GM plans to continue its aggressive capital spending programs but also is watching the flat-rate tax proposal currently in Congress.

"Certainly the elimination of the Accelerated Cost Recovery System and the investment tax credit would not help us," he said. "The little pencils are flying right now down in the tax area trying to figure it out, and I can tell you what they are going to tell me – it is too early to tell. But the principle of a flat-rate tax is the right direction to go."

Smith said he is for the plan as long as it is not a "revenue enhancement measure that is really a tax reform."

Ready to rally

Here is one of the first entrants for the Paris-Dakar rally, which begins Jan. 1. Called Speed Car, it is made of Kevlar and powered by a Honda motorbike four-cylinder engine.

Azcuenga moves into a top post from FTC staff

WASHINGTON. – President Reagan has appointed Mary L. Azcuenga a Federal Trade Commissioner.

The recess appointment will run until the end of the first session of Congress or until she is approved by the Senate.

Azcuenga will be the first commissioner to move up directly from a staff position with the commission. Most recently, she was assistant general counsel for Legal Council, but she has held various legal positions at the FTC since September, 1973.

Azcuenga's political affiliation is given as "independent." She replaces retired Commissioner Michael Pertschuk.

Bertone appoints two importers to succeed Bricklin

NEW YORK. – Bertone S.p.a. announced the appointment of two area importers for the U.S.

Southeast International Imports, Accokeek, Md., headed by John Bednarik, was named the importer for Pennsylvania, Virginia, West Virginia, North Carolina, South Carolina, Maryland, Delaware, Georgia and the District of Columbia.

Covering the Northeast will be R.V.D., Inc., Ramsey, N.J. Headed by Ray Van Doren and Leigh Rzasa, this importer will cover Maine, New Jersey, Vermont, Massachusetts, New Hampshire, Connecticut and Rhode Island.

Both were former distributors when International Automobile Importers, Inc., Malcolm Bricklin's firm, imported the Bertone sports car.

The move by Bertone is part of a reorganization after the company parted with Bricklin.

Also Bertone expects it will complete and agreement with Far West International this month for several southern and western states. Far West was mentioned as an importer when Bertone and Bricklin parted ways.

GM plant applies for subzone status

WASHINGTON. – Gereral Motors' Fairfax (Kans.) assembly plant has applied for foreign trade subzone status with the Commerce Department's Foreign Trade Zones Board.

Domestic deliveries top '83 by 28 pct.

Sales rebound in mid-November

Jenny L. King
Staff Writer

The domestic auto industry rebounded vigorously from its flagging sales, posting a 28.79-percent gain in mid-November after the 4.72-percent first-period decline and the modest 3.82-percent increase for all of October.

U.S. new-car sales for the Nov. 11-20 period totaled 225,196, best for the period since 1978 when 248,933 units were reported.

Sales were up 28.79 percent from 174,861 a year earlier. With eight selling days in the period both years, the daily rate increase also was plus 28.79 percent, to an average of 28,150 from 21,858.

Sales thus far this calendar year, from Jan. 1 through Nov. 20, were up 19.73 percent, to 7,204,124 from 6,017,203.

Chrysler Corp. reported the heftiest sales gain of the Big Three, with a 62.25 percent increase. Chrysler sales numbered 29,428, compared with 18,138 for the same period a year earlier.

Ford Motor Co. sales were up 49.94 percent, to 60,568 from 40,395. General Motors, back on track after the scattered labor problems that affected its fall production, reported a 16.62 – percent sales gain, going to 125,495 from 107,614.

American Motors' mid-month sales were off 9.62 percent, to 4,700 from 5,200. Honda was up 147.35 percent, to 3,693 from 1,493, while Volkswagen dropped 35.08 percent, to 1,312 from 2,021.

DOMESTIC SALES

	Nov. 11-20, 1984	Nov. 11-20, 1983
Renault Alliance-Encore	4,000 †	4,160 †
AMC	700 †	1,040 †
AMERICAN MOTORS	4,700 †	5,200 †
Chrysler	9,604	6,034
Plymouth	8,869	5,704
Dodge	10,955	6,400
CHRYSLER CORP.	29,428	18,138
Ford	39,501	26,891
Mercury	16,251	10,672
Lincoln	4,816	2,832
FORD MOTOR CO.	60,568	40,395
Buick	25,934	20,924
Cadillac	9,312	8,466
Chevrolet	41,713	32,479
Oldsmobile	28,448	30,288
Pontiac	20,088	15,457
GENERAL MOTORS	125,495	107,614
VOLKSWAGEN	1,312	2,021
HONDA	3,693	1,493
U.S. INDUSTRY TOTAL	225,196	174,861

† Estimate.

Market shares for the mid-month period were rearranged in favor of Chrysler, Ford and Honda. Chrysler climbed to 13.07 percent from 10.37 percent. Ford was up to 26.89 percent from 23.10 percent, and Honda expanded to 1.64 percent from 0.86 percent.

GM's 16.62-percent sales increase, well below the industry increase of 28.79 percent, cost the top auto maker almost six percentage points in market share. GM dropped to 55.73 percent from 61.54 percent. AMC was down to 2.09 percent from 2.97 percent. VW shriveled to 0.58 percent from 1.16 percent.

Only four makes suffered sales declines in the period compared with year-ago totals. Oldsmobile was down 6.08 percent, VW was down 35.08 percent, AMC was down 32.69 percent and Renault was off 3.85 percent.

Plymouth sales in mid-November were up 55.49 percent, Chrysler was up 59.16 percent and Dodge was up 71.71 percent. Ford Division was up 46.89 percent, Mercury was up 52.28 percent and Lincoln was up 70.06 percent.

At GM, Buick was up 23.94 percent, Cadillac was up 9.99 percent, Chevrolet was up 28.43 percent and Pontiac was up 29.96 percent.

Less chance seen for easing of EPA rules

Does Ruckleshaus exit create auto problem?

By Jake Kelderman
Washington Reporter

WASHINGTON. – The announcement last week that the EPA once again will have a new leader is likely to preclude any changes in current environmental regulations affecting the auto industry.

Auto makers had hoped legislation might be amended next year with easing of tailpipe emissions standards on CO pollution, the manner and extent to which cars could be recalled, the severity of heavy-duty vehicle emission standards and control of gray-market cars. With the departure of William Ruckleshaus, those prospects largely have been dashed.

That is because of both the departure of middle-of-the-road Ruckleshaus and the sure controversy that will surround the EPA in his absence.

Replacing Ruckleshaus will be Lee V. Thomas, a career bureaucrat, registered independent and current EPA assistant administrator for Superfund hazardous-waste disposal program. He was Ruckleshaus' choice for the job.

EPA sources said Ruckleshaus will leave the agency in January because of a desire to get back to private life and because he did not want to battle with Office of Management and Budget David Stockman over a reported 30 percent EPA budget cut. They also said he was reluctant to deal with the Administration's cool attitude toward environmental regulation.

Sources on key congressional environmental committees said that without Ruckleshaus to argue any EPA budget before their committees, the sledding was sure to be rough for the agency and the Administration.

The Clean Air Act was due for reauthorization three years ago. it had been thought Congress would move this year.

"If we've got controversy and people inimicable to the environment over there, you can forget that," a key staffer said.

While Hill sources praised Thomas' work in rebuilding the Superfund program in the wake of former EPA chief Anne M. Burford, they also questioned whether he has the political clout to resist budget cuts and policy changes that could weaken environmental enforcement.

Thomas said he will continue the policies and agenda set by Ruckleshaus. He said he is capable of defending the agency's integrity while being a "team player" in the Administration.

There is expected to be no opposition to his nomination, and he is expected to assume his new post in early January.

Japanese call for end of auto quota in U.S.

TOKYO. – Restraints on Japanese car exports to the U.S. should be killed once the current voluntary agreement to restrict shipments expires next March 31, according to leaders of the Japanese industry.

According to the government, the leaders said U.S. auto makers have no reason to seek continued export controls beyond next March in view of their robust profit picture.

The Japanesae makers have urged the government to turn down any U.S. request for continuing the voluntary agreement, the government said.

The makers asked for an end to the agreement at a meeting they had with Keijiro Murata, Minister of International Trade and Industry.

Later, Murata said he would deal "cautiously" with the matter.

Under the voluntary agreement, Japan is limiting its shipments of cars to the U.S. to 1.85 million units for the 12 months ending next March 31. The voluntary quota was first established in 1981.

In Canada, shipments of Japanese cars are limited to 18 percent of the market, with a ceiling of 174,000 units for fiscal 1984.

There has been agitation for ending the quotas in U.S. and Canada.

Biddulph collects food for needy

SANTA ROSA, Calif. – Biddulph Chevrolet here is sponsoring the Biddulph Holiday Spirit Drive in association with the Salvation Army Holiday Food Program.

The dealership's goal is to collect 10,000 canned and packaged foods for the Salvation Army to distribute to families throughout Sonoma County.

An early star

When International Harvester introduced the McCormick-Deering Farmall in the 1920s, it marked a breakthrough for tractor farming in the corn belt. As this 1929 ad shows, narrow wheels in front and high clearance ensured suitability for handling row crops. Sleek and agile for its time, the Farmall "Regular" ended forever the era of behemoth farm tractors.

Ford Aerostar intro pushed back to June

By Richard Johnson
Detroit Reporter

The Aerostar minivan, Ford Motor Co.'s answer to small van offerings from Chrysler Corp. and General Motors, will not go on sale until June and will be designated a 1986 model, according to a company spokesman.

The delay is the second this year for the sleek, rear-drive, garageable vehicle. The Aerostar was slated to go into production by late 1984, but last spring the debut was pushed back to April, 1985. Job One now rolls in early May, and public introduction follows in June.

The revised timetables have been attributed to difficulty in obtaining the proper tools and equipment to complete the $200 million expansion of the Hazelwood (Mo.) plant in suburban St. Louis.

"We're doing a complete renovation at St. Louis, and we are bringing in a lot of exotic, robotic-type stuff," the spokesman said. "It's just taking us a little longer than we thought to get it ready."

The Ford representative said the decision was made earlier this fall to designate the Aerostar a 1986 model at introduction. Previously, the van had been pegged as a 1985½ release.

"It is kind of hard to call it an 85½ unless it is out in March."

The Hazelwood plant is getting another 400,000 square feet of space to accommodate the Aerostar, which will join Chrysler's Dodge Caravan and Plymouth Voyager, and GM's Chevy Astro and GMC Safari as domestically produced downsized vans. Hazelwood previously turned out the Ford Crown Victoria and Mercury Grand Marquis, but production of those cars has been moved to Canada.

Dealers concerned by mortality for some

Rocky period seen for IH-Case deal

By Michelle Krebs
Financial Editor

DALLAS – International Harvester dealers predict the marriage of the company's agricultural equipment division to Tenneco, Inc.'s tractor business will start out like most marriages – rocky while the newlyweds adjust to living together.

At a meeting of IH dealers in Dallas last week, dealers generally were in favor of the marriage, though all expressed concerns about which of them would remain in business and what products they would have to sell.

Dealers agree that IH's abandonment of the farm equipment business it has been in for 153 years will allow the company to concentrate efforts on the truck industry and regain profitability while Tenneco becomes a major force in the farm equipment business.

Tenneco, a Houston-based conglomerate and parent company of the J.I. Case farm-equipment company, has agreed to purchase IH's farm-equipment business for $430 million – $260 million in cash and $170 million in preference stock.

At the dealers' meeting, there was a sense of resignation that something had to be done to keep IH alive.

"The alternatives were bleak. This is a new leaf in the book," said Wade Alderman, of Alderman, Inc., Lennon, Mich.

Most dealers were impressed with the financial strength of Tenneco, as touted by Tenneco executives at the dealer meeting.

"They do have the cash to promote in the marketplace as is necessary. It's like having a dad who's got some cash reserved to help his kid get a start," said Merle Wieland, of Wieland Sales, Inc., Bay City, Mich. He noted that financial security has been lacking as IH has struggled for the past five years to avoid bankruptcy.

The major concern of dealers is who will remain in business. A Tenneco executive confirmed that 15 percent, or about 400 IH farm equipment dealers, will be cut to avoid duplication in areas where there is an IH and a Case dealer. Tenneco will help arrange buyouts or relocate dealers to new territories, he said.

Lee E. Jensen, of Stuber Jensen Equipment, Bowman, N.D., hopes he has an advantage over the Case dealer in his area because his dealership is more modern.

Gary Wolverton, of Wolverton International, Twin Falls, Id., faces the same situation. "One will remain and one will not," he acknowledged.

Both will know soon. Tenneco will contact dealers within the next 60 days regarding their individual situations.

Tenneco officials told the IH dealers, as well as the Case dealers meeting in Kansas City, that dealers would sell Case tractors of over 100 HP and IH tractors under 100 HP along with IH farm implements.

That concerns IH dealers who said the larger IH tractor is a big seller for them. Its quality is better and technology is more sophisticated than the comparable Case tractor, they said.

However, the larger IH tractor will no longer be built. Under the acquisition arangement, the Rock Island (Ill.) plant, where the tractors are produced, will be closed at IH's expense though Tenneco will acquire the tooling. The closing will effect 600 active employes and 600 on temporary layoff from the plant.

Case has adequate capacity in the general area and does not need the plant, which can produce nearly 40,000 large tractors per year, more than last year's total tractor demand and 35 percent of the industry's annual capacity.

Also, in accordance with the agreement, Tenneco will acquire IH's combine plant in East Moline, Ill.; an implement facility in Hamilton, Ont.; engineering operations in Hinsdale, Ill.; machine tools from plants in Rock Island and Memphis; North American dealership and related field support, and IH's subsidiary in the UK,including a tractor plant in Doncaster, England.

Tenneco also has agreed to acquire other IH agricultural operations in Germany, France and Denmark, pending completion of studies and satisfactory arrangements with

The beginning

International Harvester observed its centennial with a series of ads in 1931. This ad depicts Cyrus McCormick's invention of the reaper in 1831.The reaper represented a giant leap forward for American agriculture.

A Farmall and a Case and a boy on a farm

And now, 40 years later...

By Robert M. Lienert
Editor

International Harvester Chairman Donald D. Lennox was talking about the sale of his company's farm-equipment business to Tenneco's J.I. Case.

"You can pay only so much for tradition and history," he said.

That's true, of course. From this writer's viewpoint, it is just as well that he did not say anything about nostalgia.

For I can look back 40-plus years and recall with warmth and longing the hundreds of hours I spent on tractors built by both companies, and operating farm equipment built by both companies (including McCormick and Deering grain binders, with each make built before those two firms combined to form McCormick-Deering).

From an economic standpoint, those were tough times. Looking back to the Depression and dust-bowl years from my seat right now at the word processor, they were not bad years at all.

The original McCormick-Deering Farmall tractor, appearing in the 1920s, was called the Farmall Regular and it revolutionized row-crop farming with its narrow front tread and high clearance. In the early 1930s, the Farmall Regular was replaced by the "two-plow" Farmall F-20 and the "three-plow" Farmall F-30.

Those were conservative ratings, for the F-30 acquired by my family in 1934 was a tough, no-nonsense powerhouse with a mighty masculine bark but agile ways despite its brute appearance. It was selected, rather than an F-20, for use on the belt to drive my father's Case threshing machine.

The F-30 toyed with that 28-inch (width of the threshing cylinder) thresher. And it did not work very hard to pull a three-bottom plow or

Audi counts on 4000 as its image builder

By Mary Beth Mayer
Staff Writer

INGOLSTADT, West Germany. – Although it has been in existence for more than 15 years, Audi NSU Auto Union AG is still searching for a distinct personality.

The Audi folks, based here in the heart of the tourist's Germany, yearn for an identity. They are looking to U.S. baby boomers and their appreciation of the '85 4000-S four-door sedan, 4000-S Quattro four-door sedan and Coupe GT to finally establish the marque in the U.S.

The differences between the 4000-S and 4000-S Quattro are underneath – the latter is all-wheel drive and has a more powerful engine. For '85, they have received the same styling alterations and new equipment. The Coupe GT also has been resculptured.

Audi has made these models smoother, more in line with the slippery 5000-S. To showcase the new cars, Audi took a group of automotive journalists to this Bavarian fortress town in September to tour its assembly and testing centers, drive U.S.-specification cars and meet with top executives.

Performance of the cars on the autobahn was impressive enough to put a newcomer to that avenue of acceleration at ease enough to enjoy the panorama of chapels and mountain resorts squeezed against the Alps' awesome crags.

Ferdinand Piech, Audi vice chairman, highlighted the changes for

Too close to call in Europe

Ford and Fiat heading for a photo finish

The latest numbers are in. New-car sales in Europe totaled 7.9 million units in the first nine months of 1984.

But the big event is the race developing for European sales supremacy between Ford Motor Co. and Fiat Auto S.p.A. Ford holds a slim lead with a 13.1 percent market share in the January-September period. Right behind is Fiat at 12.8 percent. With three months to go, only 24,000 units separate the two companies, and it looks like the race will come right down to the wire, just as in 1983 when Renault nosed out Ford with a belated rush of sales in its French home market in December.

Other companies appear too far back to mount a fourth-quarter surge and challenge the leaders: Volkswagen-Audi has 11.8 percent of the market, General Motors and Peugeot 11.2 percent each, and Renault 10.8 percent.

Because European markets are in a down phase, the sales struggle for Ford and Renault, as well as the others, is uphill through the rest of the year. It's expected that just a few hundred sales will separate the top two. A gambler might bet on Ford, whose management still feels the sting of last year's final hour defeat at the hands of Renault. Ford sales have been running strongly all year long – strong enough so far to stay ahead of Fiat which benefited from a buoyant market the first half of this year and an overwhelming order book for its new Uno model.

Ford lost relatively little production due to the West German metalworkers strike last spring which severely hurt GM Adam Opel and VW-Audi. As a result, when the United Kingdom's traditional autumn sales boom came, Ford was ready to capitalize on it.

Ford's position in the U.K. is its key card in Europe, although it is also strong in West Germany, France and Spain. Like other exporters to Italy, Ford doesn't do well there since Fiat holds a dominating 55 percent market share.

While Fiat has improved its position across Europe this year, it started from a very low base. Morever, its strength outside of Italy has been waning since midyear. In the first half of 1984 its registrations in Europe were 4.7 higher than a year earlier. But June itself saw a decline for Fiat of 0.7 percent, followed by drops of 3.9 percent in July, 4 percent in August and 5.4 percent in September from the same months in 1983. At the end of nine months, Fiat showed only a 2.2 percent overall gain and was riding a downward curve.

Those are danger signs for Fiat in its quest for European sales leadership. However, the Italian firm defines the European market differently than other companies; it omits Spain, where imports are limited, and without Spain in the European total, Fiat is leading the pack by its own reckoning.

Aside from Italy, the only countries showing sales increases in the nine-month period this year over last are small ones: Belgium, up 5.8 percent; Denmark, 19.5 percent; Finland, 6 percent; Greece, 5.9 percent; Sweden, 9.7 percent. Altogether they added about 83,000 sales compared to last year.

Declines elsewhere resulted in a combined drop of more than 241,000 sales for the nine-month period, or 3 percent fewer overall than a year previous. The biggest drop was in France (12.5 percent and 183,-000 units). West Germany fell 2.7 percent and 52,500 units, Austria 13.8 percent and 27,700 units, the U.K. 1.6 percent and 24,-100 units.

The French disaster is a big reason for Renault's steep fall this year. Another is an aging line of mainstream products; that is expected to be corrected by the new R5, although early reports suggest it is slow taking off.

Peugeot's stuttering recovery also is distorted by French problems. The company needs a healthy pickup in domestic-market demand if its recovery is to gain momentum.

Ford's ability to stay ahead of the pack will depend on the success of its strategies in the big U.K., West German, French and Spanish markets. In the U.K. Ford is feeling pressure from Austin Rover (which was the sales leader in October) and GM Vauxhall, which has a new model, the Astra, in the main market segment. In Germany, the Opel Kadett (same car as the Astra) and VW Golf look fresh and modern compared to the Ford Escort.

So the race will be close. And whoever comes in first will lead a Western European market that probably will fall short of 10 million new car sales in 1984, down from 10.5 million last year.

– Richard Feast

The above are percent-of-market shares for Europe's six leading new-car sellers in the penod January-September 1984, plus combined shares of all Japanese makes. Renault shares for Finland and Norway are not available, but are too small to affect overall standings.

world news briefs

Romania's Dacia Duster debuts.

Dacia drives in

Another Eastern European product is going to market in the West. The Dacia Duster line of light four-wheel-drive vehicles, built by Auto Dacia of Romania, had its debut at the Birmingham, England, auto show last month. The competitively priced vehicles sell from $4,300 to $7,500. Dacia has made cars under Renault license for 20 years.

Malaysian automobile

The first cars ever made in Malaysia will roll from an assembly line next July. Called the Proton Saga, the product is the result of a venture between Japan's Mitsubishi Motor Corp. and Malaysia's Heavy Industries Corp. Calling for output of 120,-000 cars annually by 1990, the project is aimed at expanding Malaysia's manufacturing base.

Beep, beep! It's a Roadrunner, hitting the trail in the U.K.

Roadrunner ready

BL's Leyland Vehicles has put the name Roadrunner (see photo) on its new line of trucks in the 6 to 10-tonne range. It completes Leyland's extensive model renewal project and gives the firm a product line from 6 to 300 tonnes. Roadrunner is important in the U.K. where the bulk of Leyland's business is; its weight segment now accounts for a third of all truck sales there compared to only 5 percent a decade ago.

Edwardes at Dunlop

Sir Michael Edwardes, former chairman of British auto company BL Ltd., has a new job as chairman of British industrial group Dunlop. He was appointed by a consortium of banks that is trying to rescue troubled Dunlop, which has already yielded most of its European tire operations to Japan's Sumitomo.

Fiat in for Renault

Yugoslavian newspaper reports suggest that IMV, a local auto maker, may switch production agreements from Renault to Fiat. IMV currently produces the basic Renault R4 model.

Birmingham expands

Nearly 700,000 people flocked to the 12-day auto show in Birmingham, England, in October. Attendance was up 8 percent over the last show in 1982.

BCA a biggie

British Car Auction's U.S. sales topped $1 billion in 1983 and are headed for a 50 percent increase this year, shareholders are told. BCA recently reported a part-year profit of $11.66 million on sales of $58.6 million.

World News

Continued from Page 33

Saab spending

Saab Car Division, Sweden, is spending $41 million to raise annual production 25 percent to 150,000 units. The money is being spent over three years. As a group, Saab-Scania AB sales rose 27 percent in the first eight months of 1984 compared to a year earlier, reaching $1.86 billion.

More Ford diesels

Ford Motor Co. may need more small-diesel engines in Europe than its current annual allotment of 150,000, says Roger Humm, Ford Motor Co. Ltd.(Great Britain) sales director. The company is investigating possible production expansion at its Dagenham, England, factory.

TVR turnover doubles

Sales by TVR Engineering Ltd., U.K. sports car builder, will top $8.5 million in 1984, double last year. Production is running at capacity of 600 units annually. The company is considering a second assembly plant, possibly in France.

Renault turns to Japan

French auto maker Renault is discussing joint ventures with three Japanese companies closely associated with Toyota Motor Co.: electrical equipment producer Nippon Denso, transmission maker Aisin, and Toyota Machinery, manufacturer of numerically controlled machinery. Renault recently inked an agreement with Japanese company Stanley to jointly produce LCD instruments in France.

Suzuki stopped

A plan conceived to sidestep import limits on Japanese cars in the U.K. was blocked by Japan's Ministry of Trade and Industry. The scheme was concocted by Suzuki's importer in the U.K., who took customers to Belgium, where there are no quotas, for vehicle delivery.

Skidding

Continued from Page 31

about it when introducing the 760 series almost three years ago. Only now have they become confident enough to produce it.

On the car, a sensor consisting of a toothed disk and an induction coil is fitted to the wheels. Each tooth of the disk induces a surge of current in the coil, which builds up an alternating current directly proportional to the speed of the wheel. A control unit monitors each of the four currents and is able to compare the speeds of the front and rear wheels. If the driven (rear) wheels spin on ice or slow when aquaplaning, the control unit detects the difference with the front-wheel speeds. If the difference exceeds a certain limit – this is the key to Volvo's patent, Melin says – the control unit throttles the engine or completely cuts off the fuel supply until both sets of wheels resume rotating at the same speed.

A light on the car's instrument panel warns the driver of any imminent danger of skidding. A switch on the dash enables the driver to turn off the system manually.

Volvo calls the system "above all, a safety feature." A test drive on the slick and loose surfaces of a former airfield near Gothenburg confirms the extra controllability the system provides. The difference between when the ETC is engaged and when it is not is remarkable.

– *Richard Feast*

Enasa wants partners

Enasa of Spain is discussing joint ventures with other manufacturers of vans and medium-weight truck cabs.

Bad business

Ford Motor Co. estimates Europe's volume car producers will invest $70 billion in the next five years, but will generate only $40 billion in vehicle sales, according to John Hardiman, Ford vice president for European parts and service operations.

Makers build 186,230 autos

Week's car output is year's best

By Louise Kertesz
Detroit Reporter

Last week, domestic makers scheduled their highest production so far this year.

The projected output of 186,230 topped the former 1984 high of 181,909 set during the week ended March 10. It was a 91.44 percent increase over the 97,279 assembled during the previous holiday week.

Last week's production was up 2.06 percent from the year-ago week's 182,465.

So far this year, 7,228,848 cars have been built, 15.82 percent more than the 6,293,071 assembled last year at this point.

Companies accounted for last week's estimated production as follows: General Motors, 57.69 percent; Ford Motor Co., 22.07 percent; Chrysler Corp., 15.12 percent; American Motors, 2.58 percent; American Honda, 1.68 percent, and Volkswagen of America, 0.86 percent.

Chrysler scheduled two nine-hour daily shifts last week at its plants in Belvidere, Ill.; St. Louis (Nos. 1 and 2) and Sterling Heights, Mich. In addition, St. Louis and Sterling Heights operated Saturday (Dec. 1).

General Motors plants working two overtime shifts Saturday were: Lansing (Oldsmobile No. 1); Flint (Buick B and G Lines); Detroit; Doraville, Ga.; Framingham, Mass.; Linden, N.J.; Norwood, O.; Oklahoma City, and Willow Run, Mich.

GM plants in Lansing (Oldsmobile No. 2); Lake Orion, Mich., and Wentzville, Mo. were scheduled to work one overtime shift Saturday.

Also working Saturday were Ford's plants in Kansas City, St. Louis and Wixom, Mich.

SAE show is shaping up with global proportions

Roger Rowand
Engineering Editor

DETROIT. – In the past few years,the auto industry has undergone reorganization, trimming of costs, restructuring of organizations and tremendous investments.

And all that has not ended, if the way the 1985 SAE show is shaping up is any indication, said J. Mason Reynolds, general chairman of the SAE International Congress & Exposition set for Cobo Hall Feb.25-28.

"The fact that an increasing amount of interest has been shown in the annual event over the past couple of years is an indication people don't think all that has ended. The industry still is in a period of dramatic change," he said.

Reynolds is executive vice president of Allied Corp. and president of Allied Automotive.

He said the '85 show will cover about 16 percent more floor space than the'84 show covered. Cobo's Hall D on a lower level, rarely used, will be occupied during SAE week.The professional association said space is still being sold, but on an if-available basis.

The SAE show includes an extensive schedule of technical sessions and displays of production techniques, new products and new materials applications. Its theme for '85 is Global Engineering Challenge.

"That theme is very appropriate because no one knows more than we do as suppliers how global this industry is. It is vital to take a global position and use global resources to be successful," he said.

As an example, Reynolds cited Allied's becoming a supplier to Ford in Brazil for that maker's new truck with the unlikely code name Cargo Ram.

"To get that new business, it took six different operations in five countries working together to put together proposals on products offered, cost analyses and prices," he said." At one time, all that was localized but we no longer are able to do that.

"We have to compete on a global basis on price. Of course, there still are regional preferences and standards, but they're breaking down," he said.

Roger B. Smith, chairman of General Motors, will be the speaker at the annual banquet held in connection with the event. That is a sold-out affair with some 4,800 expected.

Reynolds said another reason for the success of the upcoming exposition is increased participation by joint-venture groups from abroad. There will be joint-venture displays from Brazil, England, Japan, Italy and West Germany.

In the technical sessions, particular emphasis is being placed on engine technology. Several sessions will cover new engine design, combustion and emissions, electronic control of diesel and spark ignition engines and power boosting.

Also a major topic is the subject of management skills as related to manufacturing and quality control, SAE said.

Truck production highest of year 72,514 built

Targeting assembly of 72,514 units last week, U.S. truck makers expected their best week so far this year.

Last week's projection topped the previous high for the year of 70,166 reached during the week ended Nov.10 and was 94.52 percent more than the 37,279 trucks built during the previous week, which included the Thanksgiving holiday.

The total for last week was 45.21 percent better than the year-ago week's 49,937.

Year-to-date, 2,902,117 trucks have been assembled, 31.41 percent more than the 2,208,439 completed last year at this time.

Chrysler Corp. scheduled two nine-hour daily shifts last week at its plant in Warren, Mich. That plant was slated to work two overtime shifts Saturday (Dec. 1).

General Motors plants working two overtime shifts Saturday were: Flint Nos. 1 and 2, Janesville (Wis.), Lordstown (O.), St. Louis and Pontiac No. 5.

Also working Saturday were Ford Motor Co.'s plants in Wayne Mich.(Michigan Truck) and Norfolk.

Week's output steady in Canada at 20,370 cars

Canadian makers slated production of 20,370 cars last week, up a bit (1.04 percent) from the previous week's 20,160, but 13.50 percent less than the year-ago week's 23,550.

So far this year, 969,622 cars have been built, 7.88 percent more than the 898,795 assembled last year at this point.

Estimated truck production of 17,796 units last week was 3.57 percent better than the previous week's 17,182 and 14.50 percent more than the year-ago week's 15,542.

International Harvester Co., on strike at presstime, reported no production for the past two weeks.

Chrysler Corp.'s Windsor (Ont.) facility targeted assembly of 2,268 Plymouth Voyagers, 2,292 Dodge Caravans and 672 Mini Ram Vans last week, bringing year-to-date output of T-115s to 217,402.

Profits climb for Chrysler's financial unit

DETROIT. – Chrysler Financial Corp. reported earnings were up nearly 80 percent, setting a third-quarter record.

Net income was $20.3 million, up 79.6 percent from last year's $11.3 million.

For the first nine months of 1984, earnings were $60.4 million, up 70.6 percent from last year.

Of the $60.4 million, $54.3 million was earned from financing operations, while $6.1 million came from the insurance business. Last year, of the $35.4 million earned in the first nine months, $30.1 million was made in the financing end of the business and $5.3 million in insurance.

Chrysler Financial financed 1.2 million new and used vehicles in the first nine months of the year, compared with 903,096 last year.

Auto groups ask U.S. aid against foreign inroads

By Richard Johnsen
Detroit Reporter

The U.S. Government should take steps to gird the domestic automobile industry against foreign competition, according to spokesmen for U.S. auto workers, parts suppliers and service industry companies who appeared at an International Trade Commission hearing in Detroit last week.

However, the president of the American International Automobile Dealers Assn. spoke out against protectionism. He told the quasi-judicial panel that economies of scale and efficiency of production have made Japanese manufacturers tough competitors, "not any government-controlled tilted playing field."

The hearing was called to discuss the "Internationalization of the Automobile Industry and Its Effect on the U.S. Automobile Industry." The independent fact-finding trade agency of the U.S. Government initiated the study last summer and is scheduled to complete its inquiry and present the results to President Reagan and Congress in April, 1985.

UAW President Owen Bieber told the commission that Japanese imports should be restrained at 17 percent of the market on a multi-year basis, and he repeated the union's call for domestic-content legislation.

Without policy redirection, Bieber said, domestic auto makers may have capacity to build only 900,000 subcompacts in the U.S. by 1990, when subcompact sales should reach 4.2 million.

"The manufacturing trade deficit will exceed $90 billion this year, a swing of $100 billion from 1980's surplus of $12 billion," said the UAW president. "Unfortunately, the Administration has no policy to bring our trade back into better balance."

Bieber said the trade deficit will balloon even more rapidly if Japan lifts its auto export restraints next year. The four-year-old voluntary restraint agreement (VRA) currently limits Japanese auto makers to exports of 1.85 million cars annually to the U.S.

"We believe that U.S. negotiators must make clear to Japan that it must extend restraints on a multi-year basis at a maximum 17 percent market share," said Bieber.

He also called for local-content laws to "assure continued small-car production here by the U.S. companies and adequate investment here by the major foreign companies."

"Free trade is wonderful in theory, but it does not begin to fit the realities of the auto industry," said Bieber. He noted that – besides Japan – Mexico, Brazil and Korea are aggressively pursuing auto exports while curbing imports.

"With all other major markets relatively closed, the U.S. auto maker now offers them a surge

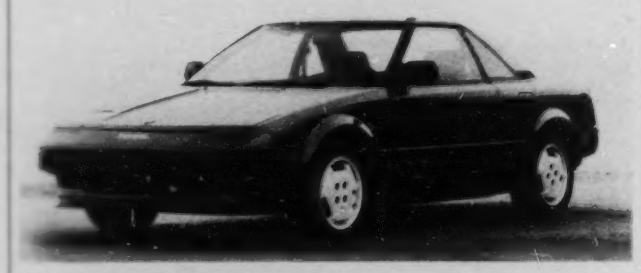
2-seat Toyota



'Mister Two' set for launch

Toyota's entry into the growing two-seat market is this wedge-shaped, mid-engine MR2 sports car. Launched in mid-December, it's the first Japanese counter to Pontiac's hot-selling Fiero.

MR2 to compete in trendy market led by Fiero

Toyota two-seater bows this month

By Dan McCosh
Detroit Reporter

TOKYO. – Toyota Motor Co., Ltd.'s, launch this month of the MR2, a long-awaited competitor for Pontiac's hot-selling Fiero, seems to portend yet another story of Japanese sales success, unusual only because Toyota is a year behind its U.S. competitor in exploiting a trendy market.

A strictly two-passenger, midengine sports car powered by a high-output, 16-valve engine, the MR2 is predictably drawing raves from the enthusiast auto press. It's an archetypical car for the so-called "yuppie" market – that elusive, mid-30s generation that today seems be controlling auto makers' marketing strategy.

Yet, with the launch of the MR2, Toyota will be testing the strength of an historically thin market for limited-use, two-seat sports cars that already is testing the nerves of sales prognosticators in Detroit.

Major contenders in the low-priced two-seat category today are the aforementioned Fiero, the Mazda RX-7, Nissan Pulsar NS, Ford EXP and Honda CRX. These cars are expected to hit combined sales of about a quarter-million units this year, nearly double last year, mainly due to the success of the Fiero.

The rapid growth of the segment has been attracting new entries: Aside from the MR2, introduced in mid-December, Nissan is expected to introduce a new small two-seater in 1986, filling in a gap left as its "Z" model balloons in heft, power and price. Ford recently announced it will restyle and extend the life of the EXP, originally due to expire this model year.

But Toyota historically has been reluctant to pursue the two-seat market.

Toyota's conservatism, notorious even in the Japanese auto industry, is understandable. Much of Toyota's export strength has been based on exporting cars that have found a relatively strong

breaking news

EPA explores CAFE calculations

WASHINGTON. – EPA is adding two more items to the list of those it believes may have reduced measured fuel economy in the agency's CAFE calculations. Acting on a request by General Motors and others, it said in a proposal that it would like estimates from the auto makers on the negative impact of the increase in carbon content of its fuel test and whether a proposed industrywide credit of 0.4 MPG, in 1981 only, for the use of fuel-efficient oils, is correct.

Beickler back at Adam Opel

RUSSELSHEIM, West Germany. – Ferdinand P. Beickler is now back at the chairman's desk at Adam Opel following a heart attack in September. Beickler, 62, is a General Motors vice president.

Tax plan has minuses for auto makers

By Jake Kelderman
Washington Reporter

WASHINGTON. – U.S. auto makers that have made extensive use of accelerated depreciation and the investment tax credit, since these were instituted in the tax bill of 1981, would lose the latter and see a marked slowdown in the use of the former, as shown by details of the Treasury Department's proposed tax simplification plan released last week.

The companies are currently writing off new equipment, from robots to plants, in three to 15 years under the Accelerated Cost Recovery System (ACRS) of the 1981 tax act.

ACRS, by allowing business to write off large amounts of an investment in the early years, boosts cash flow while at the same time deferring tax liabilities.

Under the depreciation plan proposed by the Treasury – otherwise known as Real Cost Recovery System (RCRS) – this writeoff time period would now be lengthened to five to 63 years and the amount of depreciation that could be taken in the early years would be drastically limited.

In short, the tax breaks that to some extent fueled the recent recovery of the auto industry would be taken away.

While taking these tax benefits away, however, the Treasury proposal would for the first time allow the auto makers' assets to be indexed for inflation's effect, a plan the Treasury says will provide more generous depreciation for many properties than does the current system.

Treasury would also lower the corporate tax rate from 46 percent to 33 percent and provide other tax breaks.

Acknowledging that corporate America would pay more, Treasury says the tax plan would be revenue-neutral.

But tax experts assert that, within this planned redistribution of the tax burden, the capital-intensive industries like auto

Will present demands to Executive Board today

Canadian branch may quit international UAW

By Marjorie Sarge
Labor Editor

After three years of playing in a separate league, the Canadian UAW will pull out of the international union unless it is allowed to run its own affairs.

UAW Vice President Robert White, director of the Canadian region, will attend the UAW's 25-member International Executive Board meeting which begins today (Dec. 10) and will present four demands. If they are not met, White said the 120,000-member Canadian UAW will end its 48-year marriage to the international union.

"There is almost zero chance the Canadians will stay in the international union," said one UAW board member. "Bob's ultimatum was meant not to be accepted."

"I would hope we can come to an understanding and keep the international union together," White said. "But there can't be a whole lot of muddy water here. The board must come to a decision to agree with the general thrust of the proposals."

If not, there will most certainly be a split.

If the final decision is to split up the international, White said the relationship could be terminated at any point. There is no need to wait for a Constitutional Convention, although it is possible the union would call a special convention in light of the situation.

"It would not be a sudden-death kind of deal," said one source. "No one knows the procedure."

• White will ask the board for the following things:

1. Allow the Canadians to pursue their own bargaining goals "without interference from the U.S."

2. "No interference or intervention will be permitted by any officer or international representative" unless requested by the Canadian director.

3. The Canadian staff will "report to and work completely under the direction" of the Canadian director.

4. The Canadians "will have the right to pursue mergers with other unions, including Canadian sections of international unions, whether or not parallel mergers are achievable in the U.S."

"The question is are we going to be equal partners in the

A history of luxury and pride

Rolls-Royce observes its 80th anniversary

LYNDHURST, N.J. – Fourteen of the top Rolls-Royce dealers in the U.S. left for London last week for the official celebration of the 80th anniversary of the first car built by Henry Royce.

The "birthday celebration" at the 400-year-old Guildhall was attended by 500 persons, including the Lord Mayor of London. The Band of the Royal Marines played for the occasion.

Frederick Henry Royce had struggled from poverty to become an engineer and manufacturer of electric cranes in Manchester, England, at the time he bought a French Decauville. But it was unreliable, so he began devising a light car of his own.

His first prototype was powered by a two-cylinder, 10-HP, 1.8-liter engine, built in his workshop on Cook Street in Manchester. Its first run was made on April 1, 1904. It was an engineering success: Royce would demonstrate its smoothness by balancing a penny on the edge of the radiator while the motor was running. Three-, four-, six- and eight-cylinder models followed.

The Hon. Charles Stewart Rolls, son of wealthy aristocrats, was racing cars and becoming wealthy as distributor for the French car, Panhard, in London when the two men met in 1904. Rolls was impressed by Royce's two-cylinder car, and agreed to sell the vehicles.

In March, 1906, the two men established Rolls-Royce, Ltd., which produced a 30-HP six-cylinder chassis capable of carrying a coach that would seat seven – important in an era when servants accompanied wealthy travelers.

A modified version of this Light Twenty model was driven by Rolls when he won the 1906 Tourist Trophy and broke the Monte Carlo-to-London time record. But the heavy coach needed more power, so Royce set to work on an all-new, 40- to 50-HP six-cylinder model that was later to find fame as the Silver Ghost.

Rolls-Royce first came to America in 1906, and Rolls drove his car to first place in a five-mile race at the Empire City Track in Yonkers, N.Y.

A Texan bought the first Rolls-Royce in the U.S., but only a few cars were sold here each year until 1913, when the company set up a parts and service department.

The Silver Ghost – so called because its metal parts were plated in silver, the body silver-colored (aluminum) and its mechanicals as quiet as a ghost – was first shown in 1907.

Claude Johnson, who had been partner in Rolls' Panhard distributorship and was then Rolls-Royce's managing director, drove the Silver Spirit in a 15,000-mile trial. It was completed with only scheduled stops and with only five dollars worth of parts in need of replacement after the run.

It was Johnson who gave the Silver Ghost its name.The car remains in running condition, and it completed a British rally earlier this year.

Rolls died in 1910, at the age of 33, the first Briton killed in an airplane crash. He was never to see the Flying Lady hood ornament designed the following year that has since come to symbolize the company. Upon his death, the red intertwined Rs on the grille were changed to black, reportedly as a sign of mourning. Royce lived until 1933.

The 40-50 models, now known as Silver Ghosts, continued in production through 1925.

Rolls-Royce produced half the British airplane engines during World War I, but its autos proved nearly as valuable: Lawrence of Arabia waged war in a fleet of nine armored Rolls-Royces and wrote that, "in the desert, a Rolls was prized above rubies."

After the war, a factory was set up in Springfield, Mass. It built 2,944 cars during its years of operation: 1919 to 1931.

It was also between wars that Rolls-Royce introduced an uncharacteristically light model with a 20-HP engine. In addition, the successor to the Silver Ghost, the first of the Phantom models, bowed in 1925.By the time of the Second World War, a V-12 powered the Phantom III series.

In 1931, the company acquired Bentley, a firm known for its performance cars, but one that was consistently undercapitalized. W.O. Bentley's first car debuted in 1919. The first Bentley by Rolls-Royce bowed in 1933, and the marque remained distinct from Rolls-Royce until the 1950s.

When World War II broke out, Rolls-Royce halted auto production to concentrate on its Merlin engine, which powered the Spitfire, Hurricane and Lancaster planes for the Royal Air Force and the Mustang fighter for the U.S. Airplane engines are still being made with the Rolls-Royce name, but under a separate company, spun off with government aid in 1971 after the unit ran into financial difficulties.

When auto production resumed after the war, it was at a new plant in Crewe, and Rolls-Royce was building bodies along with chassis; no longer would a customer have a coachbuilder custom-make a body. Despite the austerity of the times, management held closely to its pre-war standards, building the world's most luxurious cars.

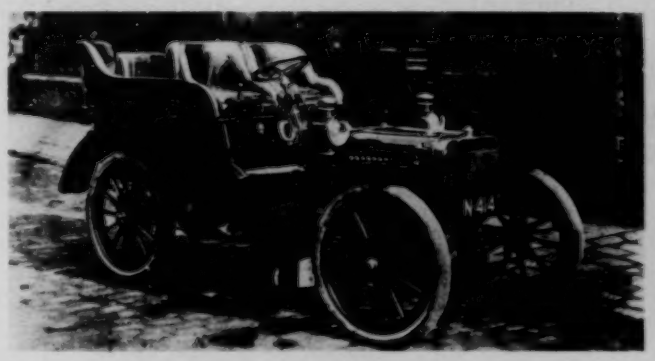
Rolls-Royce became a publicly traded company in 1973, and in 1980, it merged with the English engineering company, Vickers, Ltd.

Today, it continues its tradition: Eight full hides are used in every interior, and the animals from which the hides are taken are fenced away from barbed wire. Engines and bodies are crafted by hand: A sedan takes three to four months to build, a Corniche convertible, five months. Interior veneer is taken from a single walnut tree. And the handmade stainless-steel grilles are polished for five hours to give them a silvery shine.

The company estimates more than half the 85,000 Rolls-Royces ever built are still on the road.

Her Majesty's choice

Queen Elizabeth was the first reigning monarch to chose a Rolls-Royce as official car of state. That first royal Rolls was a Phantom IV limousine, built for heads of state beginning in 1949. Shown here is the Queen's Phantom VI, a V-8 limousine that debuted in 1968.



Early prototype

One of Royce's first experimental cars, built in 1904, before Rolls-Royce was formed.

Humble beginnings

F. Henry Royce built his first two-cylinder, 10-HP car here, on Cook Street, in Manchester, England, in 1904. Manchester remained the home of Rolls-Royce until 1939.

GM looks for growth in Middle East, Asia

By Marjorie Sorge
Labor Editor

General Motors will spend 65 percent of its 1985 overseas capital investment budget in Europe, where GM is now in fifth place in sales, according to James F. Waters, GM vice president, overseas group.

GM's capital spending overseas will be about $1.2 billion in 1985, about 15 percent of the corporation's total budget, GM Chairman Roger B. Smith said last week.

Waters also told Automotive News he expects GM's overseas business to grow faster than its U.S. business, with most of that growth in the Middle East and Asia-Pacific nations. GM currently sells about 8.3 milliion vehicles worldwide, or about 22 percent of the 37.9 million sold. About 65 percent of GM's 1.9 million overseas sales are in Europe.

Waters also said the worldwide market will increase to 39 million in 1985 and could hit 60 million by the mid-1990s.

GM expects to sell about 250,000 vehicles in South Africa in 1985 but that market is in a tailspin and will stay that way for about six months, and there are no firm plans to bring South American or European-made cars into the U.S., he said.

GM plans to increase its market share overseas substantially, although it does not expect to see much of an increase in South America or Europe in 1985, Waters said. He said the company expects to continue to take between 11 and 12 percent of the European market next year. For the first 10 months of 1984, GM had 11.1 percent of the market.

GM is now in fifth place in Europe after losing about 120,000 cars and about $1 billion in sales during the metalworkers strike in Germany earlier this year. The difference between first and fifth place in Europe is about two percentage points, Waters said. Ford of Europe is in first place with 12.9 percent of the market.

GM also plans to hold on to its Vauxhall subsidiary in England and expects it to sell about 300,000 cars in 1985, Waters said. Vauxhall sold about 250,200 cars in 1983 and lost 1.1 million pounds (about $1.6 million based on the value of the pound at the end of 1983). For the first nine months of 1984, Vauxhall sold about 237,600 units.

There are plans to begin shipping the new front-wheel-drive C-cars to Europe in 1986 if the exchange rates make the models competitive, Waters said. There are, however, no plans to sell the Isuzu, Suzuki or Daewoo cars through GM dealers in Europe, as in the U.S., nor are there any immediate plans to sell the GM/Toyota joint venture car overseas, Waters said.

SANTA ROSA, Calif. – Smothers Volvo has opened here. General manager is Robert M. White.

Fords from Taiwan may come to U.S.

By Dan McCosh
Detroit Reporter

Ford's recent expansion in Taiwan has the potential of producing cars for the U.S. market, L. Lindsey Halstead, Ford vice president, Asia-Pacific and Latin American Automotive Operations, told the Detroit Auto Writers Group.

Ford recently announced an expansion of its 70-percent-owned Lio Ho Motor Co., Ltd., in Taiwan, from a current 39,000 vehicles to about 90,000 vehicles annually, with some 30,000 of them aimed at export.

"We don't know where they will go, no decision has been made," Halstead said. "But there is the potential of some coming to the U.S."

General Motors plans to import cars to the U.S. from Korea, and Chrysler Corp. currently is negotiating a similar program. Ford has made no similar moves, but plans additional imports from Japan.

Asked whether Ford would soon bring 25 percent of its cars from overseas, Halstead said, "If (Japanese) restraints came off, we'd have to scramble in that direction – I don't know about 25 percent."

A Ford bright spot is Australia, where it has passed GM to lead the market. Ford's success in Australia stemmed partly from the introduction of Mazda-developed small cars, a model for future product planning in the U.S., Halstead said.

"I can see that happening in NAAO as well. But I don't see a 'meshing' of the two companies where Ford NAAO won't retain its technological development capacities," he said.

Asia-Pacific and Latin America, which currently are about one-fifth the size of Ford's NAAO, are expected to be the fastest-growing markets through the remainder of the century, Halstead said. He predicted a 3.5 percent annual growth overall, with 60 percent in places like China, Taiwan and Korea.

Domestics up 1.7 pct.; imports rise 6.2 pct.

November sales inch past '83 total

By Jenny L. King
Staff Writer

In spite of two periods marked by sales declines, the November total for the domestic auto makers kept just ahead of the year-ago figure.

Imports were up 6.23 percent for their seventh monthly increase of 1984. Import penetration was 25.17 percent, best since August.

Domestic new-car sales were up 1.72 percent in November, to 600,692 from 590,527 last year. Third-period sales were off 14.17 percent, the first 10 days were down 4.72 percent with the mid-month increase of 28.79 percent making the difference between surpassing or missing the year-ago mark.

Import sales in November totaled 202,016, up 6.23 percent from 190,177 a year earlier. The industry total in November was 802,708, up 2.82 percent from 780,704 in 1983.

Domestic sales for the first 11 months of the calendar year were up 18.52 percent, to 7,390,845 from 6,235,881 last year. The import total for the same period was up 2.54 percent, to 2,243,296 from 2,187,792.

Year-to-date total for the industry topped 1983 by 14.37 percent, climbing to 9,634,141 from 8,423,673.

Chrysler Corp. had the biggest monthly sales gain of the Big Three auto makers. Chrysler domestic new-car sales were up 32.39 percent, to 81,743 from 61,605 a year ago. Ford Motor Co. was up 14.47 percent, to 159,485 from 139,319.

General Motors followed its mid-month 16.62-percent sales gain with a 22.84-percent third-period plunge, ending the month off 8.08 percent. GM sales in November were 328,378 this year, 357,247 in 1983.

American Motors reported November sales of 14,905 passenger cars, down 19.88 percent from 18,604. Volkswagen sales were down 47.77 percent, to 4,151 from 7,948. Included in the current November total were 2,208 new Golf models.

Honda sales in November were up 107.27 percent, to 12,030 from 5,804.

In domestic market penetration, Chrysler enjoyed its biggest share for any month this year in November, its 13.61 percent up more than three percentage points from 10.43 percent a year earlier. Ford expanded to 26.55 percent from 23.59 percent, while GM skidded to 54.67 percent from 60.50 percent.

American Motors slipped to 2.48 percent from 3.15 percent, VW was down to 0.69 percent from 1.35 percent and Honda claimed 2.00 percent, up from 0.98 percent in 1983.

Chrysler and Ford makes all registered plus signs in November, while Pontiac was the only GM make to top its year-ago level. Plymouth was up 40.91 percent, Chrysler was up 28.39 percent and Dodge was up 30.36 percent. Ford sales climbed 11.25 percent, Mercury was up 17.16 percent and Lincoln was up 38.47 percent.

At GM, Buick was down 2.50 percent, Cadillac was down 16.04 percent, Chevrolet dropped 8.70 percent, Oldsmobile slipped 14.38 percent and Pontiac squeezed by its year-ago figure by 0.03 percent. AMC was down 35.07 percent and Renault dropped 16.44 percent.

Import sales included several year-to-year increases and some November records. Peugeot, with a sales increase every month this year, announced that its calendar year-to-date sum of 18,067 surpassed any other full year in its U.S. history.

Jaguar reported a November record as did Mercedes-Benz, Volvo and Saab–the Swedish-built car's 32nd consecutive record month. Alfa Romeo sales doubled to 312 from 166, Audi was up 13.03 percent, Honda (import) was up 16.68 percent and Toyota was up 8.99 percent.

Imports claimed 25.17 percent of the month's market, the largest single segment of the six classes. Intermediates were second at 24.54 percent, followed by compacts at 17.79 percent, subcompacts at 14.08 percent, standards at 9.72 percent and luxury cars at 8.70 percent.

Of the domestics alone, 32.79 percent were intermediates, compacts had 23.77 percent, subcompacts had 18.82 percent, standards held 12.99 percent and the remaining 11.63 percent went to the luxuries.

Domestic sales during the final 10 days of November slipped 14.17 percent, to 186,721 from 217,540 last year. The daily rate this year was 23,340 compared with 27,193 in 1983, each period having eight selling days.

For the period, GM was off 22.84 percent, Ford dropped 7.88 percent and Chrysler climbed 22.26 percent. American Motors was down 29.39 percent, VW dropped 48.31 percent and Honda was up 103.52 percent.

Chrysler's share of the market, 14.54 percent, was its deepest 10-day penetration of the calendar year. Ford earned 25.13 percent, GM had 53.45 percent, AMC had 3.22 percent, VW had 1.18 percent and Honda had 2.48 percent.

The daily selling rate for the month averaged 24,028, up 1.72 percent from 23,621 the preceding year. There were 25 selling days both years.

Tagged trout gets her a Dodge pickup

Darlene Carlin receives the paperwork for a year's free use of a Dodge four-wheel-drive pickup from Ray Dreyfus, Dodge marketing manager for Chrysler California. She won the truck for hooking a specially tagged trout during the Dodge-sponsored Ram Tough Fishing Challenge at Lake Irvine in Southern California. Husband John is to her left, and at right is Mike Shepard, general manager of Dodge Central in Anaheim, Calif., the delivering dealership.

Makers schedule 185,649 cars

Another peak week for auto output

By Louise Kertesz
Detroit Reporter

For the second straight week, domestic auto makers scheduled higher production than in any other week this year.

Last week's targeted output of 185,649 cars was up 1.43 percent from the previous week's record high for the year of 183,027.

That total actually fell about 3,000 units short of the projection but still topped the record that had been set in the week ended March 10.

Last week's production was 7.43 percent better than the year-ago week's 172,807.

Year-to-date, 7,471,294 cars have been assembled, 15.52 percent more than the 6,467,601 completed last year at this point.

November production of 676,504 cars, down 4.33 percent from October's 707,130, dipped just 1.13 percent from last November's 684,263.

Last week's scheduled production was shared as follows: General Motors, 58.66 percent; Ford Motor Co., 21.65 percent; Chrysler Corp., 14.27 percent; American Motors, 2.59 percent; American Honda, 1.70 percent, and Volkswagen of America, 1.13 percent.

GM plants working two overtime shifts Saturday (Dec.8) were: Lansing (Oldsmobile No.1); Flint (Buick B and G Lines); Detroit; Fairfax, Kans.; Framingham, Mass.; Lakewood, O.; Norwood, O.; Oklahoma City, and Wilmington, Del.

GM plants in Orion Township, Mich., and Wentzville, Mo., were scheduled to work one overtime shift Saturday.

Chrysler's plant in St. Louis (No. 2) was also scheduled to work two overtime shifts Saturday.

Chrysler's plant in Sterling Heights, Mich., was scheduled to work one overtime shift Saturday.

The Sterling Heights facility will work a daily nine-hour shift this week (Dec. 10).

Chrysler's Jefferson assembly plant (Detroit) will work a half hour overtime daily this week and its Newark (Del.) plant will work two nine-hour daily shifts.

Truck production at 6-year peak for November

November truck production of 272,714 units, though down 6.53 percent from October's 291,754, was the best November output since 1978, when 339,721 trucks were completed.

Last week's scheduled production of 68,866 trucks was down a bit (1.49 percent) from the previous week's 69,903.

That total fell some 2,600 units short of the weekly high for the year that had been projected.

Last week's output was 16.06 percent higher than the year-ago week's 59,337.

So far this year, 2,968,372 trucks have been built, an increase of 31.34 percent over last year's total at this time of 2,260,087.

General Motors scheduled two overtime shifts Saturday (Dec. 8) at its plants in Pontiac (Nos. 5 and 6) and Lordstown, O.

One overtime shift was scheduled at GM's Detroit facility.

Chrysler Corp.'s Warren, Mich.,plant was also scheduled to work two overtime shifts Saturday.

The Warren plant will work two nine-hour daily shifts this week (Dec. 10).

November output of Canadian cars highest since '78

Canadian car production of 94,519 units in November was the highest since June's 102,098 and the best for November since 1978 when 103,872 cars were built.

Canadian truck makers recorded their best November ever. The 75,162-unit output was the highest since June's 75,292.

Last week's car production of 20,370 units was up slightly (0.58 percent) from the previous week's 20,252 but was 9.72 percent below the year-ago week's 22,564.

Year-to-date, 989,874 cars have been assembled, 7.21 percent more than the 923,291 completed last year at this time.

Scheduled truck production of 18,679 units last week was 4.03 percent better than the previous week's 17,955 and an increase of 23.03 percent over the year-ago week's 15,182.

Workers returned to their jobs at International Harvester Co. last Wednesday following a strike, and the company scheduled production of 215 trucks.

At Chrysler Corp.'s Windsor (Ont.) plant, 2,526 Plymouth Voyagers, 2,802 Dodge Caravans and 588 Mini Ram Vans were scheduled for production last week. The total of T-115s assembled so far this year is 223,976.

Renault executive shuffle shows woes have worsened

PARIS. – Bernard Hanon, president and director general of the state-owned Renault Group, accepted Pierre Tiberghien's resignation from his job as head of the car division, a position he held for just two years.

Tiberghien, 56, a former head of engineering, is more a top engineer than financial or marketing man. He will stay with Renault to head a new technical department.

Pierre Semerena, 57, will succeed Tiberghien as head of the car division Dec. 17. He was previously in charge of the RVI truck division. Philippe Gras will be appointed at RVI.

It is understood that with this move Hanon started a major reorganization among top management at Renault.

Earlier this year, the company saw some unexpected personnel changes, notably the departure of Philippe Lamirault, head of sales and marketing for 13 years and also in charge of international affairs for the past two years. More personnel changes are expected following Semerena's appointment.

The shuffle gives indications that the problems at Renault have worsened recently.

Sales and market shares in France and Europe have declined substantially this year and the very important new Renault 5 supermini, launched at the Paris Motor Show two months ago, made a rather disappointing start in France.

Semerena, the new head of the car division, is believed to have obtained full power from Hanon when accepting that post.

This appointment also confirms Semerena as a possible successor to Hanon as the group's president when the time comes. Semerena has gained a reputation for being a complete manager.

1,000 more EDS aides may move to Detroit

DETROIT. – Electronic Data Systems may transfer another 1,000 workers from its Dallas headquarters to Detroit.

EDS, which was recently acquired by General Motors, has already transferred about 1,600 employes to this area. EDS also has leased office space in several Detroit suburbs, including Warren, site of the GM Technical Center.

New M-B series

With seven engines

Developed as the W124, the new Mercedes-Benz series fits into the maker's family between the compact models and the S-class. There are seven engines, including three diesels. Of the gasoline models, the four-cylinder 200 (107 HP) and 230-E (134 HP) have been used in the 190. The two six-cylinder units – 260-E with 167 HP and 300-E with 187 HP – are new. Story, other picture on Page 6.

Domestic car inventory is 58 days, 9-month high

By Kathleen Hamilton
Assistant Managing Editor

The inventory of new domestic cars at dealerships and factories rose to a 58-day level on Dec. 1, the highest days' supply since March, when there was a 59-day supply.

It was 51 days on Nov. 1 and 55 days on Dec. 1, 1983.

The Dec. 1 inventory stood at 1,405,417 units, the highest total since July 1, when there were 1,445,799 cars in stock. The Dec. 1 total exceeded both the month-earlier stockpile of 1,296,182 units and the year-earlier total of 1,307,756.

One big reason for the heavier supply was the production gain at General Motors following its Canadian labor settlement. Another big contributor was the slower selling rate of standard-size cars. Sales of intermediates and luxury cars were down, too, but most of the models in those size classes were better off on Dec. 1 than on Nov. 1, when many were in short supply.

Of the standard-size cars, only the General Motors models were within the normal range. The rest were heavy. But the sales rates for most of the other makers' standard-size cars were constant during the month, indicating that the stockpiling was purposeful. The only car in the class that saw a significant sales decline during the month was the Ford Crown Victoria.

• The supply of subcompacts rose because of increases in production, not decreases in sales: Sales in the segment were nearly the same in November as they had been in October. Heaviest supplies in this segment were at Chrysler Corp. and American Motors. Although AMC increased its sales significantly during the month, its production grew, too.

In the intermediate range, sales fell, causing both the stockpile and the days-supply level to grow to an ideal 50-day supply. There were a few shortages at GM in this segment as December opened, but every other make except Citation (100 days) was in the normal range.

The selling rate declined among luxury models, as well, but in this segment it was due mostly to shortages of GM models. They are still thin, but not as bad as on Nov. 1. Dec. 1 found Continental and Mark VII the only luxury models with bloated supplies.

The inventory shares by segment were: Subcompact, 21.85 percent; compact, 24.02 percent; intermediate, 28.04 percent; standard, 16.09 percent, and luxury, 9.20 percent.

One month earlier, the shares were: Subcompact, 22.69 percent; compact, 25.12 percent; intermediate, 27.52 percent; standard, 15.75 percent, and luxury, 8.92 percent.

As noted, AMC trimmed its days' supply by increasing sales. The only other maker – or division, for that matter – to trim its days-supply figure during the month was Honda.

It halved its inventory of U.S.-built cars, partially because of a production decrease. Its sales rate fell as shortages afflicted dealers. The outcome was a Dec. 1 inventory of Ohio Accords worth four days, compared with a seven-day supply one month earlier. Honda's combined domestic-import inventory on Dec. 1 was the equivalent of a nine-day supply.

Table on Page 49

At Chrysler Corp., Plymouth sales stayed steady but production rose, giving it a larger days-supply figure. Chrysler and Dodge sales declined, with the same result. The big month-to-month change for Diplomat (113 days versus 89) was due solely to a production increase; its sales stayed steady.

Ford Motor Co.'s three marketing units all experienced sales declines, causing increases in their days-supply levels. Again, the big change in the Grand Marquis figures (104 days on Dec. 1 versus 74

Canadians quit UAW; will form own union

By Marjorie Serge
Labor Editor

DEARBORN. – The Canadian section of the UAW will break away from the international union and form a separate organization, probably by this summer, according to Robert White, director of the Canadian region.

White said that when the new union is set up, he will begin working to form a North American Metalworkers Federation – an organization with loose ties in which representatives from auto industry unions in Mexico, the U.S. and Canada can meet to discuss the "real North American auto industry."

"If we don't have very close dialog with workers in other countries, the corporations will play the countries off against one another, especially in low-wage areas," he said.

White said the new federation could be formed in a "couple of years."

The Canadians began taking formal steps to pull out of the international union last week after the UAW's 25-member International Executive Board refused to approve White's proposals for Canadian autonomy. The vote was 24 to 1. White's was the only vote in favor of the proposals.

Those proposals included Canadian autonomy in bargaining and merger possibilities, no interference from the international officers unless requested and that the Canadian staff report directly to the Canadian director.

According to some sources, some board members did not fully understand the impact of rejecting those proposals – the with-

Shop business shows major gain for month

By Francis J.Gawronski
Service Editor

Service and parts business at new-car dealerships rebounded in October after recording its first decline in 18 months in September.

According to the Automotive News Service Index, shop business at dealerships in October amounted to 118.5 percent of the volume recorded in the same month in 1983. It was the second best increase of 1984.

Business in September dipped to 98.3 percent of the business reported for the year-earlier month.

SERVICE INDEX
126.2★

	Oct., '84 vs. Oct., '83	10 mos., '84 vs. 10 mos., '83
Gross Profit on All Labor and P&A Sales	+19.6%	+16.4%
Repair Orders Written	+16.4%	+ 7.2%
Total Labor Sales (Customer & Warranty)	+20.9%	+16.2%
Shop Parts Sales (Customer & Warranty)	+22.6%	+21.1%
Sales of All Parts and P&A	+17.4%	+16.2%

★ – Survey by Automotive News shows that dealer's serevice and parts business in October, 1984, was 118.5 percent of business in October, 1983. Service business in the 10 months of 1984 was 115.1 percent of business in the corresponding period in 1983.

All five indicators used in the Service Index were up impressively in October, led by shop parts sales – those used on both customer-paid and warranty work – which climbed 22.6 percent over their year-ago volume.

The next best showing was that of total labor sales (customer-paid and warranty work), up 20.9 percent, followed by gross profit on all labor, parts and accessory sales – the most important indicator from the dealer's viewpoint – up 19.6 percent.

Sales of all parts and accessories were up 17.4 percent in October, while repair orders written increased 16.4 percent for the month.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

For the first 10 months of the year, service and parts business was 115.1 percent of the volume for the same period in 1983.

Shop parts sales showed an increase of 21.1 percent for the January-October period, while gross profit increased 16.4 percent, and repair orders jumped 7.2 percent.

Labor sales and sales of all parts and accessories recorded the same increase – 16.2 percent – over the year-ago period.

A look at 1986

A peek at the Plymouth P-car

The '86 1/2 Plymouth P-car (an upsized version of the current Omni/Horizon series – due to be dropped in mid-year) reflects considerable K-car influence, particularly in the rear section.

breaking news

Chrysler to buy Mitsubishi V-6s

DETROIT. – Mitsubishi Motors Corp. will supply up to 400,000 V-6s annually to Chrysler Corp., initially for use in its minivans, the companies announced. The five-year contract begins in the 1987 model year. MMC currently supplies Chrysler with 2.6-liter four-cylinder engines; they will be phased out in favor of the sixes.

GM may close Colombian unit

DETROIT.-General Motors said it will close its Colombian subsidiary, which is nearly bankrupt, if the government refuses to allow price increases. David Herman, president of Colmotores, said the company has lost $29.4 million so far this year and will be close to bankruptcy, as defined by Colombian law, by early 1985. It "will be legally forced to receive additional capital from its stockholders or vote for the liquidation

EPA will reduce emissions tests on cars, light trucks

By Jake Kelderman
Washington Reporter

WASHINGTON. – The EPA has issued new regulations that should reduce by about 27 percent the number of emissions tests it performs on cars and light trucks coming off the assembly lines.

Known as Selective Enforcement Audits (SEA), the agency uses these tests as its second line of defense in making sure that cars produced by the makers meet the emission standards they are supposed to be meeting.

In 1983, the EPA conducted 17 SEAs which involved the testing of 149 vehicles. Under the agency's new regulations, that number would be reduced by approximately 27 percent. This would be done by adopting a "sequential" sampling technique instead of the "batch" technique now being used.

The EPA said this is the same technique it uses in its heavy-duty emissions testing program and that the accuracy of the test regimen is the same, or better, than what it replaces.

While reducing the number of vehicles that must be tested, the agency is at the same time reasserting its rights to enter a plant to perform the SEA with or without the manufacturer's permission. GM has asserted that the agency must first ask the manufacturer for an OK to enter the plant before it could seek a warrant should permission be denied.

EPA said it also has the same rights when it comes to foreign plants and that it can deny permission to sell cars here if entry to such plants is not granted.

At the urging of the Office of Management and Budget the agency is dropping its proposal to require manufacturers to give it their internal quality audit data from their emission testing programs on production vehicles, but not its proposal that makers notify the agency of any production changes that might affect the emissions of the SEA vehicles selected.

EPA says it still wants sales projections from the makers so it can determine what car lines to select for SEAs and, in a move to tighten the test criteria somewhat, it will not allow makers to do dealer prep on the test cars before the SEA test.

Fiero theater

A trio of performers will finish assembly of this Fiero GT at auto shows around the country. Identical 22-year-old twins Shanya, left, and Tanya Shelton are in the foreground, while Steven Douglas, 26, assembles a side panel on the far side of the car. The Fiero Show Center includes a 16-foot backdrop, a self-contained sound system and theatrical lighting.

Sales show 6 pct. gain for Dec. 1-10

By Jenny L. King
Staff Writer

Early December domestic new-car sales surpassed the year-ago period despite of the loss of a selling day this year. Four of the six major auto makers pulled ahead of their Dec. 1-10, 1983, totals and their combined figures were up 6.54 percent.

New-car sales numbered 184,379 for the period compared with 173,062 in 1983.

The daily rate averaged 23,047, up 19.86 percent from 19,229 in 1983. There were eight selling days this year compared with nine a year ago.

Year-to-date domestic sales were up 18.20 percent, to 7,575,224 from 6,408,943.

Chrysler Corp. led the Big Three makers with its 14.32-percent sales gain. Chrysler climbed to 22,187 from 19,408 (up 28.62 percent daily rate). Ford Motor Co. was up 8.12 percent, to 48,901 from 45,230.

General Motors reported sales of 105,820 domestics, up 4.77 percent from 101,004 (up 17.87 percent daily rate). American Motors slipped 23.81 percent, to estimated sales of 3,200 from 4,200 a year earlier (a 14.35-percent decline in daily rate).

Volkswagen plunged 38.12 percent, to 706 from 1,141, or minus 30.53 percent daily rate. On the other hand, Honda sales expanded 71.48 percent, to 3,565 from 2,079 (up 93.07 percent daily rate).

Market shares for the domestic makers showed gains for Ford, Chrysler and Honda. Ford was up to 26.52 percent from 26.14 percent last year. Chrysler climbed to 12.03 percent from 11.21 percent and Honda grew to 1.94 percent from 1.20 percent.

GM's share of the market for the period dipped to 57.39 percent from 58.36 percent. AMC was down to 1.74 percent from 2.43 percent and VW skidded to 0.38 percent from 0.66 percent.

Domestic makes were a mixed bag Dec. 1-10, with most of them up compared with the same period of 1983. Plymouth was up 21.85 percent, Dodge was up 15.49 percent and Chrysler was up 6.64 percent – all on a year-to-year, not daily-rate, basis.

Ford was up 6.23 percent during the period, Mercury was up 4.76 percent and Lincoln was up 48.38 percent. Buick climbed 15.66 percent, Cadillac dipped 2.84 percent, Chevrolet was up 2.04 percent, Oldsmobile was up 6.56 percent and Pontiac was down 0.12 percent.

Estimated sales of AMC-Renault products were off 16.67 percent and AMC Eagles dropped 52.38 percent. VW Golf-Rabbit sales slipped 38.12 percent.

Trustee's attorneys focus on Swiss firm

DeLorean quizzed on $18 million

By Michelle Krebs and Edward Lapham

Attorneys for the trustee of DeLorean Motor Co. finally got their chance to question John Z. DeLorean in depositions taken last week.

DeLorean was questioned Wednesday and Thursday in Los Angeles.

The probe focused on GPD, the Panamanian-registered Swiss company retained to do development work on the sports car. Investigators believe GPD may have been the entity from which about $18 million disappeared from the project.

DeLorean also was quizzed about Logan Mfg., the DeLorean-owned subsidiary in Utah which makes ski-slope-grooming equipment, and DeLorean's general handling of the defunct car company.

On Thursday, DeLorean was questioned specifically on his turning over of his avocado ranch in San Diego County to Howard Wietzman, the California attorney who successfully defended him on drug trafficking charges last summer. DeLorean turned over the Pauma Valley ranch, valued by appraisers at $2 million, to Wietzman in lieu of legal fees.

Creditors, who are owed a total of $100 million, claim they have a right to the property.

DeLorean will be questioned further regarding DMC sometime in the future, said Sheldon Toll, an attorney for DMC trustee David Allard.

Toll refused to reveal DeLorean's responses, saying they would become a matter of public disclosure eventually.

Meanwhile, the Detroit courtroom of U.S. Bankruptcy Judge Ray Reynolds Graves turned into an auction hall for a few moments last week as three gull-winged DeLorean automobiles and steel molds for fenders were sold for a total of $34,700.

On the auction block were a DMC-12 sports car with 4,306 miles that was built as a prototype at the Belfast (Ireland) plant sometime in 1979, two 1979 DeLorean models with less than 3,000 miles but which had been shake-tested for 200,000 miles by NHTSA and steel molds for DeLorean fenders.

All of the items had been advertised by the DMC's court-appointed trustee in Chapter 7 liquidation proceedings.

The first sports car was sold to Ron Thomas, of Shorty's, Inc., a furniture company in Detroit, for $14,000. James Triplett, who is in the construction business in Columbus, O., was the top bidder on the other two cars with bids of $8,100 and $7,600.

Robert Grady, of P.J. Grady, Inc., West Sayville, N.Y., purchased the steel molds for $5,000. Grady said he expects his company, one of the original DeLorean dealerships, to attract

Chrysler may reopen pact, hits strike call

By Marjorie Sorge
Labor Editor

DETROIT. – Chrysler Corp. is not willing to reopen its contract with the UAW if the union demands a strike deadline be set for a settlement, the corporation told the union in a letter last week.

The letter does, however, say that Chrysler will be willing to sit down with the union and discuss possible amendments to the current agreement which would be beneficial to both parties.

The current contract, covering about 58,000 Chrysler workers, is scheduled to expire Oct. 15, 1985.

The UAW is calling a meeting of its Chrysler Council in early January to discuss the next move, the union said. The council requested the reopening at its last meeting in October.

The UAW first indicated it would seek to reopen the Chrysler contract when the company began posting record profits. Chrysler made $1.73 billion in the first nine months of 1984, compared with $582.6 million for the same period in 1983. Analysts estimate Chrysler will make about $2.4 billion for the year.

Chrysler workers currently make $1.12 an hour less than their counterparts at Ford Motor Co. and General Motors plus the increases negotiated in the new contracts at those two companies which range from 9 to 50 cents an hour. Under the current agreement, the $1.12 will be made up in the last seven months of the contract.

The Chrysler workers fell behind their counterparts at Ford and GM when they made more than $1 billion in concessions to the company when it was facing bankruptcy.

The move to reopen the Chrysler contract is part of the union's master plan to get the auto makers back to pattern bargaining. Chrysler fell off the pattern during the bankruptcy days.

Nissan sets up unit to handle China trade

TOKYO. – Nissan Motor Co., Ltd., has established a China Department and staffed it to handle all of its automotive trade with mainland China.

According to the Japan Automotive News, exports to China previously had been handled by the Export Department, Asia and Australasia.

Functions of the new department will be to carry out market research and analysis, improve service and parts supply and promote technical cooperation. It will also be in charge of a Nissan office in Beijing, to be opened in 1985.

The newspaper said Nissan considers China a promising market, although car ownership now is only one per thousand people.

NUMMI assembles first Nova

FREMONT, Calif. – New United Motor Mfg., Inc., the General Motors-Toyota joint-venture company, finished its first Nova at about 3 p.m. last Monday (Dec. 10) and marked the event with a short ceremony before the plant's 650 workers.

The four-door, four-wheel-drive subcompact will be shown to the press this week. Production at the facility began the week of Dec. 3.

Chrysler plans to build $500 million tech center

DETROIT. – Chrysler Corp. is planning a $500-million technical center in suburban Detroit that includes a new test track and engineering buildings.

The center, which will supplement the corporate research facilities now located in Highland Park, Mich., is expected ultimately to grow into a major academic-industry research center for Chrysler, Chrysler executives say.

Named Oakland Technology Park, the new complex will be located on a 500-acre site near two universities in the Pontiac area.

A major portion of the development will be a new test track. No timetable has been set for the project, which will take several years to complete.

Chrysler's shopping for land in the Detroit area for the proposed center early this summer set off rumors Chrysler was moving its corporate headquarters as well, but the company says executive offices will remain in Highland Park.

Chrysler is still looking for a suitable site in the Detroit area for a new wind tunnel, Chrysler executives said.

Agency cautioned on defect films

NHTSA procedures analyzed

By Helen Kahn
Washington Bureau Chief

WASHINGTON. – NHTSA should explain to TV reporters that films showing what may occur if an alleged defect exists are simulated, and the agency must be sure that the manufacturer in question has information both on an initial finding of defect and the film before release to the public.

That is the major finding of a report made by the General Accounting Office (Congress' watchdog agency) to Rep. John Dingell, Michigan Democrat.

While approving in general NHTSA's procedures in defect investigations and its fairness in looking at both domestic and imported vehicles, the GAO – at Dingell's request – examined the specific debacle that occurred on Good Friday, 1983.

On that occasion, a "rigged" film showing a rear wheel becoming detached from a General Motors car appeared on all three TV networks with no indication that it was not a real world happening and without GM's prior viewing or chance to comment. Specifically, Dingell asked the GAO to focus on that occurrence involving 1978-80 GM A-body cars.

Recently, under pressure from NHTSA, GM offered to some 3.1 million owners of those cars free inspection by dealers and free repair, if necessary, for possible rear-axle problems.

In a letter to Transportation Secretary Elizabeth H. Dole, Dingell said that failure to inform GM in a timely fashion and to explain that the film was a simulation was "outrageous" and should not be repeated. Besides, Dingell noted, it was only an initial finding, made after 23 months of investigation, and "there clearly was no emergency."

Dingell also said that the defunct National News Council had been critical of NHTSA's handling of the film, the TV reporters' acceptance and GM's own failure to publicize the film's problems. But the blame was mostly the agency's.

During the trial in which the government alleged premature rear-brake lockup on some 1.1 million 1980 X-cars, testimony was taken about similar "rigged" tests.

A NHTSA official explained in a deposition that the agency now includes with all such films the test protocol used, which would explain any equipment changes to induce failure of a component. In addition, he said, the film must carry the word "simulated" so the viewing public will know that what it is seeing is not a real happening.

In addition to that disclaimer and insistence that the manufacturer has foreknowledge and a chance to comment, Dingell also wants disclosure that the allegations stem from an "initial finding" only – a circumstance that could be changed after a public hearings and further evidence.

In related areas, GAO found that NHTSA's spending for defect investigation was at about the same ratio as the market share for domestic and foreign companies and that NHTSA's budget for such investigations has been about the same from fiscal 1981 through fiscal 1984 but will be somewhat higher for fiscal 1985.

GAO also said that domestic makers "voluntarily recalled" about 60 percent of the vehicles that are recalled, while 75 percent of the import company recalls were "influenced by NHTSA's investigation."

Also, GAO said, the "relative frequency of insurance injury claims cannot be relied upon to determine whether a safety-related defect exists in motor vehicles."

A GM entry in Brazilian market

This 1985 two-door Chevrolet Opala for the Brazilian market has styling lines reminiscent of earlier GM bodies. The first Opala was introduced in Brazil 16 years ago.

Japanese sign with Chinese to export trucks

TOKYO. – Japanese vehicle makers are selling increasing numbers of trucks to Mainland China, according to newspaper stories published here.

Largest of the deals most recently revealed is one under which Nissan will export 20,000 light trucks to China by next March.

Mazda has already started shipping 6,400 pickups to China.

Isuzu will deliver 3,000 heavy trucks to China during 1985.

Suzuki has made its first shipment of KD truck kits to China for its light Carry trucks.

Nissan's contract, with the Hainan Administrative Region of Guangdong Province, is for vehicles that can be used as freight or passenger vans. Earlier, Nissan obtained an order from China for 10,000 pickups.

Mazda made its Chinese contract through a trading firm, Toyo Menka Kaisha, for delivery to Fujian Province and the Hainan Administrative Region. Mazda's deal with the Chinese includes 1,600 passenger cars.

Isuzu is dealing with China National Machinery Import and Export Corp. The trucks will be delivered to the Ministry of Petroleum industry. Isuzu has already exported 12,000 passenger cars to China this year.

Suzuki is shipping its KD kits to Jilin City Automobile Industry Corp. The firms signed a contract in 1981 under which the Chinese will build the Carry under license. Production is scheduled at 2,000 for 1985, rising to 20,000 a year within three years.

Bricklin spells out financial terms

Yugo dealers must have $400,000

By John A. Russell
New York Staff Writer

NEW YORK. – Letters of credit which could amount to $400,000 per dealer are being required of all dealers appointed by Yugo of America in addition to the normal bank floorplanning, according to Malcolm Bricklin, chairman of the board.

Letters mailed last week to all International Automobile Importers, Inc., dealers, who are being given the first opportunity to apply for a franchise, spelled out the unusual requirement which is a first in the industry.

These letters of credit are being referred to as "standby" and must cover two months of vehicle purchase orders of the Yugo 55. The anticipated planning potential per dealer is about 45 units per month, the letter said.

The letters of credit would be used if the dealer loses bank floorplanning or refuses delivery on ordered cars.

Dealers were told the standby letter of credit does not represent an additonal financial obligation to the dealer.

But it does state that since the company is not using distributors and is not a subsidiary of the manufacturer, Zastava, "we require this additional commitment."

Bricklin's letter also stated that "we believe this commitment assures that only the strongest dealers are selling and servicing the Yugo." The letter also outlined product improvements on the Yugo 55, market strategy, new models, as well as pricing and dealer grosses among other items.

Two models of the car will be brought into the country. The base model, the Yugo 55 GV ("Great Value," according to Bricklin) has a base price of $3,990. Dealer gross on this model will be $400. A second model, the GVX will sell for $4,800. This model includes alloy sport wheels, spoilers, special paint, etc.The dealer gross on this is "approximately $650."

Bricklin said 186 changes have been incorporated into the U.S. version of the Yugo, by Zastava. This includes new seats, color-coordinated interiors including fabrics and carpeting, power-assisted brakes, new headlights, a redesigned taillight assembly and larger steel-belted radial tires.

In addition, Bricklin said all the cars will be wired for radials to ease in installation.

Yugo of America also intends to have the GVX equipped with a larger 1300-cc engine and a 5-speed transmission though "there is the possibility that the initial production of this GVX will not include the 1300-cc engine. As soon as it is available it will be standard equipment."

Bricklin estimates the model mix for the first year will be 50 percent base model and 50 percent GVX.

Yugo of America has targeted May 20, 1985 as the on-sale date for the Yugo 55 in the U.S. Production is scheduled to begin in April. The cars are 1986 models.

While the company initially wanted to appoint 650 dealers, it has scaled that down to 300 dealers. The company plan calls for it to be selling 220,000 units after the fifth year.

Consequently, the letter went on to state that "we now intend to only appoint dealers who have the facilities and capabilities for generating and supporting high-volume sales and superior service."

Bricklin did state that in areas where distance between two volume points is a factor, "we will consider the appointment of a smaller-volume dealer."

The majority of dealers will be

Ford and figure skating

The Greater Kansas City Ford Dealers will supply 70 vehicles for the 1985 U.S. Figure Skating Championships. Above, Joe Heisler, Ford district sales manager, presents car keys to Lynn Rodewald, left, and Kathy Magerkurth, co-chairpersons of the event. Also pictured is Kaycee, the event's mascot.

Yugoslavian officials laud Bricklin venture

NEW YORK. – High-ranking Yugoslavian Government officials are carefully monitoring the progress of Malcolm Bricklin's venture to sell the Yugo 55 in the U.S. and said last week that this was "the most important" business agreement signed.

For Yugoslavia, the venture between Yugo of America and Zastava, the car maker, means a 25-percent increase in exports the first year, and if sales reach 100,000 units it could mean $200 million more for that country in export capital. Now, exports are running in the $450-million range.

The venture goes far beyond anything that has developed for that country in recent years. And at least one cabinet-level official – Zivorad Kovacevic, a member of the government's executive council, and according to sources, one of the most powerful men in Yugoslavia – is personally monitoring the situation.

He confirmed to AUTOMOTIVE NEWS that he was taking a personal interest in the venture. "Nothing can be compared" with this venture, he said, adding that he was visiting the Bricklin operation in Montvale, N.J., for a briefing.

Briefings with ranking government officials have been the name of the game for Yugo of America. Two weeks ago, Bricklin executives were in Washington outlining plans to Mico Rakic, the Yugoslavian ambassador to the U.S.

He termed this deal "very significant" for the economy of Yugoslavia.

And it is the economy that is the concern of those officials. The country is struggling under a high (55-percent) rate of inflation.

While forceful economic policies have been introduced to reduce its debt and increase productivity and output, Yugoslavia is searching for joint ventures to increase exports as one method to turn the economy around.

Kovacevic told a meeting of the Yugoslav-American Economic Council last week that exports have increased 7 percent and with the Western countries as much as 25 percent.

A "current account balance surplus" of $700 million to $800 million was created, he said, not by reducing imports but by increasing exports.

The Yugo 55 venture with Bricklin is another step in developing the economy, according to those officials.

The car provides an image for the country and opens the doors for futher exports of transportation equipment, though those officials would not specify the equipment or whether Bricklin would be involved.

But one government official did say that the Bricklin joint venture was "serious."

Zastava, the manufacturer, has set up a separate assembly line to build cars for the U.S. Quality control is the key and in April,

Record output slated for first quarter

Olds is making up for lost time

By Joseph Bohn
Marketing Editor

LANSING. – After suffering through various startup problems last fall, Oldsmobile and its dealers will get off to a rip-roaring start in the new year, marketing officials vow.

Oldsmobile plans to:

1. Build a record 350,000 cars in the first quarter, ensuring plenty of product for dealers, particularly in lines like the Calais which have scarcely tested the market.

2. Stimulate sales with a new 110-day incentive, largest of its kind for a first-quarter period. The program began last week.

3. Beef up merchandising efforts with a variety of new programs, some still in the experimental stage.

Olds dealers, lacking cars, have lost market share to Buick and Pontiac this fall because of unique problems, like a switch in grille suppliers for Cutlass Ciera. But "they're going to have very good inventories," said Lynn Myers, director of marketing, pointing to planned record output that will top the previous high of 344,799 set in January-March, 1984.

Production will be particularly heavy in Cutlass Ciera, Calais and the Ninety-Eight. Olds is adding a second shift and hiring 2,400 new people early in 1985.

Its new incentive contest is called Drive for '85. It runs from Dec. 4 to March 22. Dealers compete in several groups for 330 trips of four days, five nights to Honolulu.

Sales objectives include all '84/'85 new models. In the first group the top dealers compete in open competition for 100 trips to Honolulu. There is a $500 enrollment fee.

A second group, called Fleet Elite, compete in open competition as well. There is a 750-unit minimum objective here, and dealers can win a trip either by hitting 100 percent of a retail objective, or 100 percent of a fleet objective. The entry fee is $250, and dealers can bump up to the first group by paying a $500 entry fee.

Finally, a third smaller group of dealers compete among themselves for Hawaiian trips. Their enrollment fee is also $250. Calais sales count for double credit here.

If any of the groups hit 65 percent of objective by Feb. 12 and are the biggest volume sellers in that group, they can win four day/three night trips to the Indy 500 as well. There are 280 such trips being awarded.

Dealers who hit between 100 and 119.9 percent of objectives by contest end get 50 percent of their enrollment fee back; 120-139.9 percent and they get 75 percent back. Those who hit 140 percent and don't win trips get all their enrollment back. Those who hit 140 percent and already have a Hawaiian trip, get a three day/two night extension to Maui.

On the advertising side, Olds has completed its TV and print creative for the balance of the year. It is looking at only one additional Calais execution, said P.E. Bunker, advertising manager.

The new Calais spot will tie into its being the Indy pace car. Myers noted that a lot of promotional activities are being planned to tie into that event, and there will be special advertising.

Olds also has some ads planned for the Cutlass Ciera GT and Cutlass Supreme 442 which will bow as specialty models early next year. It plans about 3,000 sales of the special Supreme 442. Production on the Ciera GT is open, though officials are anticipating about 8,000-10,000 sales.

Advertising on Calais will continue to be heavy in the second quarter, though it won't take quite the 42 percent share of budget it took in the fall, Bunker said. Bread-and-butter lines like Ciera and Ninety-Eight will also get heavy play.

Olds has a number of interesting merchandising activities on tap.

Its Olds Scrambe Golf tournament drew 40,000 participants, according to Bunker. It is a three-tiered event that starts at the local club level, with amateurs, club pros and touring pros all elibible for pieces of the $700,000 prize.

Bunker expects it to double in size next year, based on inquiries received since it wound up this year.

Olds is also promoting professionalism among its salespeople in various ways. It is using a touch-tone testing system, for example, where salespeople call an 800 number to take an over-the-phone product quiz from a computer. Competition includes written exams in which winners at the regional level ultimately compete in finals at the Indy 500 for a prize of a new car.

Olds is also distributing new GRID computers to its district managers which Ross described as having "incredible" capabilities. The portable computers plug into a phone.

Wholesale people can access a mainframe computer which gives them the complete history of a dealer before calling on him, i.e., what his sales are, what his inventory is, what his preference in cars is. The fieldperson will be able to a dealer locate a lost car or solve a variety of other potential problems, including service concerns.

Among other things, this computer will supply all bulletins on technical problems, and it can be hooked to a car to diagnose a service problem.

The OASIS system, as it is called, is being tested in two zones and will be the central theme of Olds' display at the NADA convention this year where dealers will be shown how it works.

Last fall, Olds also piloted a telemarketing program in its Atlantic region in which multimedia ads encouraged people to call an 800 number for information about its new Calais.

Myers said the division is evaluating the results. The next phase, she added, will probably be a "teleout" pilot program in which operators work with dealers and marketing groups to help them in prospecting for customers for special dealer promotional events.

Olds has also stepped up its performance promotion, Ross noted. It recently received the National Hot Rod Assn.'s manufacturers cup for total points in competitions for the first time since the early '70s. It also signed Buddy Baker for next year's NASCAR circuit.

"Our budgets aren't like Chevrolet's but they have been going up," Ross said.

Indstry sources say Old's rear-drive 88 will be phased out at the end of this model year to be replaced by a smaller front-drive version in '86. Officials confirmed there was no plan to keep the older-style version around after its replacement is introduced, as Cadillac did with its Fleetwood Brougham.

20 with Nissan

Robert Melloy, center, Melloy Datsun, Albuquerque, receives a 20-year plaque from Nissan Motor Corp., U.S.A. Presenting the award are Dennis Lassiter, left, assistant regional manager, and Kris Harris, Nissan's Denver district manager.

Highest since March

Domestic car supply moves up to 58 days

Continued from Page 1

a month earlier) was due to a production increase; the line experienced only a small sales decline during the month.

Sales at the five GM divisions fell during November, resulting in an increase in their supply levels. Some of the decline was attributable to shortages that kept customers from buying. GM started this month with an ideal 49-day supply.

Fiero was one model to experience a big change from month to month: Pontiac cut its production significantly, but not nearly as much as its sales fell. The result was a 71-day supply on Dec. 1, compared with a 47-day supply on Nov. 1.

Firebird inventory, meanwhile, plummeted as production doubled and sales increased even more than that. The big increase in the supply of full-size Pontiacs was attributable to increased production and a sales decrease.

LeSabre's supply level rose dramatically as sales fell and production increased. At Oldsmobile, Calais sales nearly doubled while production fell, resulting in a much-reduced inventory level.

At Chevrolet, Citation sales declined and production increased, resulting in its heavy stock number. And the full-size Chevrolet suffered a sharp sales decline coupled with a production increase, resulting in a much higher days-supply figure.

Sales of the full-size Cadillac also dropped during the month, but in this case it was due to product shortages. Production increased, so next month Cadillac should be in even better shape.

Volkswagen's sales rate climbed during the month, but its production of the new Golf climbed even more, resulting in a higher inventory: 56 days' worth of domestic cars. If its imports were combined with domestics, VW's inventory would be worth about 77 days.

The domestic makers shared the Dec. 1 inventory this way: GM, 45.54 percent; Ford, 31.56 percent; Chrysler, 18.61 percent; AMC, 3.50 percent; VW, 0.67 percent, and Honda, 0.12 percent.

One month earlier the shares were: GM, 45.01 percent; Ford, 31.90 percent; Chrysler, 18.60 percent; AMC, 3.65 percent; VW, 0.57 percent, and Honda, 0.27 percent.

The subcompacts and their days-supply levels were: Ohio-built Honda Accords, 4; VW Golf and Rabbit, 56; Chevette, 64; Lynx, 64; Escort, 65; Pontiac 1000, 67; Fiero, 71; Omni, 80; Alliance, 82; Encore, 84; Turismo, 87; Charger, 87; Horizon, 88; Daytona, 94; EXP, 114, and Laser, 114.

The compacts: Skyhawk, 41; Cavalier, 44; 2000 Sunbird, 47; Firebird, 47; Mustang, 48; Topaz, 58; Cimarron, 61; Firenza, 61; Camaro, 68; LeBaron, 69; Tempo, 70; Eagle, 73; Aries, 78; Reliant, 82, and Capri, 93.

The intermediates: Cutlass Ciera, 27; Grand Am, 28; Cutlass Supreme, 34; Pontiac 6000, 35; Century, 39; Celebrity, 41; Monte Carlo, 42; Regal, 43; Caravelle, 49; Cougar, 55; Phoenix, 60; Skylark, 61; Bonneville, 61; Calais, 64; Thunderbird, 64; Dodge 600, 65; Marquis, 65; Grand Prix, 66; LTD, 66; Somerset Regal, 67; New Yorker E/E-Class, 70; Citation, 100; LeBaron GTS, 150, and Lancer, 167. It should be noted these last two cars won't be on sale officially until Jan. 1.

The standard-size cars: Oldsmobile 88, 51; LeSabre, 56; Chevrolet, 70; Pontiac, 86; Crown Victoria, 99; Grand Marquis, 104; Gran Fury, 107, and Diplomat, 113.

The luxury cars: Electra, 31; Cadillac, 34; Oldsmobile Ninety-Eight, 39; Riviera, 39; Seville, 42; Eldorado, 46; Corvette, 49; Lincoln, 50; Toronado, 58; Fifth Avenue, 60; Mark VII, 87, and Continental, 88.

As demands are rejected

Canadians quit UAW; will form own union

Continued from Page 1

drawal of the Canadian region. One source said those members thought that if they voted yes on the Canadian proposals, they were voting in favor of a split in the union.

"We deeply regret that the Canadian leadership has presented this board with a set of demands which conflict with the letter and spirit of the UAW constitution and which, if granted, would cause the UAW to cease to exist as an international union in any meaningful sense, " the IEB said.

But White said that only reflected the attitude of the 24 Americans on the board.

He said the Canadians would now move to set up their own organization, still called the UAW, while maintaining "close fraternal ties" with the union in the U.S.

"This is not a war between the leadership or the two countries," White said.

"I'm not walking out of the international union. No one is throwing me out. I've been in the union for 34 years. My roots are strong. I don't do this lightly."

Both UAW President Owen Bieber and White said there was no hostility involved in the split. White said later that "a lot of very srongly held views" were discussed at the Board meeting.

"I am sorry to see this happen," Bieber said. "I think the international structure has served us both well, but I understand the desires of the of the Canadian section of the union."

During the meeting, the IEB also voted to set up a committee to check into the legal and constitutional aspects of setting up a separate Canadian union. That will include dividing up the $583.5 million strike fund.

According to a UAW source, a percentage of that fund will go with the Canadians but "this is not a per captia fund."

The Canadians account for about 11 percent of the UAW's 1.2 million members. White would not say how much of the strike fund the Canadians should get.

"It is incumbent on everybody to make sure we all come out strong, the Canadians and the Americans," White said. "They (the U.S. branch) will because they are large enough, but we also have to come out strong. Not just for our interest but for theirs.

"The worst thing that could happen is for a weak UAW to develop in Canada that can't bargain for its members.The corporations would take advantage of that."

The 120,000-member Canadian UAW is the second largest industrial union in Canada, surpassed only by the Steelworkers, which is still an international union.

Makers seek new sources in wake of UAW fracture

By Marjorie Sorge
Labor Editor

DETROIT. – The major auto makers will be re-evaluating their Canadian sourcing in light of the split in the UAW and many will stop single-sourcing in that country, according to officials at all companies.

That has led to speculation that the auto makers will pull work, and consequently jobs, out of Canada, fearing an unstable labor situation in that country. Some officials also say it could weaken the Canada-U.S. Automotive Trade Agreement of 1965 . "The decision (to split) was not to set up the Revolutionary Workers Party in Canada and put tanks around the General Motors and Ford buildings, but to set up a separate organization in Canada with a new structure," said Robert White, head of the Canadian UAW.

"It would be suicide for us to say we want to do this so we can move way ahead of the Americans in collective bargaining. Whatever we do here still will be affected by the fact that we have an integrated industry."

None of the auto makers seem to be panicking and all are taking a wait-and-see attitude although they will dual-source a lot of previously Canadian-only componentry.

"The business aspect must make General Motors re-evaluate its business in Canada," said Alexander A. Cunningham, executive vice president in charge of North American Passenger Car Operations. "It is irascible for an organization to have the ability to create a work stoppage in Canada that can shut down the U.S. operations."

During the 1984 negotiations the Canadian UAW struck GM for 13 days, closing numerous facilities in the U.S. and threatening the entire automotive operation.

Cunningham said GM would be minimizing its single-sourcing plans for Canada. It is likely, however, that GM and other auto companies would have re-evaluated the situation anyway because of the impact of the Canadian strike on U.S. operations, observers said.

Cunninghgam said GM will sit down with the Canadian UAW and see where it is going before it makes further decisions. He said the split would not result in GM's cutting back on current investment plans for Canada and would not change the reorganization plans for Canada.

John F. Smith Jr., president and general manager of GM of Canada, told AUTOMOTIVE NEWS earlier this year that Canada was being considered as GM's new small-car base of operations, saying it is the corporations' No. 1 competitor with the Japanese because of the lower labor costs in Canada. Labor costs in Canada are currently beteen $5 and $7 an hour lower than those in the U S. About half of that difference is because of the exchange rate.

In a prepared statement, Smith said, "Any structural change in the relationship of Canadian and American auto workers should reflect the fully integrated nature of the North American auto industry as it has developed under the automotive product trade agreement.

"We will have the same bargaining teams, the same member-

Trustee's attorneys quiz DeLorean on $18 million

Continued from Page 2

repair work for the automobiles.

A couple weeks ago, two prototype DeLorean autos were auctioned in California for a total of $58,000. One was sold to an attorney for $37,000 while a second went to an automobile collector for $21,000.

The proceeds from the sales go to the trustee for the bankrupt automobile company to eventually pay off creditors.

Toll said he now believes at least $20 million will be recovered, giving creditors, who are owed a total of $100 million by DMC, 20 cents on the dollar.

"That ain't bad for a no-assets company in liquidation," he said."And I'm being conservative."

During last week's hearing, Judge Graves took two issues under advisement: The issue of who should receive a $100,000 good-faith check from the Gorman Group and a request that professionl fees amounting to nearly $400,000 be paid to attorneys and accountants representing the trustee.

The judge indicated he would make decisions on those issues by year end.

Meanwhile, legal action in the DeLorean case switches to California in January when the trial involving DeLorean's ranch is scheduled to begin.

However, Toll said substantial amounts of information have not been turned over to the attorneys for the creditors. Toll said they may be forced to request an adjournment.

Toll also said another lawsuit in the DeLorean case involving Vincee Leasing Co. was filed recently in federal court in San Diego. The creditors have charged that Vincee Leasing, part of Pacific Honda, arranged a financing transaction whereby a number of DeLorean automobiles were sold with an option for DMC to buy them back in the future.

In another action involving Vincee Leasing, the creditors charge the company schemed to sell more than 50 DeLorean cars, the proceeds from which eventually went to DeLorean.

Toll said the money involved in the Vincee deals is $2 million.

At the same time, no word has come out of a year-long Detroit grand jury investigation of alleged DMC financial irregularities. The probe focuses on alleged criminal tax fraud and bankruptcy fraud, particularly the disappearance of nearly $18 million in car project funds.

Lone Star Pontiac breaks ground in Austin

AUSTIN, Tex. – Lone Star Pontiac has broken ground for construction of the first General Motors dealership ever in South Austin.

Dealer is George Lowrance. The site will also house new facilities for Lowrance's existing Porsche-Audi dealership. The combined dealerships will have 40 service stalls and parking for over 500 automobiles.

15 GM plants work Saturday

Auto output stays above 180,000

By Louise Kertesz
Detroit Reporter

Domestic auto production continued at a high level last week as General Motors scheduled Saturday overtime at 15 assembly plants.

The scheduled 181,176-unit output held steady (down 0.21 percent) with the previous week's 181,558, which was just 1,469 cars short of the weekly record for the year set during the first week of December.

Last week's total was 7.93 percent more than the year-ago week's 167,860.

So far this year, 7,648,379 cars have been built, an increase of 15.27 percent over the 6,635,197 assembled last year at this time.

Companies shared last week's estimated production as follows: GM, 57.53 percent; Ford Motor Co., 22.19 percent; Chrysler Corp., 14.79 percent; American Motors, 2.65 percent; American Honda, 1.74 percent, and Volkswagen of America, 1.10 percent.

AMC announced that it will cut production of the Alliance and Encore at Kenosha from 960 to 860 a day, beginning Jan. 7.

GM scheduled two overtime shifts Saturday (Dec. 15) at the following plants: Lansing (Oldsmobile No. 2), Flint (Buick B and G lines), Detroit, Doraville (Ga.), Fairfax (Kans.), Janesville (Wis.), Lakewood (Ga.), Leeds (Mo.), Linden (N.J.), Lordstown (O.), Norwood (O.), Willow Run (Mich.) and Wilmington (Del.).

One overtime shift was scheduled Saturday at GM plants in Lansing (Oldsmobile No. 1) and Orion Township, Mich.

Ford scheduled overtime Saturday at its plant in Wixom, Mich.

Chrysler also scheduled overtime Saturday at its plant in Sterling Heights, Mich.

Chrysler's plants in Newark, Del., and St. Louis (No. 2) are scheduled to work two nine-hour daily shifts this week (Dec. 17). Two shifts at the Jefferson plant (Detroit) will work a half hour overtime daily this week.

Makers seek new sources in wake of UAW fracture

Continued from Page 49

ship, the same political structure and some of the same leadership," White said. "We are going to pay dues to Toronto and not participate in the international bargaining convention.

"We will try to bargain a collective agreement without taking our membership on strike. If that means we lose the GM small car, that doesn't make for an intelligent decision by the corporation. They have nothing to fear from us."

Arthur W. Hanlon, vice president – industrial relations, Ford of Canada, said he would rather the split had not occured, but Ford has not planned anything "dramatic" in changing its Canadian operations.

"Bob White has said he is not doing this to hold the companies at ransom and I take him at his word," Hanlon said.

"I don't expect White and the Canadian UAW to do anything dumb with their new independence."

But, he said, the split could result in changes in the Auto Pact, which requires the auto companies selling in Canada to build cars there equal to the number they sell there.

He said the split could weaken some of the benefical aspects of the pact if the auto companies feel they must dual-source parts operations and "hot-selling" cars to avoid shortages caused by work stoppages.

In Detroit, Stanley Surma, executive director – labor relations staff at Ford Motor Co., said Ford will wait and see what happens. He said he believes the Canadian leadership is "rational and mature" and he does not expect irresponsible demands.

But the company will be checking into numerous questions which arise from the split, he said. He cited as an example the validity of the current agreement, since the Canadians will no longer be part of the international union.

Surma was head of the company's Canadian labor relations staff until earlier this year

Alfred S. Warren, vice president – labor relations at GM, said he is concerned about the split but GM, too, will wait and see what happens, although it will likely stop single-sourcing in Canada.

"In the long run the split is a mistake," he said. "It destroys the image of an international union and it's a bum idea. I am dismayed for Canada."

Chrysler also will rethink its sourcing plans, according to Thomas W. Miner, Chrysler vice president – labor relations.

Chrysler will be the test case for the industry-union relationship because it will be the first company negotiating after the split. That contract is set to expire Oct. 15, 1985.

American Motors, also a major investor in Canada, had no comment.

6-year milestone passed by trucks at 3 million

Domestic truck production passed the three-million mark last week for the first time since 1978, when 3,676,747 trucks were assembled.

Year-to-date, 3,038,136 trucks have been built, 30.37 percent more than the 2,330,394 completed last year at this point.

Last week's targeted output of 69,115 trucks kept pace (down 0.58 percent) with the previous week's 69,515 and was 17.13 percent better than the year-ago week's 59,005.

General Motors scheduled two overtime shifts Saturday (Dec. 15) at its plants in Pontiac (No. 6), Flint (No. 1 and 2), Janesville, Wis., and St. Louis.

Chrysler Corp.'s assembly plant in Warren, Mich., is scheduled to work two nine-hour daily shifts this week (Dec. 17).

Canadian makers build millionth auto of year

Canadian car production topped the one million mark last week for the first time since 1978.

Reaching 1,009,438 autos built to date this year, output was 6.86 percent ahead of the 944,595 assembled last year at this point.

Last week's scheduled production of 20,667 cars was up 7.27 percent over the previous week's 19,267 but was 10.50 percent less than the year-ago week's 23,092.

Targeted production of 18,679 trucks last week held steady (up 2.00 percent) with the previous week's 18,312 but was 23.80 percent better than the year-ago week's 15,088.

Chrysler Corp.'s Windsor (Ont.) plant assembled 2,526 Plymouth Voyagers, 2,796 Dodge Caravans and 594 Mini Ram Vans last week, bringing the year's total of T-115s built to 229,900.

U.S. agencies required to use retreaded tires

PEBBLE BEACH, Calif. – President Reagan has signed a bill requiring all federal procurement agencies to purchase retreaded tires so long as retreads continue to cost less than new tires, according to the Tire Retread Information Bureau here.

This new legislation marks the first time the Federal Governemtn will be an active participant in helping the problem of used-tire disposal by using retreads on government vehicles.

FTC cites Detroit deals for closing on Saturday

By Helen Kahn
Washington Bureau Chief

WASHINGTON.–The FTC has charged 105 auto dealers in the Detroit area with illegally conspiring to close on Saturdays and most week nights. The Federal Government agency also charged some of the dealers with illegally agreeing not to advertise prices.

The complaint adds that some dealers who did not abide by the restrictions suffered threats and property damage.

Those actions violated the antitrust laws because they reduced competition among dealers, according to the FTC. Consumers were hurt by having their ability to do comparison shopping lessened and new dealerships had their ability to market aggressively and increase their market share curtailed.

The complaint grew out of an investigation that began last spring.

In Detroit, spokesmen for the Detroit Auto Dealers Assn. declined to comment specifically on the FTC action until they had seen a copy of the complaint.

The FTC complaint lists 115 individuals as well as 105 dealerships and it names the Detroit Auto Dealers Assn. and 18 groups of dealers selling particular lines.

Those groups and individuals are charged with adopting and adhering to a schedule limiting hours of operation. Dealers were not to open on Saturday (except for occasional special sales) and were to close evenings except for Monday and Thursday. Acccording to FTC staff, Detroit is the only major metropolitan area without Saturday sales hours.

Some of the evidence used by FTC was minutes of dealer association meetings. A newspaper ad by the Ford Dealers of Metropolitan Detroit even said they had "voted overwhelmingly" to close their salesrooms on Saturdays.

FTC said there were direct and indirect threats to coerce some dealers into adhering to the restricted hours of operation. The commission cited newspaper accounts of dealers who opened on Saturday suffering damage to new and used cars, being picketed, having their switchboards jammed, their windows broken and their lives threatened.

The FTC complaint also charges the Chevrolet, Chrysler-Plymouth and Cadillac dealer associations, dealers and associated individuals with conspiring to restrict advertising or publishing prices of vehicles and with prohibiting dealers from using classified ads in the local daily papers.

Such actions, the commission said, help dealers maintain higher prices and hurt consumers by

U.S.auto production is highest since 1979

Domestic auto production in 1984 is the highest in five years, and December output is the best in 17 years, according to preliminary figures.

The year's output of 7,830,090 cars is the best since 1979's 8,418,369, and December's targeted 727,472 build is the highest for the month since 1967's 790,694.

The estimated 1984 truck build of 3,105,000 is the best since 1978's 3,676,747. Also the best since 1978 is the slated December output of 275,397. The December total was 276,248 in 1978.

Ford promotes Benton, Lataif, Rewey, Wagner

By Richard Johnson
Detroit Reporter

The upcoming retirement of Thomas C. Page, Ford Motor Co. executive vice president in charge of Diversified Products Operations, has led to a shuffling of top management ranks, including changes at the head of both the Ford and Lincoln-Mercury divisions.

Page will turn 65 on March 28, 1985, and will retire from the company and the board of directors on April 1.

Thomas C. Page

Philip E. Benton Jr., vice president—sales operations for Ford's North American Automotive Operations, has been named to succeed Page as chief of Diversified Product Operations, effective Feb. 1. No replacement for Page on the board of directors was announced.

Benton will be replaced by Louis E. Lataif, Ford Division general manager and one of the company's fastest-rising executives.

Lincoln-Mercury General Manager Robert Rewey will succeed Lataif at Ford Division, and Thomas J. Wagner, Ford Division's general marketing manager, will take over as general manager at Lincoln-Mercury.

The changes were reported just over a month after Ford announced a new management team that will assume command following the retirement of chairman Philip Caldwell early next year. Ford President Donald Petersen and Harold (Red) Poling, executive vice president of North American Automotive Operations, will become chairman and president, respectively, on Feb 1.

Caldwell last week said Page will devote his final months at Ford to "designing the framework for an education and training program that will keep the knowledge and skill levels of company executives at the leading edge of business practice worldwide."

Page, who has been with Ford 32 years, has been in his current post since April, 1981, and became a member of the Ford board of directors in September of that year.

He was named general manager of the former Autolite—Ford Parts Division in 1969 and was elevated to president of Philco—Ford, a predecessor of Ford Aerospace and Communications Corp., in 1971.

Page became a vice president in 1975 and later held a series of top jobs, including vice president for Latin American Automotive Operations. He currently serves as chairman of three non-automotive subsi-

Austin buys in Taiwan

TAIPEI, Taiwan.—The Taiwan Government's Industrial Development and Investment Center announced that Britain's Austin Motor Co. will buy 13 types of auto parts from Taiwan manufacturers. They include headlamps, heaters, air conditioners, wheels, seat frames, glass, sheet strips, lock sets, plastic injection moldings and rubber to metal bondings.

1,400 Astros shipped

WARREN, Mich.—Chevrolet has shipped 1,400 Astro compact vans to dealers so far, all cargo models. It's building about 200 vans a day, only three to five of which are passenger models.

A Christmas Fantasy

Or, Season's grittings from Detroit, one more time

'Twas the night before Christmas and, believing in Santa,
Bean counters were counting, and counting up plenty.
For GM, Ford and Chrysler and e'en AMC,
The year's take was $10 billion—that's spelled with a B.
And speaking of billions, that's what GM spent
Just to get itself inside the EDS tent.

The Koreans made noise like they're ready to start
An attack on this market, and the really hard part
Is that GM's the patron; doesn't care one iota:
It's found a solution to the Japanese quota.
The threat doesn't end with the moves by Daewoo;
For Mexican K-cars are coming here, too.

New labor pacts followed six days of fussin'
But the union still lost its Canadian cousin.
Bricklin lost Bertone, but still needs no new pep,
He's about to go dancing, with the old Yugo two-step.
Uncle Sam's in Detroit, and he's looking for ways
To make all the dealers stay open six days.

With the Japanese soaring, GM was no dummy,
It turned to Toyota, to build 'em by NUMMI.
Mazda decided it couldn't stay out, either
It'll build 'em at Flat Rock and give Ford a breather.
Additions are planned by both Honda and Nissan
That's good for us, too, but we still have to listen
To the sound of those ships steaming up to our shore
With millions of imports, just like before.

Dealers and many old-timers were stunned
By the sudden retirement of GM's Bob Lund.
Meanwhile, in Dearborn, Ford got a new chief;
"All's well that ends well," said Caldwell, in brief.
Iacocca's life story hit the best-seller list,
In dumping on Ford, there's not much it missed.

Then Santa blew in, with a sleigh just enlarged,
Upsized to fit reindeer who are now turbocharged.
He had room in his sled for high-mileage trucks
And a neat little coupe priced at three-thousand bucks.
And I heard him exclaim as he drove toward the stars,
"I wish you cool profits and hot-selling cars."

—Robert M. Lienert

Nova takes a bow on Coast as new GM-Toyota car

By Matt DeLorenzo
Los Angeles Reporter

FREMONT, Calif.—The Chevrolet Nova produced by the GM-Toyota joint venture was unveiled last week at New United Motor Mfg, Inc.'s, assembly plant here.

The medium-blue metallic subcompact was the third full-production-run car built by NUMMI. Three pilot run models were also built, according to NUMMI officials. Officials from Chevrolet, Toyota and NUMMI were on hand at a press conference.

Sporting quad headlamps and the Chevrolet bow tie on the front, the Nova is similar in appearance to the Sprinter which Toyota sells in Japan. Sprinter is part of the Corolla family of vehicles.

Tatsuro Toyoda, NUMMI president, said he felt like a new father. "I am not sure what to do, " he quipped, "pat it on the hood or pass out cigars."

Robert Burger, Chevrolet general manager, said NUMMI's capacity of 250,000 vehicles will be important to the division's goal of selling one million small cars a year.

"No other single plant anywhere is dedicated to producing that many Chevrolets, " Burger said. "In fact, NUMMI is going to be one of GM's biggest suppliers when it reaches full production."

Production of the Nova is expected to begin slowly with the plant operating initally on only one shift.

"We support NUMMI's production plan to bring the Nova on stream at what may seem to be a slow pace, " Burger said. "But we know that will ensure that NUMMI meets its quality targets."

He added that he doesn't expect Nova to go into nationwide distribution until 1986. Although Burger wouldn't confirm Chevrolet's sales plan for the new car, it's likely that the company will chose to market it in areas that have not benefited from GM's Far East strategy—namely the middle part of the country.

Chevrolet is currently selling the Suzuki-built Sprint in nine Western states, while 17 Eastern states have received the Isuzu-built Spectrum. Under Japan's Voluntary Restraint Agreement, GM has been alloted 17,000 Sprints and 29,000 Spectrums for the year ending next March 31.

Chevrolet may use the Chicago Auto Show in February to introduce the car and then roll out sales in the Midwest.

According to Tom McDaniel, Chevrolet's director of international programs, Chevrolet expects to sell about 36,000 1985 Novas through the summer. The

March trial date set for challenge on GM-Toyota

WASHINGTON.—Trial on the Chrysler challenge to the new General Motors—Toyota joint venture will not start until March 4, although cars will start to roll from the NUMMI plant in Fremont, Calif., next month.

Federal Judge Thomas Hogan made the announcement after ruling on a number of issues—including that Chrysler has standing to sue and denying some GM motions.

Chrysler insists that it will pursue its efforts and claims that if it wins, cars can still be produced at the Fremont plant but perhaps be made by GM alone or by Toyota alone. Meanwhile, Chrysler can pursue its own possibilities for joint ventures—either with Japan's Mitsubishi or with South Korea's Samsung group.

On a separate front, GM has not yet asked NHTSA whether it can include NUMMI cars in its CAFE calculations.

Christmas greetings from Chevrolet

Chevrolet is sending holiday greetings to everyone passing by the General Motors Technical Center in Warren, Mich. The 300-foot by 21-foot sign, with letters 15 feet high is visible day and night on the Chevrolet Engineering Building. The banner is the brainchild of Paul Britten, a University of Detroit senior architecture student who gained attention during the World Series when he constructed a 10-story high banner saluting the Detroit Tigers that was hung on the GM Building in Detroit.

On decision to split from international UAW

Bieber calls Canadians 'wrong'

By Marjorie Sorge
Labor Editor

DETROIT.—The Canadian UAW's decision to split from the international union is "both erroneous and wrong" and could be a setback for Walter Reuther's dream of a multinational union, said UAW President Owen Bieber.

In an interview with Automotive News, Bieber accused some people of using the 1984 negotiations as a "vehicle to stir up nationalistic emotions" to accomplish the split.

"Bob (White, UAW vice president and head of the Canadian region) said it is pretty much a process of evolution," Bieber said. "This pretty much tells you what his thinking was and what the thinking of others was."

Bieber also said the name of the UAW could change since the question now is, "Is it national or international?" The UAW's full name is the International Union, United Automobile, Aerospace and Agricultural Implement Workers of America.

White has said the Canadians left the international because they needed autonomy, especially in collective bargaining, and could not get that in the association with the international union.

The 1984 contract with General Motors of Canada, was basically negotiated on this side of the border by Bieber and Alfred S. Warren, GM vice president, industrial relations, sources said.

That move was labeled "interference" by the Canadian leadership.

Bieber, however, said it was not interference since he is the president of the UAW and is responsible for all contracts negotiated by his union.

"I think it was a good settlement," he said. "To use that to try to whip up nationalistic emotions and say that now leads us to the point of separation is both erroneous and wrong. I do resent people trying to use me individually in trying to accomplish what they set out to do."

The big issue in the 1984 talks

Import inventories rise to 17-year high

By Kathleen Hamilton
Assistant Managing Editor

Increases in the inventories of German and Japanese cars pushed the Dec. 1 import-car stockpile to its highest level in 17 months: 232,152 units.

That was enough for 27 days: Still low for an industry that needs about a 60-day supply of imports for unimpeded sales, but higher than importers and dealers have seen for seven months.

Inventories increased despite sales increases for all but the Japanese makes, which once again suffered sales declines because of shortages.

The inventory of imported trucks rose to a 12-month high: 98,396 units But sales increases—especially at Nissan and Toyota—resulted in a days-supply level that exactly matched the Nov. 1 level of 41.5 days.

The Dec. 1 stockpile of 232,152 cars compared to the month-earlier total of 186,567 units and the year-earlier total of 224,290. The 27-day stockpile was higher than the 24-day supply of one month earlier but lower than the year-earlier level of 29 days.

Several import makes experienced big month-to-month changes in their days-supply figures. Chevrolet's big jump, from 34 days to 126 days' worth, was mostly because the company was stockpiling the new Isuzu-built Spectrum early in November and didn't begin selling it until mid-month. Its Suzuki-built Sprint, which accounted for Chevy's entire 34-day supply last month, registered a 41-day supply level this month.

The big numbers at Audi, BMW and Porsche all were due to increased shipments for the start of the new model year, and although those inventories may look bloated now, they will be

IH returns to black after 5 red-ink years

CHICAGO.—International Harvester, which has been losing money since its record-setting year of 1979, reported it turned a profit in the fourth quarter of fiscal 1984, though it showed a loss for the full year.

The announcement by Donald D. Lennox, IH chairman and chief executive officer, came less than a month after IH revealed plans to sell its agricultural equipment business, which has been draining the company of about $300 million a year, to Tenneco, Inc., the parent company of the J.I. Case farm equipment company.

Net income for the quarter amounted to $7 million, or 3 cents per share, on sales of $1.30 billion, compared with a loss of $84 million, or $2.77 per share, on sales of $1 billion a year ago.

The fourth-quarter earnings included a $10-million charge for an adjustment to the provision for operational restructuring costs and extraordinary income of $2 million from tax-loss carryforwards. Income from continuing operations before unusual items was $15 million, compared with last year's $84-million loss.

Despite the fourth-quarter profit, IH continued to show a loss for the year. The net loss for the year amounted to $55 million, or $1.34 per share, compared with last year's loss of $485 million, or $15.70 a share, which included $159 million in extraordinary income and unusual items.

Losses from continuing operations amounted to $50 million, compared with a loss of $434 mil-

U.S. firm denies it plans to leave South Africa

Ford continues talks with Amcar

Ford Motor Co. plans to conclude negotiations with South African auto company Amcar Holding PLC in January, said a Ford spokesman, who denies allegations Ford plans to move its operations out of South Africa in response to that country's policies of racial segregation.

"They are business discussions based on business considerations," said the Ford spokesman, who declined to specify the nature of the negotiations.

Ford previously announced it was holding talks with Amcar, and reports in the South African press indicated the companies were discussing a joint production facility to build Ford products—a move that would likely mean shutting down at least a portion of Ford's South African assembly operations. (See Automotive News Dec. 3).

• Ford's two Port Elizabeth facilities currently produce some 40,000 vehicles annually, making it the largest U.S.-based auto company in South Africa—about twice the size of General Motors. Ford's current market position also makes it about equal to Amcar, but Amcar currently is only using about half its assembly capacity.

Amcar is the auto making subsidiary of Anglo American Co., a South African mining conglomerate that is a major supplier of gold and precious metals—including a signifant percentage of the U.S. auto catalyst business. Formerly named Sigma Corp., Amcar began buying out South African auto interests of Chrysler Corp., Mitsubishi and Toyo Kogyo Co., Ltd., in the late 1970s.

A Ford merger would mean its combined sales could challenge Toyota Motor Co., Ltd., currently leader in South Africa with some 25-percent share of market.

Stempel says the teams are formed

BOC setup is nearly complete

By Marjorie Sorge
Labor Editor

WARREN, Mich.—The Buick-Oldsmobile-Cadillac reorganization will be almost fully operational by mid-January, the first anniversary of General Motors' reorganization announcement, according to Robert C. Stempel, vice president and group executive for that group.

According to Stempel, the financial, marketing, major engineering and planning functions are in place.

"I wouldn't want to say we are 100 percent there, but we will be between 75 and 80 percent (by mid-January)," he said. "We have formed up the teams around the platforms and have started working as teams."

In an interview with AUTOMOTIVE NEWS, Stempel also said:

1. There will be more personnel cuts in the financial arm of the BOC group.

2. The biggest growth in the automotive end of GM's business will be at Chevrolet.

3. Some classic models will have a life span of 10 years under the reorganization.

4. The biggest fight in the marketplace will be in the middle market—mid-priced to higher-priced cars where the customers try lots of new options.

5. GM must price more competitively.

6. The BOC group will not be involved in very much diversification and will continue to keep automobiles as the primary business.

7. GM will be able to get cars from the drawing board to the dealers' showrooms in three years in the very near future and will be able to make feature changes within 18 months by the 1990s.

8. Cadillac's market share will stay about the same at 4 percent or show a little growth while Buick and Oldsmobile will be "fighting like the devil to hold 12 to 13 percent and we will obviously be trying to increase that incrementally."

9. GM will be sharing a lot more components with other auto makers in the near future.

Feature changes will be playing a big role in future marketing and manufacturing operations, he said. GM engineers are already getting numerous features "shelf ready" so they can be addded to the vehicles quickly, eliminating the extra engineering time, he said.

"We are shooting for getting these things into the car within 18 months," he said. "But, realistically, in the 1980s it will be two years. But, by the '90s, we had better be responsive in powertrains, car configurations and features in something less than two years."

It will be just about then, in the 1990s, that the computer-age children of today will be ready to buy cars, and they will want computer-age features, Stempel said.

High Toyota jobs go to McCurry and Perkins

TORRANCE, Calif.—Toyota Motor Sales, USA, Inc., has named Robert B. McCurry, 61, to the new position of executive vice president and has promoted James Perkins, 49, to the post of group vice president for sales, marketing and distribution.

In his new position, McCurry will be in charge of sales, marketing, distribution, parts, service and customer relations. He will also be responsible for Toyota Industrial Equipment, a division of Toyota Motor Sales, USA, that imports and sells mainly forklifts.

McCurry spent 28 years with Chrysler Corp. and rose to group vice president for sales, parts and service before retiring in 1978. He had been in charge of Toyota's national sales operation since May 1, 1984, after serving as general manager of the company's Los Angeles region since Jan. 1, 1982.

Perkins assumes McCurry's previous position and will report to McCurry. Besides sales, marketing and distribution, Perkins is also responsible for product planning, dealer development and a subsidiary called Vehicle Processors, Inc.

Perkins joined Toyota in September, 1984. Prior to that, he had been with General Motors for 24 years, most recently as Buick general sales manager.

"When I think of what they consider normal, it blows my mind," he said. "The expectations of those 10, 11, 12, 14-year-olds—by the time they are 25—are going to be so far beyond my imagination it is incredible."

Besides the market still growing up, GM will attempt to appeal more to the lower-wage section of the economy.

"That group of consumers will be big enough and will open up a niche for affordable cars with a host of features," Stempel said. "They don't want to buy second-hand cars and they don't want to buy econoboxes. That becomes a new challenge to get vehicles with features that will appeal to that part of the populace."

This desire for new and different things will also play a role in BOC's search for joint-venture partners. There are a lot of products the customers want, but it is not financially feasible for GM to create them alone because of the low volume, but GM does not want to miss the window in the market, he said.

According to Stempel, this desire is going to produce "some very strange marriages" and he indicated BOC will be proposing to other companies in the future.

BOC will also be getting some cars from the Chevrolet—Pontiac—GM of Canada Group and will still be sharing products with that unit. But BOC, like other GM units, will also share products with other auto makers, because of the cost, he said.

"We are going to see more and more of the major components shared by manufacturers, shared by people and used by people," he said. "For example, auto

For families of yesterday and tomorrow

The contrast in family cars from yesterday to tomorrow is shown at a classic car show at Chrysler Corp.'s Advanced Product Design Center in Carlsbad, Calif. The 1990s concept family wagon, right, has more passenger room than the restored 1939 Chrysler New Yorker sedan, according to John Pinko, Chrysler California design specialist. At left is Sherwood Kahlenberg, national president of the Walter P. Chrysler Club.

Chrysler begins ads for its new H-cars

By Joseph Bohn
Marketing Editor

Chrysler broke its $10-million campaign on the new H-body LeBaron GTS and Dodge Lancer recently in a pre-launch buildup to the January introductory quarter.

As previously reported, Bennett E. Bidwell, executive vice president, characterized the $10-million expenditure as about "normal" for this kind of launch. A.C. (Bud) Liebler, Chrysler-Plymouth general marketing manager, described the launch for LeBaron GTS as "bigger than either the Chrysler Laser or the Plymouth Voyager launches last year."

The ad campaign for GTS got under way with TV spots on the $450,000 Chrysler Team Invitational golf event on ESPN cable Dec. 13-16, and on NBC pro football telecasts that weekend.

GTS is aimed at the growing "yuppie" market. Print headlines call the GTS an "American sedan that outperforms BMW 528e and Mercedes 190E." Illustrations show the GTS performing on the road and in scenic settings with Ricardo Montalban the spokesman. They also feature the car's interior electronic instrumentation and leather bucket seats.

Tags also say, "We engineered it to outperform Europe's best. It does." A footnote references U.S. Auto Club tests.

Print includes four-page gatefolds in 15 major news weekly, buff and technology magazines, along with spreads in news-weekly, women's, life-style and other publications.

TV is heavy in sports and prime time, as well as some cable.

Kenyon & Eckhardt handles Chrysler-Plymouth.

Lancer TV, including teaser ads that broke in mid-November, and print that followed in mid December, uses the science-fiction effects first seen with the Daytona Turbo Z.

The ads feature people on a road, searching for something, and a hero who sees a glowing something on the ground. A key which he pulls from a glowing crystal diffuses light toward a mountain-top vehicle and so forth. The voiceover says, "When a Lancer makes its presence known, everybody takes notice. Get the key that unlocks the" Lancer's performance.

Commercials of this ilk, such as Lancer and Daytona Z, were done by Dennis Gelbaum, former BBDO executive who now heads Navarac Films, New York. He directed the spots.

First prodcut of 'negotiated' regulation process

EPA 'escape mechanism' due

By Jake Kelderman
Washington Reporter

WASHINGTON.—The EPA is expected to sign this week an agreement with a coalition of heavy truck makers, heavy-duty engine makers, environmentalists and state and local environmental officials that will pave the way for the agency to set stringent emission standards for such vehicles.

At the same time, it will provide the makers with an "escape mechanism" if one or more cannot initially meet those standards.

The first product of the agency's experimental "negotiated" regulatory process, the agreement is the result of a year's work by 23 representatives of environmental, industry, trade and governmental groups.

It would call for makers who could not meet emission standards to pay a penalty equal to the cost of what 90 percent of the makers were paying to comply with the standards, measured in terms of hardware, reduced maintenance, enhanced fuel economy and the like. Failure to comply in the second year would result in an exponential increase in the penalty.

EPA officials said they were delighted by the development because they would now be able to set emission standards based on the experience of industry leaders while not threatening their lesser counterparts.

They expect that no more than 10 percent of the heavy- and light-duty trucks manufactured would need to make use of the pollution tax option in the first year it is available and that fewer than 2 percent would need it in the third year, given the exponential rate of increase in the penalties.

"Indeed," said the official, "we rather doubt that anyone will use the penalties by design because of the extreme cost and the onus of failing to meet the emission standards."

The pollution tax option was authorized by Congress in the 1977 Clean Air Act amendments in recognition of the uneven abilities of the various manufacturers to develop emission control technologies and the importance of setting emission standards as stringent as possible.

However, Congress did not want to reward those slow to toe the line in meeting emission standards.

The agreement will serve as the basis for final rulemaking, the EPA official said. That is expected to be completed by the end of 1985. The taxes will be determined in relation to the amount, in grams-per-brake-horsepower-hour, failing vehicles or engines are above a given standard and they will be applied on a fleetwide basis rather than on a vehicle-by-vehicle basis.

It is also expected that the pollution tax penalty option will be available in the event of a Selective Enforcement Audit (SEA) failure, but not to avoid a recall.

It's Ronald McDonald

Reclining atop a 1985 Dodge 600 convertible, the official car of Chicago's McDonald's Charity Christmas Parade, Ronald McDonald greets fans. The Metro Dodge Dealers supplied 15 convertibles for carrying parade and city celebrities.

Oral arguments next on passive restraints

Continued from Page 7

automatic belts and by failing to require installation of air bags and nondetachable belts.

The government says Dole was aware of "considerable public fear and dislike of nondetachable belts" and the potential for disabling them and also aware of the considerable extra cost for an air-bag/nondetachable belt mandate.

The government notes it is "correct" for Dole to consider both cost and public acceptability. But State Farm, in its reply brief, labels the government's brief as yet another try to avoid setting a passive-restraint standard.

"Despite a 14-year delay in implementation of the rule, the agency now urges that the court should not decide this case for several more years, and that, if it then rules against DOT, it should remand to the agency for additional years of rulemaking and leadtime," State Farm said.

"The court should reject these transparent efforts at delay and finally resolve the controversy at this time."

State Farm said the issue of whether the MUL rescission provision violates the law will not gather any more relevant facts for court consideration three or four years later and therefore is "ripe" for decision now.

Were the court to reach the issue of damage, added State Farm, it would find delay would mean the needless loss of thousands of lives. If the rule were rescinded, the insurance firm said, it could not even be reinstated in less than a year because of the need for leadtime, and the auto makers might even extend that delay if they have scrapped their plans for passive restraints.

State Farm thinks the government is wrong in its arguments but if the court held for the government and acted now, a remand could occur in 1985, not 1990. Furthermore, add the plaintiffs, delay encourages the auto makers to delay work on advanced systems and instead devote their energies to lobbying for enactment of MULs.

Finally, State Farm says, delay extends the dilemma faced by states: Will enactment of strong MULs result in wiping out the passive-restraint rule that offers additional protection for their citizens?

State Farm disagrees with the government about the relevance of the cases cited to show the MUL rescission provision is not severable. Instead, it cites the 1966 law giving the appellate court the power to affirm or set aside Dole's orders "in whole or in part."

• The record, moreover, shows that passive restraints are desirable in and of themselves, not only if states enact MULs, according to State Farm. State Farm also argues the state MUL rescission provision violates the safety act's goal of uniform national standards.

Although it is possible a passive-restraint standard may still exist in 1990, it is also possible it will be rescinded, "leaving as many as 75 million Americans in 34 states with no more protection than they have today," State Farm said.

DOT's failure to consider alternatives to have both MULs and a standard, said State Farm, is arbitrary and capricious and so is its lack of evidence that MULs covering two-thirds of the population are the equivalent of the passive-restraint standard.

Heritage Honda builds

Heritage Honda, Murray, Utah, has broken ground for this new 40,000-square-foot facility at its present site. When it is completed, in late spring of 1985, the present building will be razed.

Ford to simplify car lines with 3 levels, Edsel says

NEW YORK.—In the near future, Ford Motor Co. will be moving to offer only three models within each of its car lines, according to Edsel Ford, advertising manager for Ford Division.

Speaking at an International Motor Press Assn. meeting here last week, Ford said the company is going to the Japanese theory of offering a "complete car," and many options now available will become standard equipment.

The company, he said, wants to offer an entry-level car, a luxury model and a sporty model within each car line. He would not be specific on which car lines would be affected, or when the moves would be completed, though he said that Escort for next year would be offered only in "L" and "GL" versions. The GT, a sporty Escort, has spun off on its own, he said, but this follows the direction the company wants to travel.

With the model simplification, he said, the company would have to make some pricing concessions. It would be impossible to take the prices for optional equipment that becomes standard and simply add that to the sticker price, he said.

He said Ford would have to "shave some profit and would bite the bullet," but he said that no pricing decisions have been made.

He said model simplifications would reduce manufacturing and marketing costs.

FTC cites deals in Detroit for Saturday close

Continued from Page 1

keeping important information from them.

The FTC complaint starts a legal proceeding during which the charges will be ruled on by an administrative law judge. If the judge finds a violation of law and the commission affirms it, the agency may seek certain specified relief.

For example, the FTC could make all respondents stop their illegal activity and report any violations of the FTC order. It could also make associations keep records of their meetings, change their bylaws to prohibit any such future conspiracies or it could even dissolve dealer associations.

It could also order dealers to open for additional hours during a period of up to one year and order dealers to notify the public of their new hours in any advertising they run.

Although Detroit Auto Dealers Assn. officials declined to comment on specific allegations, they defended their Saturday closing policy last week.

"I'm surprised they did file a complaint," said association president Lou LaRiche, of Lou LaRiche Chevrolet, Plymouth, Mich. "This is a labor problem, not a restraint of trade.

"We've been closed on Saturdays for 11 years now, so what's the big deal? We are open enough hours so that if somebody wants to buy a car, by golly they can."

LaRiche said the shorter hours have "worked out quite well for everybody." He said dealer sales staffs now have less turnover than in the days of Saturday hours and also boast more college graduates and "professional types."

Daniel Hayes, executive vice president of the association, said he will have no reaction to the FTC complaint until he reviews the document. However, he said, "Nothing about the federal bureaucracy surprises me."

Import stocks move upward to 17-year high

Continued from Page 2

sold quickly to a market hungry for those models.

The reduced supply levels at Alfa Romeo and Renault can be traced to increased sales.

The inventory of new imported cars at dealerships and ports was divided this way on Dec. 1: Japanese, 61.81 percent; German, 25.83 percent, and cars from other countries, 12.36 percent.

One month earlier the shares were: Japanese, 61.07 percent; German, 23.14 percent, and other, 15.79 percent.

The stockpile of new imported trucks (including U.S.-made Nissans), at 98,396, was the largest in 12 months: On Jan. 1, 1983 there were 107,535 trucks in inventory.

As noted, those figures translated into a 41.5-day supply both for the latest count and for the one on Nov. 1. On Dec. 1, 1983, the truck stockpile was good for 55 selling days.

The combined car-truck inventory of 330,548 was the highest since July 1, 1983, when there were 338,342 new imported vehicles in stock. The Nov. 1 total was 274,323; the Dec. 1, 1983, total was 305,612.

The supply of import vehicles was the equivalent of 32 days on Dec. 1, 27 days one month earlier and 33 days one year earlier. It was the highest days-supply figure in seven months.

The Japanese cars and their days' supplies were: Honda imports, 11; Toyota, 13; Subaru, 16; Mitsubishi, 17; Mazda, 37; Chrysler captive imports, 52; Isuzu, 56 days, and Chevrolet, 126 days.

The supply of the Chrysler imports broke down this way: Dodge Colt, 44; Plymouth Colt, 47; Dodge Vista, 57; Plymouth Vista, 61; Dodge Conquest, 117, and Plymouth Conquest, 133.

The German makes and their days' supplies: Mercedes-Benz, 8; Porsche, 60; Volkswagen imports, 69; Audi, 73, and BMW, 80.

The days-supplies of the makes from other European countries: Jaguar, 16; Saab, 28; Peugeot, 38; Volvo, 39; Maserati, 40; Alfa Romeo, 66; Renault, 169, and International Automobile Importers, an estimated 588-day supply.

The Japanese trucks and their days' supplies: Mitsubishi, 26; Toyota, 32; Mazda, 32; Nissan, 45; Chrysler, 70, and Isuzu, 77.

Parts-making regulation may curb gray market

NHTSA plans to implement theft law

Continued from Page 28

transmission, auto makers would then be required to mark a certain number of components in each zone, presumably based on theft statistics or replacement cost criteria. This proposition met with generally favorable response from the manufacturers.

One area where a consensus could not be reached was whether factory-replacement parts, or those manufactured by aftermarket companies, should be required to carry the vehicle's VIN.

Although insurers and law enforcement spokesmen agreed that a good deal of record keeping and logistical problems would result, allowing an exemption for replacement parts would provide an alibi to thieves who could argue that their stolen parts were actually replacement products.

In determining which car lines were to be designated as high-theft vehicles, most manufacturers seemed to agree that the FBI's National Crime Information Center's data appeared to be the most complete and could be easily referenced by law enforcement personnel.

Resolution of the gray-market issue was closely tied to the question of whether NHTSA should limit parts-marking authority to original manufacturers only, whether their licensed franchise dealers should be able to mark parts, or whether the technology should be available to all, including the aftermarket industry and the importer-modifiers.

Although law enforcement, insurance and auto maker representatives wanted to keep the marking process as tightly controlled as possible—preferably in the factory—the auto makers were caught in a bind between a desire to control the parts marking themselves and the difficulty of marking replacement parts, should NHTSA require this.

Insurers and law enforcement spokesmen supported the need to keep the numbering technology limited, for fear thieves would gain access to the process and begin numbering stolen parts. But neither the insurers nor the law enforcement representatives wanted to see replacement parts escape a marking requirement, because thieves could claim stolen parts were replacement items.

If the manufacturers are to see the vehicle theft law used as a foil to the gray market, this issue will almost certainly have to be resolved in favor of the manufacturer. That is, the numbering technology would have to be tightly controlled by the original manufacturers and replacement parts would have to come only from the factory, or not be marked at all.

If replacement parts can be marked independently of the factory, NHTSA will have a hard time denying this practice to the modifier-importers.

The law bars the import of vehicles that have not been numbered prior to U.S. entry. However, EPA has allowed the import of non-conforming vehicles under a bond from the U.S. Customs Service, which is refunded once a vehicle is certified.

Former NHTSA administrator Raymond Peck and Ben Jackson, executive director of the compliance association, reasoned that NHTSA could also allow the import of vehicles under bond until they are certified to be in compliance with the theft standard.

25 with Olds

TROY, Mo.—Wally Anderson, president of Troy Motors, Inc., here, has received a 25-year-dealer award from Oldsmobile.

BMW recalls 318i models for heater defect

MONTVALE, N.J.—BMW of North America, Inc., is recalling 5,245 1984 318i models built between January and May of 1983 to inspect for a possible electronic heater control defect.

The company said that it is possible for a control valve to bind, causing excessive current to flow through the wiring to the valve. Smoke and/or smoldering in the instrument panel near the left side of the transmission tunnel may result.

This could occur only when the rotary temperature control knob is at or within a 20-degree rotational angle of the full cold position, the company said.

Owners of the affected 318i models are asked to contact their dealers or any of BMW's regional customer relations offices to arrange repairs.

Year's tally of 7.8 million is best since 1979

Car output soars at year-end

By Louise Kertesz
Detroit Reporter

Domestic auto makers built more cars in two of the last work weeks of 1984 than in any other weeks of the year.

That final sprint brought the estimated calendar-year total to 7,830,090, the best in five years.

Preliminary figures also point to the best December in 17 years and the best fourth quarter in six years.

With no Saturday overtime scheduled because of the holidays, last week's targeted output of 172,889 units was down 9.0 percent from the previous week's record high for the year of 189,998, which topped the previous high set during the week ended Dec. 1 by almost 7,000 units.

Last week's build was 10.58 percent higher than the year-ago week's 154,589.

The estimated 1984 build, up 10.9 percent from last year's 7,112,352, is the highest since 1979's 8,418,369.

Estimated December production of 727,472 cars is up 18.47 percent over the year-ago month's 614,038 and the best December production since 1967, when output for the month reached 790,694.

Fourth quarter production of 2,111,046, according to preliminary figures, is up 4.70 from 1983's 2,016,273 and is the best for the period since 1978, when 2,415,441 cars were completed.

Showing production gains this year (estimated totals) over last year are: American Honda, 136,831, up 147.27 percent from 55,337, as full production of Accords at Marysville, O., was reached in 1984; Chrysler Corp., 1,246,285, up 37.93 percent from 903,553, and General Motors, 4,398,001, up 9.01 percent from last year's 4,034,629.

Preliminary figures indicate calendar-year production declining or holding steady at: Volkswagen of America, 74,861 in 1984, down 23.77 percent from last year's 98,207; American Motors, 191,972, down 4.20 percent from 200,381, and Ford Motor Co., 1,782,140, down 2.09 percent from 1,820,245 in 1983.

Last week's estimated production was shared as follows: GM, 56.84 percent; Ford, 22.88 percent; Chrysler, 14.52 percent; AMC, 2.78 percent; Honda, 1.82 percent, and VWoA, 1.16 percent.

Friday, Dec. 21, was the final work day of the year at U.S. assembly plants, which will be closed for two weeks for the holidays.

Production is scheduled to resume on Jan. 2, 1985.

GM Saturn car likely to need brand-new plant

DETROIT.—General Motor's Saturn Project, its highly publicized small-car program incorporating a variety of low-cost manufacturing techniques, will likely require a brand-new plant site, according to GM Chairman Roger B. Smith.

"We wouldn't put it in a Lake Orion or a Wentzville (GM's two newest assembly plants)," Smith said at the company's year-end Christmas fete. "And the kinds of new techniques it will incorporate make it difficult to put in an old facility."

Commenting on the projected cost of the facility, Smith indicated it could well become the most expensive new plant in GM's history.

Timing of the project is still uncertain, although GM recently began testing Saturn prototypes, and Smith said he was anticipating his first ride in a Saturn "mule" later this month. GM insiders point to a 1988-1989 time frame as the current target.

Chrysler Financial files to borrow $1 billion

DETROIT—Chrysler Financial Corp. has filed with the Securities and Exchange Commission a shelf registration statement covering up to $1 billion in debt securities.

The securities may be offered from time to time at amounts and prices to be determined at the time of offering. Net proceeds will be added to the general funds of Chrysler Corp.'s finance subsidiary.

Truck output in U.S. best in six years

Domestic truck production for the calendar year, the month of December and the fourth quarter is the best in six years, preliminary figures show.

Estimated 1984 production of 3,105,000 trucks is up 29.35 percent from last year's 2,400,429 and the highest since 1978's 3,676,747.

December's targeted output of 275,397 trucks, up 33.12 percent from last December's 206,872, is also the best since December, 1978, when 276,248 trucks were built.

And preliminary figures indicate that fourth-quarter production of 839,865 trucks is also the best in six years. Output for the period in 1978 was 980,442.

Last week's slated truck output of 66,772 dipped 3.52 percent from the previous week's 69,207, since no Saturday overtime was scheduled for Dec. 22 because of the holiday.

Along with domestic auto plants, truck facilities will be closed for two weeks for the holidays, with production scheduled to resume Jan. 2, 1985.

Canadian cars at 6-year high; trucks hit peak

Canadian auto makers posted their best December, their best fourth quarter and their best calendar-year production in six years, preliminary figures indicated.

And by completing 802,228 trucks in 1984, Canadian builders achieved a record production year. They also had their best December and best fourth quarter ever.

December's total of 79,998 cars assembled, down 15.36 percent from November's 94,519, was the highest December output since the 85,377 produced in 1978.

Fourth-quarter production of 256,102 cars was the best for the period since 1978, when 292,183 cars were built.

Calendar-year production of 1,029,250 autos, up 5.88 percent from last year's 968,774, was the highest since 1978 when 1,131,050 cars were assembled.

Last week's slated output of 19,954 cars was down a bit (2.78 percent) from the previous week's 20,525 and was off 14.02 percent from the year-ago week's 23,209.

The 802,228-unit calendar year record for Canadian trucks was 43.03 percent better than last year's 560,864.

The record December output of 70,300 trucks was down 6.47 percent from November's 75,162 and the record fourth-quarter production of 210,947 was only the third-highest quarter this year.

Last week's targeted output of 16,720 trucks was down 3.43 percent from the previous week's 17,313 but was 17.25 percent higher than the year-ago week's 14,260.

Calendar year production at Chrysler's Windsor (Ont.) plant approached the 235,000 mark in the final working days of 1984.

Last week's estimated production of 2,111 Plymouth Voyagers, 2,328 Dodge Caravans and 491 Mini Ram Vans brought the T-115 total for the year to 234,854.

Relocating

SPRINGFIELD, Mass.—Balise Chevrolet-Honda-BMW-Peugeot is relocating its Honda dealership to West Springfield. Balise Oldsmobile will occupy the old Honda facility.

60th year – $40 per year, $1.00 per copy

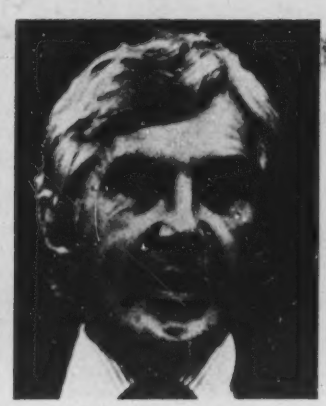
Top Ten news-makers of 1984

Owen Bieber
President, UAW

He successfully guided the UAW to new contracts in his first round of negotiations since taking the top job at the auto union.

Malcolm Bricklin
Chairman, IAI, Inc.

Like Molly Brown, he's unsinkable. He launched a program to import the bargain-priced Yugo in the wake of sports-car difficulties.



John Z. DeLorean
Former auto manufacturer

Not since the Perils of Pauline has anyone evaded disaster the way DeLorean did in his drug trial. The serial of his troubles continues.

Elizabeth H. Dole
Secretary of Transportation

She issued the latest "solution" to 15 years of passive-restraint niff-nawing, complete with a kicker that could nullify the whole thing.

Lee A. Iacoccca
Chairman, Chrysler Corp.

He basked in adulation as the savior of Chrysler Corp. and wrote a best-seller autobiography. What's next: President? Pope?

H. Ross Perot
Chairman, Electronic Data Systems

After a merger with General Motors, his firm forms the nucleus of what arguably could become the most important part of GM.

Peter W. Schutz
Chairman, Porsche AG

In master-minding the aborted decision to overhaul Porsche distribution in the U.S., he single-handedly imperiled the entire franchise systrem.

Roger B. Smith
Chairman, General Motors

He is presiding over one of the most far-reaching overhauls of the GM monolith. There is no part of GM that is beyond his shadow.

Robert White
Vice president, UAW

He led the UAW Canadian region to march to the beat of a distant drummer. Quiet revolution may have noisy aftermath.

Kenichi Yamamoto
President, Mazda Motor Corp.

He rose from rotary-engine godfather to the top at Mazda, the only foreign firm to plan a factory in Michigan, the U.S. industry's home.

Story of the Year: Big Three's record profits

By John K. Teahen Jr.
Managing Editor

It's been said that the business of business is profit. And profits – record profits – earned the Story of the Year designation for 1984 in the 32nd annual AUTOMOTIVE NEWS editorial staff poll.

Each of the Big Three marched to alltime highs in net income with the industry total topping $10 billion.

Second place went to the reorganization at General Motors, and the third-place choice was the expansion of car-building activities in the U.S. by Japanese makers. Mazda, Nissan and Honda were involved.

The substantial upturn in new-car and new-truck sales captured fourth place in the balloting, while fifth place was shared by GM's purchase of Electronic Data Systems and the Transportation Department's mandate of a phase-in of passive restraints beginning with the 1987 models.

The Story of the Year – record profits – began on the first day of 1984 and continued throughout the year. Virtually every day brought new smiles to the faces of the moguls who count the money, and that includes everyone who has a decision-making role.

The full-year total won't be available for several weeks, but it's a sure bet that the four major domestic auto manufacturers topped $10 billion in profits for 1984.

There were alltime highs for GM, Ford Motor Co. and Chrysler Corp., and American Motors also wound up in the black although it did not set a record.

AMC made a profit in each quarter of the year, an especially heartening happenstance. Prior to the fourth quarter of 1983, the company had written its financial reports in red ink for 14 consecutive quarters.

Ford and Chrysler set records for dollar sales and profits in each of the first three quarters of 1984. GM did likewise in the first and second quarters, but six days of mid-September strikes at key assembly plants kept the corporation from a third-quarter profit peak, although dollar sales were an alltime high.

The first nine months of the year brought records in sales and net income for each of the three makers.

For the full year, it appears that GM will show a profit of nearly $5 billion. It looks like $2.9 billion for Ford and $2.4 billion for Chrysler. That's more than $10 billion, far above the previous record of $6.15 billion for the industry in 1983.

The magnitude of the industry's accomplishment can be appreciated by looking back just four years. In 1980, the four makers suffered a combined net loss of $4.2 billion. Even GM lost money that year.

GM's massive reorganization, the second-place choice, was announced last January and it is still going on. One does not restructure a behemoth like General Motors in a single day, or a single month, or even a single year.

GM said the reorganization is designed to bring greater efficiency in engineering, manufacturing and product development. Greater efficiency means lower costs and lower costs mean higher profits. And that's what it's all about.

The new setup established what GM called "two integrated car groups which will function as self-contained business units."

Such factory nomenclature doesn't always find its way into real-world usage, thus the two entities have become known as "supergroups." One is the Chevrolet-Pontiac-GM of Canada (CPC) Group; the other is the Buick-Oldsmobile-Cadillac (BOC) Group.

CPC is often referred to the small-car group; BOC as the big-car group. GM studiously avoids those designations, however.

The new setup has brought much consolidation of activities and elimination of overlapping functions. Some revered names have vanished. There's no longer a Fisher Body Division or a GM Assembly Division; their activities have been integrated into the supergroups.

Even a year later, the role of the car divisions in the new structure is not entirely clear. Obviously, they've lost some of their clout. But they're still headed by corporate vice presidents and they are still important cogs in the GM machine.

The reorganization delighted

'Big brother at work,' they say

Detroit dealers charge FTC with harassment

By Richard Johnson
Detroit Reporter

A spokesman for embattled Detroit-area auto dealers has accused the FTC of "government by harassment" following the federal agency's charge that local retailers illegally conspired to close on Saturdays and most week nights and that some dealers agreed not to advertise prices.

Daniel Hayes, executive vice president of the Detroit Auto Dealers Assn., said the commission's official complaint is an example of "Big Brother at work."

In its complaint, the FTC named 105 auto dealers and 115 individuals in the Detroit area, the Detroit Auto Dealers Assn. and 18 groups of dealers selling particular lines.

The action resulted from an investigation that commenced last spring. Sixty-seven Detroit-area dealers received subpenas in April from the FTC's Bureau of Competition seeking information dating back to 1965 regarding business hours, leasing and sales policies, tradein allowances and labor rates charged by dealers for service work.

Last summer, the Bureau of Competition quizzed a number of local dealers during a series of non-public hearings in Detroit.

"It is a typical bureaucracy," said Hayes. "They sent the staff out here in May, June and July, and now the commission is not going to tell the staff people they are full of beans."

According to the complaint, dealers violated antitrust laws by reducing competition. The FTC alleges that consumers are damaged because of limits placed on their ability to do comparison shopping. The agency also contends that the ability of new dealerships to compete for a larger market share is diminished by the hours policy.

But Hayes claimed that car prices in the Detroit area are lower than elsewhere in the country because of fewer hours.

"Outside studies show that this is the lowest-cost city of any size in the U.S. in which to buy a car," he said. "Shorter hours mean lower prices and that is the best thing we can do for consumers."

Hayes said low prices in Detroit are not related to the proximity of auto maker assembly operations. He said transportation costs for dealers were equalized several years ago.

Hayes also disputed the contention that Detroit-area car buyers are less able to shop around because of limited hours.

"The average consumer buys a car every seven years, or so," he said. "We are open from 8:30 or 9 o'clock in the morning until six at night and open on Monday and Thursday nights until 9 o'clock. In that period of time over a seven-year span, there is adequate time in which to buy a car."

He also said that dealers generally make themselves available at odd hours when customers have are faced with a scheduling hardship.

But while fewer hours result in lower prices and little inconvenience for consumers, Hayes said Detroit dealers have never conspired to set operating hours in the region.

"I have been to every DADA meeting for the last 10 years with the exception of a few last year, and I can tell you that we never once recommended hours for dealerships," he said.

Hayes claimed the Detroit business hours policy did not result from collusion, but simply evolved over the years.

"Back in the '60s, employes were pressing for something that just about everyone else in our fair town has – nice weekends," he said. "It has been an evolutionary thing going on for 20 years."

The FTC complaint also alleges that dealers who have not complied with the local hours policy have been subjected to threats and property damage.

"I think harassment is reprehensible," said Hayes. "But, fortunately, it has not happened very often over the years."

Hayes said he does not believe that dealers have engaged in an illegal agreement not to advertise prices. The FTC complaint charges the Chevrolet, Chrysler-Plymouth and Cadillac dealer associations, dealers and associated individuals with conspiring to restrict advertising or publishing of prices and prohibiting dealers from using classified ads in local daily papers.

The FTC complaint initiates a legal procedure which will result in the charges being considered by an administrative law judge. If the judge rules that antitrust laws were violated, the FTC may seek certain specified relief, such as ordering dealers to stop illegal activity; forcing a change in association bylaws to prohibit future conspiracies; ordering records kept of association meetings, or dissolution of dealer associations.

Dealers could be ordered to open for additional hours during a period of up to one year and could be ordered to notify the public of new hours in advertising messages.

But Hayes said the FTC will never order Detroit-area dealers to open on Saturdays.

"They'll never get that far," he said. "Our good legal counsael will beat them. We think the FTC is trying to tell small businessmen how to run their businesses. In our opinion, the government has no business in this matter. This is primarily a labor situation and not even a proper function of the FTC."

Soviets dicker with Japan for 'turn-key' plants

TOKYO. – The Soviet Union is exploring the possibility of acquiring "turn-key" plants from Japan, according to the Japan Economic Journal.

According to the story, the Soviets want to introduce Japanese management techniques in new plants to be built along the Bam Railway, better known as the Second Siberian Railway, which was completed last September.

Should a Japanese firm supply a "turn-key" plant, it would provide plant machinery, other hardware, training of engineers and operating know-how.

While this ensures smooth operation of imported plants, it leads to higher operating costs, the paper said.

It added that the Soviets apparently want to adopt the Japanese management system to improve manufacturing productivity under the 12th five-year economic development plan. which begins in 1986.

British, French and West German firms are already participating in the industrial development along the Bam Railway, the paper said, adding that speculation holds that the Soviets are shoppiong in Japan to spur competition among Japan and Western nations in the development of the area.

Mayer is named news editor of Automotive News

Mary Beth Mayer has been named to fill the position of news editor at Automotive News, effective immediately.

Mayer joined Automotive News in 1983 as a staff writer and has also filled assignments in copy-reading and makeup. She came to this newspaper from another Crain Communications publication, AutoWeek.

Mary Beth Mayer

She is a 1982 graduate of Marquette University.

Taiwan considers concessions for Ford Lio Ho

TAIPEI, Taiwan. – The Investment Commission of Taiwan's Ministry of Economic Affairs has tentatively agreed to eight of 20 special requests for concessions made by Ford Lio Ho Motor Co. in connection with its expansion plans, according to the China Economic News Service.

The commission plans to study the other 12 requests. Ford Lio Ho is owned 70 percent by Ford Motor Co. and 30 percent by local interests.

The expansion plan calls for a $35 million investment to enable the company to increase annual production at its Chung Li plant from 40,000 to 90,000 cars by May, 1986. Thirty thousand of the cars will be exported. The export cars will be based on the Ford Laser, and it will be Taiwan's first auto export program.

The eight requests receiving tentative approval will give Ford Lio Ho certain allowances. For instance, for four years the company will not have to pay taxes for additional business income, no duty will be imposed on machinery imported for the expansion and vehicles produced for export will be exempt from rules governing the local-content rate.

Brazilian natives

Extra choices in Brazil

At the recent Brazil XIII Auto Salon, some of the more interesting vehicles were displayed by small, independent producers, with models called "personalized" cars in Brazil. They range from slight modifications to standard production cars to completly new designs, using locally available components. Above is a Miura Targa, a T-top powered by a Volkswagen engine and priced at about $15,000.

Flipped out in Brazil

Hofstetter, a maker of personalized cars in Brazil, showed this gull-winged sportster at the Brazil XIII Auto Salon. It is powered by a turbocharged Volkswagen engine, and a top speed of 137 MPH is claimed. Prices start at $24,000.

Sporty coupe with GM muscles

This Farus Beta coupe was among personalized cars displayed at Brazil XIII Auto Salon. It is powered by a General Motors Monza 1.8-liter engine in either gasoline or alcohol version.

An off-roader from Gurgel

Gurgel, a specialist maker in Brazil, exhibited this off-road Carajas X-15 at Brazil XIII Auto Salon. The water-cooled engine, mounted in front, is available in gasoline, diesel or alcohol versions.

IVECO'S 'alternative' for Class 6 users

The IVECO Z-340T, powered by a 140-HP turbodiesel, is called an alternative to Class 6 trucks for wholesale/retail distributors. The vehicle has a GVW rating of 18,900 pounds, and IVECO Trucks of North America, Inc., said that fully loaded with a 10,000-pound payload, the Z-340T achieves 12 to 15 MPG.

Class 5 TurboDiesel introduced by IVECO

Jack Walsh
Truck Editor

TARPON SPRINGS, Fla.—IVECO Trucks of North America, Inc., has introduced a new Class 5 model, the Z-340T, which the company calls "a fuel-efficient, state-of-the-art alternative" to heavier Class 6 and 7 trucks.

The Z-340T is the heaviest unit in IVECO's Z-Range line and James R. Bostic, ITONA president, said the newcomer reflects "our commitment to quality and lower cost of ownership."

Powered by IVECO's 140-HP six-cylinder TurboDiesel, the Z-340T has a wheelbase of 149.6 inches, a tilt cab and is rated at 18,900 pounds GVW with a payload/body allowance of 12,044 pounds.

Bostic said wholesale/retail businesses, which represent the best prospects for the new vehicle, can save up to 20 percent on vehicle-operating costs by using the Z-340T.

He estimated that there are 3 to 4 million prospects in what he calls the "phantom-class" market, firms which he said have driving records of about 75,000 miles a year and could use trucks with a 10,000-to-20,000-pound GVW capability.

Bostic noted that U.S. truck makers "have moved away from the middle groups (Classes 3, 4 and 5) in the last 15 years, and this market hasn't had vehicles to meet the needs from both a cost and fuel-efficiency standpoint."

He added that "IVECO has the products to compete in these

Canadian maker of fire trucks gets U.S. orders

MONTREAL.—Pierreville Fire Trucks, Ltd., is expanding its business into the U.S. and reported it has some $13 million in back orders.

Helped by the low Canadian dollar, the company said it has been competing successfully against several U.S. fire-truck builders.

Prior to this year, the company said, it had sold about a dozen trucks in the U.S. Currently, the company said it has more than 40 vehicles on order with prices up to $350,000.

Pierreville trucks are built on a custom basis and buyers can specify chasis and drivetrain components, as well as ladder and pumping equipment.

Chassis and drivetrains are supplied by North American manufacturers.

Of note, the trucks feature a new self-leveling ladder design available up to 110 feet in length.

truck personnel

Mack's Rossetti, Walker, Cantrell get promotions

Joseph P. Rossetti, previously senior vice president—sales, has been elected executive vice president—marketing for Mack Trucks, Inc. He succeeds **Garner L. Davis**, who is retiring after 39 years with the company.

William E. Walker, senior vice president—human resources, becomes executive vice president—human resources.

Paul D. Cantrell, formerly vice president—international operations, has been named executive vice president—international operations.

J. P. Rossetti

P. D. Cantrell

Booth, Gulda, Krivan appointed Rockwell VPs

Halden L. Booth has been named vice president of field sales and service parts for Rockwell International Corp.'s On-Highway Products Operations. He had been vice president of North American field sales and marketing.

Edward J. Gulda has been appointed vice president of

10-month, October truck tallies shatter 1978 marks

Truck registrations hit new highs

Ten-month registrations of new trucks of all types in the U.S. were the highest in industry history, topping the previous mark set in 1978 by 56,018 units.

Through October, 3,344,769 units were registered, according to R. L. Polk & Co. statistics, an increase of 1.7 percent over the 10-month total of 3,288,751 units registered six years ago and 54.6 percent greater than the 2,391,481 tallies recorded in the same period last year.

October tallies also set a record for the month. The total was 349,807 units, 14.7 percent higher than the 304,904 registered in the same month in 1978 and an increase of 32.3 percent over last October's 264,509.

Registrations through October were up sharply over last year in the three major market segments and all weight groups. Both the light and heavy groups topped the 10-month count set six years ago, but only the light group reached an alltime high.

In the January-October period, 3,136,652 light trucks were registered, an increase of 39.5 percent over the year-ago 2,247,991 and 4.7 percent greater than the previous high of 2,996,261 established six years ago.

Medium trucks through October were up 20.1 percent to 47,693 units, compared with 36,695 last year. But they were down 64.6 percent from the 134,594 units registered in the like period in 1978.

Heavy-truck registrations for the 10 months were 54.6 percent higher than a year ago, 160,424 versus 103,795, and 1.6 percent above the 1978 count of 157,896. However, the 10-month total trails the 1979 alltime high of 181,053 by 11.4 percent.

Group 1 registrations through October were up 41.6 percent over last year, from 1,273,313 units in 1983 to 1,802,551. They were 93.2 percent higher than the 933,000 tallied six years ago.

HD registrations up 54.6 pct. for 10-month period

Registrations of new heavy trucks in the U.S. during the first 10 months of 1984 totaled 160,424 units, according to R.L. Polk & Co. statistics, an increase of 54.6 percent over the year-ago 103,795 units.

In October, 18,676 units were registered, a gain of 52.9 percent over the 12,215 tallied in the same month last year.

Registrations of Group 7 trucks through the first 10 months totaled 54,986, up 35.1 percent over the 40,710 in the year-earlier period.

The Group 8 count through September was 105,438, an increase of 67.1 percent over last year's 63,085.

International continued to lead Ford in heavy-truck registrations with a 10-month total of 36,653 units, compared with 30,914 for runnerup Ford.

In October, International increased its lead over Ford by 1,504 units.

International was also No. 1 in Group 8 registrations with 24,073 tallies through October, while Ford was the Group 7 leader with 21,173 units.

Group 2 tallies of 1,303,203 this year were 36 percent higher than last year's 958,154, but 35.5 percent behind the 2,021,950 units registered in 1978.

The Group 3 total of 30,898 units this year was 87 percent higher than last year's 16,524 units and 25.1 percent behind the 41,241 units tallied in 1978. However, during October this year, only 2,264 units were registered, compared with 2,561 units last October, a decline of 11.6 percent.

The popularity of compact trucks is responsible for the big increase in Group 1 registrations over the 1978 total and the sharp decline in Group 2 tallies.

Group 4 tallies through October totaled 596 units, up from last year's 277 and 95.1 percent behind the 12,062 units registered in 1978.

The Group 5 count of 3,290 this year led last year's 615 tallies and 1978's 2,476 tallies.

The switch from gasoline to diesel power has resulted in a shift in registrations from Group 6 to Group 7 since 1978.

The Group 6 count of 43,807 this year compares with 38,803 last year, an increase of 12.9 percent, and 120,056 in 1978, a decline of 64.6 percent.

Through October, the Group 7 total of 54,986 represents a gain of 35.1 percent over the 40,710 registered last year and an increase of 74.9 percent over the 31,445 registered in 1978.

The 10-month total of 105,438 Group 8 trucks was 67.1 percent higher than the 103,795 heavies registered in the like period a year ago, but 16.6 percent below the 1978 total of 126,451.

Chevy will meet new EPA rules soon after Jan. 1

Chevrolet will be able to meet 1985 EPA emission standards for trucks over 8,500 pounds GVW, according to a top engineering executive, but will be allowed to supply the RV industry with an alternative engine while RV makers modify their vehicles to accept the new power plants.

RV builders have been granted a six-month exemption from the new emissions standards because Chevrolet motor-home chassis will feature a new heat-shielded dual-exhaust system and other changes that will require modifications to RV bodies.

Chevrolet will supply RV builders with 1985 California-certified engines, which are adaptable to current motor homes.

Chevrolet supplies more than 90 percent of all Class A motor-home chassis, commonly powered by its 454-cubic-inch gasoline engine.

Chevrolet will be able to deliver emissions-certified vehicles over 8,500 pounds GVW shortly after the Jan. 1 deadline, according to Kenneth Hanson, chief engineer, powertrain operations, Chevrolet-Pontiac-Canada Group.

Until the new engines are ready, Chevrolet will lose production of these vehicles, he said.

"We think it will be only a couple of weeks after the first of the year," he added. "The exhaust

Makers assemble 8,315,780 cars

'84 model-run output up 44 pct.

By Louise Kertesz
Detroit Reporter

Auto production during the 1984 model run was the highest in five years, surging 44.15 percent ahead of the 1983 model run.

Car makers produced 8,315,780 units in the 1984 model run, up from 5,768,893 for 1983, which was the second lowest model-year output since 1961.

The 1984 total, the best since 1979's 9,526,024, fell 1.6 million short of 1973's alltime high of 9,915,802.

During the 1984 model run, all the domestic makers recorded increases in production.

American Honda's full production of Accords in the U.S. – they were launched in November, 1983 – gave it the year's greatest increase.

Honda's total production of 117,200 was more than triple its 1983 output of 33,508.

Chrysler Corp. posted an increase of 59.40 percent during the model run, to 1,176,144 cars, up from 1983's 737,835.

The company introduced two new models in 1984, the Chrysler Laser and the Dodge Daytona, and moved production of the Plymouth Gran Fury, Chrysler Fifth Avenue and Dodge Diplomat from Canada to the U.S.

Ford Motor Co., adding the Ford Tempo and Mercury Topaz to its lines, recorded an increase of 45.79 percent during the model year. Ford began building Tempoo and Topaz in the spring of 1983, but all production was counted in the 1984 model run.

Ford Motor's output was 1,813,523 cars, versus 1,243,887 in 1983.

Volkswagen of America increased its output by 42.01 percent during the model run, producing 104,301 cars, versus 73,446 in 1983.

General Motors' production of 4,895,988 cars during the model run was up 38.40 percent from 1983's 3,511,491.

The Pontiac Fiero and the redesigned Chevrolet Corvette joined GM's lines in 1984 and the maker added U.S. production of the Pontiac Parisienne.

The Chevrolet Cavalier recorded the highest production of any 1984 nameplate (462,612), representing 5.49 percent of total U.S. output

GM introduced its front-wheel-drive C-cars last April as 1985 models and did not count their totals in the 1984 model run.

American Motors, adding the Renault Encore, produced 208,624 cars in the model run, increasing its output 23.65 percent over 1983's 168,726.

Reagan budget proposal perils loans for exporters

By Jake Kelderman
Washington Reporter

WASHINGTON. – U.S. makers of heavy-duty equipment, off-road vehicles, construction equipment, trucks, trailers and locomotives could see as much as 10 percent or more of their export business go by the wayside if Congress agrees with a proposal to do away with any new loans for the Export-Import Bank.

This proposal by the Reagan Administration is part of its efforts to reduce the federal budget deficit.

The Export-Import Bank is the major source of loans, insurance and loan guarantees for exports of this type of equipment.

Last year, for example, it authorized $327,016,000 in loans, insurance and loan guarantees for transportation equipment exports, $132,301,000 in loans, insurance and guarantees for construction equipment and $71,189,000 for railroad locomotives.

According to a spokesperson for the bank, such items as auto and truck parts and accesories, buses, diesel engines, firefighting vehicles and passenger cars and taxis are included in the transportation category.

Within the construction equipment category are included such items as cranes and hoists, loaders, graders, earthmovers, scrapers and track-type tractors, she said.

The total amount the Export-Import Bank contracted for in transportation and construction equipment last year was $5,305,060,000, according to the bank, but not all of that would be lost to the producers of this equipment under the Reagan budget proposal, the spokesperson said.

"Only the loan part of our program would be cut," she said, "and 90 percent of our operations are typically in the insurance and loan guarantee areas which would not be cut."

U.S. vehicle and equipment makers are extremely reluctant to talk about export sales in which the Export-Import Bank is used.

General Motors' Electromotive Division, for example, makes extensive use of the Export-Import Bank to sell its railroad locomotives, but a spokesman there said the division would have no comment for competitive reasons. Ford said it did virtually no business with the Export-Import Bank last year.

Should Congress go along with the Reagan Administration proposal for the Export-Import Bank loan cutoff, the companies utilizing its financial assistance could expect to lose, using 1983 bank figures, approximately $32.7 million in transportation-related export sales, $13.2 million in construction equipment sales and approximately $7.1 million in railroad locomotive sales in fiscal 1985.

The heavy-duty, off-road, and construction equipment industries have only this year begun to recover from the 1980-1982 recession.

Mazda offers scholarships for study in Japan

LOS ANGELES. – Mazda Motor Corp. has announced a scholarship program to enable 10 American high school and college students to study in Japan in the summer of 1985.

Seven fully paid two-month scholarships are open to all U.S. students; three have been reserved for Mazda dealers' children and employes.

Applicants will be judged on the basis of academic record, extracurricular activities, work experience, teacher recommendations and an essay on why they wish to study in Japan.

Students selected for the program will stay with Japanese host families and experience Japanese life and culture first-hand.

Application forms can be obtained by calling Youth For Understanding, the administering organization, toll-free at 800-424-3691 or by writing to: Youth For Understanding, Scholarship Administration, 3501 Newark St. N.W., Washington, DC 20016.

Applications must be requested by Dec. 31 and returned by Jan. 25, 1985. Winners will be announced March 1, 1985.

George Salomon, left, and Carl Curcio, of Bright Bay Lincoln-Mercruy, Inc., Bay Shore, N.Y., receive a plaque commemorating the dealership's 25th anniversary.

Nissan, Premier join to produce cars in India

TOKYO. – The government of India has approved a plan by Nissan Motor Co., Ltd., and Premier Automobiles, Ltd., the second-largest passenger-car maker in India, for technological cooperation in the production of the Fiat 124.

According to the contract between the two firms, in the spring of 1985 Nissan will begin to supply a 1,200-cc engine and transmission parts for the car to be produced by Premier.

Nissan will also send technical staff to assist Premier in developing capabilities for local production.

Nissan will supply engine and transmission parts for 15,000 cars per year, increasing to 30,000 after two or three years.

Also in cooperation with Premier, Nissan plans to begin local production of the Sunny in about five years, beginning at a rate of 10,000 units per year and increasing to 50,000 units per year.

Nissan is also promoting a cooperative venture for local production and sales of the Atlas, a small truck, together with Allwyn Nissan, Ltd., of Hyderabad, India. Production is scheduled to begin in the spring of 1985.

GM's McDonald to speak at U.S.-Japan conference

ANN ARBOR, Mich. – General Motors President F. James McDonald will be featurered speaker at the Fifth Annual U.S.-Japan Automotive Industry Conference here March 5 and 6.

With the theme, "Entrepreneurship in a Mature Industry," the conference also will include Rosabeth Moss Kanter, author of *The Change Masters: Innovation and Productivity in the American* Corporation; Donald Ephlin, UAW vice president; Edmund Carpenter, executive vice president of ITT, and a representative of the Japanese automotive industry.

Renix aims at diversification

Renault-Allied firm plans to expand its customer base

By Richard Feast
European Editor

Renix, the automotive electronics company formed in the late 1970s by Renault of France and Bendix Corp. of the U.S., is on the way to becoming a FF 1 billion a year operation before 1988. At current exchange rates that comes to $105 million in annual sales.

Now about half way to that goal, Renix is profitable and working at diversifying its product and client base. Renix chairman Richard A. Tillie, however, acknowledges that 1984-85 results will suffer somewhat because French auto maker Renault, its main customer for automotive electronic ignition and injection systems, is struggling.

While Renault is starting to make a comeback, Renix's biggest lift is expected to come from North America. Within two years, all vehicles (including Jeeps) turned out by American Motors, Renault's U.S. affiliate, will have fuel-injection systems, and 70 percent will come from Renix, according to sales and marketing director Cyrille Emelianoff.

The drive to find new kinds of customers is aimed at giving Renix stability. At present it sells 70 percent of its output to Renault, 20 percent to AMC and 10 percent to Volvo in Sweden and Holland. By the end of the decade Renix expects the figures to be 30 percent each to Renault and AMC, and 40 percent spread among other customers.

Renix currently is designing a complete engine-management system for Volvo. Future projects are expected to include a Peugeot version of that French auto company's joint-project (with Fiat) 1-liter engine, and electronic controls for a four-speed automatic transmission on which Renault and West Germany auto maker Volkswagen are collaborating.

Richard Tillie: Reaching for $100 million in annual sales.

The average age of Renix workers is 29. Many are research engineers.

Within a few months, DBA, a Bendix company, is expected to unveil a truck anti-lock braking system using Renix electronics. Renix also is working on a multiplex wiring system for buses, and is in the early stages of developing electronics for suspension control.

Company officials also believe there is potential for developing products outside the transportation field, including medical equipment and any market that might use electronic voice-recognition systems. This is long-term, however, and for the next several years Renix will be closely tied to the auto industry.

Renix was formed in November 1978 with Renault owning 51 percent and Bendix, now part of Allied Corp., 49 percent. Today it's capitalized at FF 50 million ($5.3 million) and managed by a nine-member team headed by Tillie, who's been with Renault 37 years. The supervisory board has four members each from Renault and Allied, headed by Tillie and John H. Campbell, a Bendix group vice president.

Renix is centered around Toulouse, an area Tillie likens to the U.S. West Coast's Silicon Valley, "but much smaller." Toulouse also is the home of prestige high-tech companies such as Aerospatiale, Thomson-CSF, Matra and Motorola, so Renix is in good company.

Renix's first factory and headquarters opened in the suburb of Mirail in February 1980, and was followed by smaller plants in nearby Boussens (1983) and St. Gaudens, Foix and Pouvourville (1984). To support its growing North American business, Renix opened a 10-person office in Detroit last June. The company's first product was electronic ignition, and it will produce about 1.15 million units in 1984 and an estimated 1.35 million in 1985. Its next product was a control system for automatic transmissions, now running just below 200,000 units annually, mostly exported to AMC since automatics are low-volume in Europe.

Renix also will turn out 60,000 cruise control units in 1984 and 70,000 in 1985. About 100,000 diesel preheaters, a newer product, will be produced in 1985, while the company's so-called "short run" department in 1985 will turn out about 33,000 control units for bus heating and diagnostic systems.

Another main product line, electronic-control boxes for fuel-injection, bowed in 1983; nearly 60,000 were made this year and volume is projected at 145,000 in 1985. Meantime, the company's early emphasis on ignition products is decreasing.

Average age of Renix's 920 employes is 29. Research engineers represent a high percentage of the work force. Quality control is top priority; a red-alert system can bring the entire production operation to a halt within an hour of a problem being positively identified, according to quality director Bernard Deutz d'Arragon. This month Renix was named winner of the Industry and Quality Award by the French Industry Ministry and *L'Usine Nouvelle* magazine.

Renix sales are climbing. The company lost FF 9.0 million on sales of FF 18 million in 1980, and lost FF 2.5 million on sales of FF 76 million in 1981. The turning point was 1982 when sales of FF 210 million yielded a profit of FF2.5 million. In 1983 sales were FF 336 million ($35.7 million at current exchange rates) and profit totaled FF 21.4 million ($2.3 million). Says Tillie: "This covered previous losses, reconstituted capital stock and enabled an employe profit-sharing scheme."

Tillie does not believe 1984 results will be as good as 1983. Renault's heavy losses are putting a squeeze on Renix prices, which makes diversification even more imperative. Renix has a five-year FF 350 million ($37.2 million) investment program under way, which will be about 15 percent of anticipated sales for the period, according to Tillie who says investment in electronics "must be higher than mainstream auto making."

world news briefs

AR wants dealers

Trevor Taylor, sales and marketing director, says Austin Rover wants to reduce its reliance on the U.K. market from 80 percent to 60 percent of total sales volume. A campaign is under way to add dealers on the European mainland in an attempt to boost AR's market share to nearly three percent.

Ceramic start

Renault of France and Norton Corp., Massachusetts, agree to develop a new generation of ceramic engines for cars. The venture, called Ceratech, will be based at Tarbes in southwest France.

Convertibles catch on

The U.K. importer of Czechoslovakian Skodas is offering customers a convertible conversion (see accompanying photos). Done in England, the conversion adds $1,400 to the very competitive price of $4,300 for the Rapid Coupe model.

Peugeot loses less

Peugeot, France's privately held auto company, cut its losses in first-half 1984 to $43 million, about half as much as a year earlier. Group sales climbed seven percent to $4.9 billion.

New paint shop

A $38 million paint facility is put into operation by Volvo Car B.V., Holland, at its Born factory. Besides improving product quality and the work environment, it will enable production to be boosted from a present level of 100,000 units annually to 120,000. Volvo Car builds the 340/360 series, and in 1986 starts producing its replacement which will be sold in the U.S.

Saab spending

Saab Car Div., Sweden, is spending $41 million to raise annual production 25 percent to 150,000 units. The money is being spent over three years. As a group, Saab-Scania AB sales rose 27 percent in the first eight months of 1984 compared to a year earlier, reaching $1.86 billion.

Renault robots

Renault Automation, subsidiary of Renault's industrial group, signs a technical agreement with Toyoda Machine Works Ltd., subsidiary of Japan's Toyota Motor Corp., to produce industrial robots in 1985. Software and most hardware will be supplied by the French company. Toyoda will supply certain mechanical components. The pact gives Renault exclusive marketing and distribution rights in France and nonexclusive marketing rights worldwide.

Seat system

Minebea Co. Ltd., Tokyo, develops a system to measure body pressure distribution, for use in seat design. The computerized unit (CRT, printer, floppy disc, keyboard), using customer software, displays pressure values of up to 320 sensors for seat and back cushion; isobar graph; cross section of isobar graph for contour evaluation; and dynamics of individual sensor pressures over a designated period of time.

GM and Ford to miss 1985 CAFE figure

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Both General Motors and Ford Motor Co. have told NHTSA they anticipate missing the 1985 CAFE standard because the public is buying larger cars with larger engines although both firms make lots of smaller, more-fuel-efficient cars.

Ford's miss is estimated as 1.6 MPG below the 27.5 MPG passenger-car standard (using volume of 1,945,869) and GM projects its failing as 2.4 MPG (using volume of 4,474,000).

Despite the fact that the light-truck fuel-economy standard for 1985 was changed to accommodate its needs, Ford now said it thinks it will reach only 19.1 MPG, 0.4 MPG below the revised standard. GMexpects to exceed the standard by 0.4 MPG.

Addressing its shortfall in passenger-car CAFE, GM said that, as a full-line manufacturer, it has had a "more dramatic shift" in CAFE than a company offering a narrower line of vehicles.

GM also pointed out that it has kept making an investment in more-fuel-efficient vehicles and has even increased capacity in smaller vehicles beyond the number its customers are buying. The company said that some of its competitors have postponed such plans because of the recession or the shift in customer demand.

However, since the public is not buying GM's small cars and since GM has used up all its carryforward credits, it plans to offset its shortfall by using carryback credits from 1986, 1987 and 1988.

While GM is pleased with the "short-term relief" given by Congress in 1980 when it enacted the three-year carryforward and three-year carryback provisions, GM still wants more regulatory leeway from EPA.

The company has said, for example, that the 0.2-MPG adjustment factor for changes in test procedure is not enough. Despite these objections, GM uses in its projections the 0.2 MPG which EPA allows both for test procedure changes and for changes in fuel characteristics. Even so, in its projections, GM has counted the total of 0.4 MPG EPA has so far allowed.

Ford, in order to meet its projected 1.6-MPG shortfall, plans to use what carryforward credits it has and to start using carryback credits.

Ford expects to meet the 1985 light-truck fuel economy standard because it now has some extra carryforward credits since it has recalculated earlier fuel economy taking into account the allowances proposed by EPA for test fuel chanarcteristics.

Due in Europe in '86

New baby Volvo

Volvo will launch an all-new middle-class model next year, being developed under the G-1 code name. It will be the first Volvo with front-wheel drive. Buyers will have the choice of five-spdeed or CVT transmission. Engine size ranges from 1.4 to 2.0 liters. At present, Volvo plans to limit marketing to Europe.

Hyundai nearing decision on sale of cars in U.S.

By Richard Johnson
Detroit Reporter

Officials at Hyundai Motor Corp. are awaiting final word from corporate headquarters in Seoul, Korea, on whether to pursue U.S. marketing plans, but the company's Canadian arm is still hoping for a 1985 launch in this country.

Following its huge sales success in Canada in 1984, Hyundai has received numerous inquiries from U.S. dealers anxious to obtain franchises, according to John Kim, senior coordinator to vice president for Hyundai Auto Canada in Markham, Ont., near Toronto.

Hyundai is planning a reception at the upcoming NADA convention in San Francisco and will use the event to gauge interest in franchises. But if response to recent publicity about Hyundai's U.S. plans is any indication, the Korean auto maker will have little trouble rounding up a network of retailers.

"Many American dealers are very interested in a Hyundai franchise," said Kim. "They have phoned me and said they want to have a dealership, but we have not started dealer recruitment officially."

Kim said U.S. dealers have been impressed both by positive reports from the company's franchise-holders north of the border, and by Hyundai's sales performance in Canada.

At public introduction of its Pony subcompact last January, Hyundai projected sales of 5,000 units for the calendar year. But the final total, due to be reported late last week, was expected to reach 25,000.

Through Friday, Dec. 28, Hyundai reported 1984 sales of 24,328. The Korean firm will finish fourth among Canadian importers for the year, behind Honda Canada, Inc.; Toyota Canada, Inc., and Nissan Automobile Co. of Canada. But Hyundai has been running third, ahead of Nissan, since August.

The new Canadian entry captured about 5 percent of the overall domestic market in 1984, according to William Ker, national sales manager for Hyundai Auto Canada, who said Hyundai's Canadian operation now accounts for roughly 20 percent of the parent company's worldwide automobile sales.

The Canadian sales success has resulted in pressure to remove a tariff loophole that allows the Pony to be shipped duty-free from Korea. The Pony is imported under a special tariff applicable

No increase at this time, company says

Ford won't follow GM price hike

By John K. Teahen Jr.
Managing Editor

Ford Motor Co. last week decided not to play follow-the-leader with General Motors on 1985 car prices.

Philip E. Benton Jr., Sales Operations vice president, said, "Ford has chosen not to increase prices of its 1985 cars at this time in an effort to maintain the continuation of the sales momentum established by Ford and LLincoln-Mercury dealers in the 1984 calendar year."

The words "at this time" apparently mean that Ford has not slammed the door completely on a price hike, but the company obviously is not marching in lockstep with GM.

Chrysler Corp was still studying the matter at presstime.

GM sent its rivals to their calculators, computers and the like by announcing a $296 hike that took effect Jan. 2.

It was GM's second increase of the 1985 model year. Coupled with a $292 average boost at the beginning of the season, it brought GM's hike on its new cars to an average of $588.

Auto observers had various explanations of GM's action. One thesis was that it might be a profit hedge against a sales year that might not be as good as the auto makers have proclaimed in their public utterances.

Others looked back to last fall's labor contract. The new pact was hailed as noninflationary, but some onlookers feel that GM gave away the store.

Said one price analyst last week, "Any increase in labor costs is playing into the hands of the Japanese, especially if the Voluntary Restraint Agreement is not renewed or if the Japanese 'quota'

breaking news

Nissan's first U.S.-built car to roll early

SMYRNA, Tenn.—Nissan Motor Mfg. Corp. said its first U.S.-made auto, a Sentra, will roll off the line here March 26, roughly one month ahead of schedule. Plans for a second shift to be added in June are on schedule, Nissan said. Over a three-year period, capacity will be expanded to 140,000 trucks and 100,000 cars; Nissan built 100,000 cars here last year.

BMW puts $5.6 million in robot vision firm

PITTSBURGH.—A newly formed subsidiary of American Robot Corp. here has received $5.6 million in equity and research money from BMW to support advanced machine vision products.The new company, American Industrial Vision Corp., is developing vision systems for inspecting complex assemblies, dimensional gauging, seam location and tracking and adaptive control of robots. Romesh Wadwani, chairman of American Robot, said BMW is looking for investments and research and development agreements with American companies offering specialized technologies with potential to improve development and production methods in its car, motorcycle and engine plants.

Show sold out with waiting list for openings

Bigger turnout predicted for NADA convention

WASHINGTON.—Reflecting the economic resurgence in automotive retailing, attendance at the NADA convention later this month is expected to top last year's tally of 17,000.

The convention will be held Jan. 26-29, with most sessions held in San Francisco's new Moscone Center. Some events will take place at the Civic Auditorium.

"Dealers are hungry for the kind of knowledge and information which is being presented," said James P. Jennings, outgoing NADA president.

"They've had to be professional managers to survive the recession of the early 1980s and now they want to be still better executives to thrive in the marketplace of the future."

Space for the equipment and services exhibition, which will be held in Moscone Center, was booked in less than a week after it was offered, NADA said. More than 120 companies are on a waiting list for any openings that might develop.

Workshop presentations, which reflect carefully researched topics covered by successful dealers, allied industry executives and expert consultants, will address 37 subjects in 96 sessions.

In addition, 21 separate make meetings will be held for dealers to provide forums for discussions of important issues and market conditions.

The annual Time Magazine Quality Dealer Awards will be presented at the opening session, which begins at 3 p.m. Saturday, Jan. 26, at San Francisco's Civic Auditorium. These awards are presented to outstanding new-car dealers for exceptional performance in their dealerships, combined with exceptional community and civic service.

Keynote speaker at the convention's opening session Saturday

But showroom date is months away

Ford Aerostar bows at two auto shows

By Matt De Lorenzo
Staff Correspondent

LOS ANGELES.—Ford's entry into the compact-van market, Aerostar, made its debut at the Los Angeles Auto Show and the Washington International Auto Show over the weekend, even though Job One isn't scheduled until May and the sale date is tentatively scheduled for June.

The rear-wheel-drive van will be offered in two versions, Aerostar Wagon (a window van geared to the passenger market) and Aerostar Van (a panel unit for commercial use). Base power plant is a 2.3-liter, four-cylinder engine, while a 2.8-liter V-6 is optional.

Louis Lataif, Ford Division general manager, said here, "65 percent (of Aerostar buyers) will replace their car" when they buy the truck. He said Ford expects to build and sell 200,000 units in the first year, 60 percent wagons and 40 percent vans. About 10 to 12 percent will be allocated for RV and custom conversions. Lataif said the target market is 30-to-35-year-old, college-educated buyers with household incomes of $40,000 plus. He expects half of them to be women.

Aerostar will have a 2,000-pound payload capacity and a trailer towing capability up to 5,000 pounds.

Lataif said Aerostar is expected to fit in a niche between the offerings of Chrysler Corp. and General Motors in the market. "The Chrysler entries are primarily passenger" units, he said, estimating that 90 to 95 percent of the build are window units. "GM's is much more commercial. We think we will be right in the middle."

Speaking at the Washington auto show, Berle Stajich, compact light-truck marketing product planner for Ford Division, said the Aerostar will not get dual rear doors for at least a year.

This will hinder the company's efforts in reaching service-industry customers, but Stajich said the schedule could not be moved up.

The service industries will be the prime target of Aerostar.

The success of Chrysler's small vans has fueled expectations that the new segment could reach as many as 800,000 to one million units, although Ford is taking a more conservative view.

"We're estimating it to be 600,-000 to 650,000 for all the players," Lataif said, adding that at 200,-000 units, "we will get a third share" which is where the company wants to be.

Chrysler's decision to stick with large cars in St. Louis rather than adding a second source for the minivans may lend credence to this more conservative estimate of the market.

"Euphoria took over for a while, now reality is setting in," Lataif said of early estimates of the segment's strength.

Lataif said the introduction of Aerostar may reduce station wagon sales by as much as 10 to 15 percent, but he doesn't see the vehicle replacing station wagons across the board at Ford.

"The draw (to Aerostar) won't be concentrated in one area," he said, noting that he expects to get buyers from full-size vans, station wagons and passenger cars.

Lataif confirmed that 4WD is planned for the van, although it may be as far as two years away. He doesn't see 4WD Aerostar hurting Bronco or Bronco II sales.

Lataif said he is anxious to see Aerostar, which will be sold as a 1986 model, on the road. The delay in bringing the vehicle to market is not product related, but rather the result of putting together the new modular production system in St. Louis, he said. Work on the nearly mile-long assembly line is expected to be completed soon.

In Brazil, Del Rey is a Ford

Ford of Brazil has provided a facelift for its 1985 Del Rey. The Del Rey is totally Brazilian in design and has no counterpart in Ford's U.S. lineup. It is similar in size to a Ford Tempo.

Tire makers hike prices 1-3 pct. on replacement units

DETROIT.—Nine tire manufacturers, including five major producers, announced price increases of 1—3 percent for replacement tires, effective Jan. 1 or early 1985.

Manufacturers raising prices include Firestone Tire & Rubber Co.; Goodyear Tire & Rubber Co.; B.F. Goodrich Co.; Uniroyal, Inc., and General Tire & Rubber Co.

Other producers increasing prices are Kelly-Springfield Tire Co., Armstrong Rubber Co., McCreary Tire & Rubber Co. and Dunlop Tire & Rubber Corp.

Prices to original equipment manufacturers were set last summer and are not affected.

To bring Yugo cars to U.S.

Bricklin forms shipping company

By John A. Russell
New York Staff Writer

NEW YORK.—A new shipping company, Automobile Transportation International, has been formed by Fram Shipping, Ltd., of Bermuda, and Bricklin Industries, Inc. The company will transport the Yugo 55 to the U.S.

ATI also purchased stock in Yugo America, Inc., the importer of the Yugoslavian subcompact, for an undisclosed price. However, a spokesman for Yugo said it was a seven-figure investment and the money came from an initial investment by Fram Shipping.

Fram Shipping, established in Bermuda in 1974, is a holding company and ship brokerage company. There are 21 companies under the Fram umbrella, and the interests are varied. They include coal mining operations and shipping operations.

ATI is owned jointly by Fram and Bricklin Industries, the parent company of Yugo America, Inc.

Under the arrangement, ATI will transport the Yugo cars through direct contracts and long-term leases. A spokesman for Yugo said that because of ATI's expertise in shipping, it would handle the contracts with various shipping companies.

The company has not decided which port or ports of entry it will use in the U.S..

Per Arneberg, managing director of Fram Shipping, has become managing director of ATI.

He said, "Fram Shipping, Ltd., is pleased to join with Malcolm Bricklin and his associates in this exciting venture. We look forward to what we believe will be an important step in the marketing of new automobiles from overseas."

Bricklin said he intends to import 35,000 cars during the first 12 months starting in late May and expand to 76,000 cars in the second year.

The Yugo is to have a suggested retail price of $3,990.

Mileage guide for '85 models issued by DOE

WASHINGTON.—The cars themselves have been on the market for a while but the 1985 Mileage Guide is just now making it.

The Department of Energy, which handles the guide's distribution, said last week that dealers must display them and have copies available for prospective customers on or before Jan. 11. The department said that any dealer who does not yet have the guides should contact the Technical Information Center in Oak Ridge, Tenn., at P.O. Box 62.

The guide this year gives both city and highway fuel economy ratings discounted for real world performance: That is to say, the city number is discounted by 10 percent from the EPA's dynamometer generated figure and the highway number is discounted by 22 percent.

Mexican engine due for U.S.-built Nissan

By Jake Kelderman
Washington Reporter

WASHINGTON.—The Nissan Sentras that will begin rolling from the company's Smyrna (Tenn.) assembly plant this spring will be a product of more than just Japanese and American cooperation. Mexico eventually will play a part.

According to a report in the Japan Economic Journal, Nissan's U.S. manufacturing subsidiary will begin importing engines for the vehicles from Nissan's Mexican operation by the end of 1985 or the beginning of 1986.

This will be done for two reasons: To cut production costs and to satisfy a Mexican Government requirement that 50 percent of all goods manufactured by foreign-owned companies be exported.

Nissan Mexicana, which started operations in July, 1983, currently produces 8,000 to 9,000 four-cylinder engines a month for front-wheel-drive subcompact cars.

About half of those go into vehicles the subsidiary produces and the other half are shipped to Japan for installation in cars Nissan exports. Nissan Mexicana also produces stampings for the Smyrna facility.

"We have confidence in the quality and performance of engines made at the Mexican plant," a Nissan official said.

Mexico is expected to play an increasing role in the North American auto market, primarily as a supplier to the industry. This is because of its very low wage rates, its proximity to the U.S. and its export policy which requires any foreign producer to export 50 percent of its production.

In additon to Nissan, Chrysler Corp., Volkswagen and Ford Motor Co. now, or will, source from plants south of the border.

Merkur to start early in California market

By Matt De Lorenzo
Staff Correspondent

LOS ANGELES.—Merkur XR4Ti, Ford's German-built sport sedan, will go on sale in California Jan. 24, two months ahead of the national introduction, Robert Rewey, Lincoln-Mercury general manager told a news conference here. The car made its debut at the Los Angeles Auto Show over the weekend.

Starting at a base price of $16,-538 in five Western states, the XR4Ti will be sold by Lincoln-Mercury dealers holding the Merkur franchise. Base price elsewhere will be $16,361. The higher-priced version includes air conditioning, Pirelli P6 tires, alloy wheels and scheduled maintenance for the first three years or 36,000 miles. About 20,000 of the cars are expected to be sold in the first year.

Currently, 725 of Lincoln-Mercury's 840 dealers have been qualified to handle the new franchise, Rewey said, adding that more car lines will be offered through the new network. He predicted the Merkur, which will also feature a four-door sedan and wagon models different from the XR4Ti, will hit 100,000 sales by 1990.

"That's about 10 percent of the projected Lincoln-Mercury volume for the beginning of the decade," Rewey said. "Merkur will lead Lincoln-Mercury into a new growing segment of the market, giving us incremental sales and improved market shares."

The XR4Ti's launch will be supported with the Merkur Commitment owner program, similar to the division's Lincoln Commitment effort.

That program includes a 36-month, 36,000-mile warranty, an

Magazine, NADA mark 16th year of sponsorship

63 nominated for Time awards

NEW YORK.—Time magazine has received 63 nominations from automotive trade associations in 43 states and the District of Columbia for the 16th annual Time Magazine Quality Dealer Awards (TMQDA) program.

Sponsored by Time in cooperation with NADA, the TMQDA program honors outstanding franchised new-car and truck dealers for exceptional performance in their dealerships, combined with distinguished community service.

The 1985 awards will be presented Jan. 26 at the opening business session of the annual NADA convention in San Francisco.

At that ceremony, 20 finalists will be selected and from among them the Time Magazine Quality Dealer of the Year will be singled out. The Quality Dealer of the Year serves as spokesman for TMQDA winners and represents them in meetings in Washington with Cabinet members and with his congressional delegation.

Winners are chosen by a panel of faculty members from the University of Michigan Graduate School of Business Administration. In appreciation, Time makes a grant of scholarship funds to the Graduate School of Business Administration in the name of Time, NADA and all TMQDA winners.

"This is the 16th year of Time and NADA sponsorship of the

A Misle milestone

Henry Misle, left, co-owner of Misle Imports, Lincoln, Neb., and Bryan Misle, general manager of the dealership, accept a 10-year award from Randall Spicher, district sales manager of Mazda Distributors (Gulf), Inc. Misle Imports was the first Mazda deal in Nebraska.

Total is highest in 8 years

Mid-December sales rise 9 pct.

Jenny L. King
Detroit Reporter

Mid-December domestic new-car sales, aided by an extra selling day, posted a 9.16-percent increase over 1983 and pushed the year-to-date total to 7,771,433. It was the best total for the Dec. 11-20 period in eight years.

With nine selling days in the 1984 period, the six major U.S. auto makers managed to add more than 16,000 units to the number of new cars sold a year earlier for a 9.16-percent gain. On a daily-rate basis, they were down 2.97 percent (21,801 in 1984; 22,469 in 1983).

Domestic sales in the Dec. 11-20 period added to 196,209, up from 179,749 a year ago.

On a year-to-year basis, three of the makers were up, whereas the daily-rate comparison shaved it to two makers ahead. Chrysler Corp. and Ford Motor Co. were up both ways and General Motors missed in the daily-rate contest.

Chrysler reported sales of 26,516 new passenger cars, up 15.68 percent from 22,922 in 1983 (up 5.40 percent daily rate). Ford was up 13.73 percent, to 47,035 from 41,358 (up 1.08 percent daily rate). GM sales of 115,095 were up 8.29 percent from 106,284 (off 3.74 percent daily rate).

American Motors reported estimated sales of 3,200, down 20.00 percent from 4,000 a year earlier (down 28.80 percent daily rate). Honda had its first sales decline since it began selling U.S.-built cars, slipping 2.75 percent to 2,939 from 3,022 (down 13.49 percent daily rate) and Volkswagen was off 34.17 percent, to 1,424 from 2,163 (down 41.62 percent daily rate).

Chrysler and Ford were the only makers to increase their shares of the market in the period. Chrysler climbed to 13.51 percent from 12.75 percent and Ford was up to 23.97 percent from 23.01 percent. GM slipped to 58.66 percent from 59.13 percent. AMC was down to 1.63 percent from 2.23 percent. Honda had 1.50 percent in 1984 compared with 1.68 percent a year earlier and VW skidded to 0.73 percent from 1.20 percent.

• In a year-to-year comparison, eight of the domestic makes earned increases, ranging from 5.22 percent for Ford to 56.35 percent for Buick. Plymouth was up 9.50 percent, Chrysler was up 26.76 percent and Dodge was up 11.72 percent. Ford was up 5.22 percent, Mercury was up 19.81 percent and Lincoln was up 52.75 percent. Buick was up 56.35 percent and Chevrolet gained 7.67 percent.

There were minus signs before the results of the remaining makes. Cadillac was off 20.00 percent, Oldsmobile dropped 3.58 percent and Pontiac was down 7.70 percent. AMC dropped 55.56 percent, Renault was down 9.68 percent, VW was down 34.17 percent and Honda dropped 2.75 percent.

Calendar-year sales through Dec. 20 were up 17.95 percent, to 7,771,433 from 6,588,692 in 1983.

Budd Co. creates Transit America

TROY, Mich.—Budd Co. has created Transit America, Inc., from its Philadelphia-based Transit Division railcar design and manufacturing operations.

This move enhances opportunities for growth in the railcar segment of the business, relieving its dependence on Budd, which is primarily an automotive products company, according to a company spokesman.

ATTENTION DEALERS

RANGER INDUSTRIES HAS A PROFITABLE OFFER FOR YOU!

3 DIFFERENT MODELS!
10 FLOOR PLANS AVAILABLE!

RANGER 21

The Ranger 21' Motor Home has been designed with the 'Quality Conscious Buyer' in mind. The stylish interior, from the upholstered furnishings to the fine-crafted cabinets, show the expert craftsmanship used in the Ranger. Which is why Ranger Ind. has made available a 5 Year - Unlimited Mileage Warranty. The aerodynamic profile cuts wind resistance and increases your gas mileage. The Thermaband construction with the fiberglass exterior gives styling to this coach as found on the more expensive motor homes!

ROGUE 22

The Rogue 22' Motor Home offers all the standard features of the Ranger and also includes deluxe features such as: dash air, roof air, cruise control, color T.V., AM/FM cassette stereo, storage pod and Continental tire kit. The Rogue has 4 spacious floor plans and 4 designer interior colors to choose from. Luxury combined with affordability PLUS a 5 Year - Unlimited Mileage warranty available!

ROGUE ROYALE 23

This completely self-contained Mini Motor Home is as spacious inside as many of the more expensive, larger Motor Homes available on the market today. Standard features on this coach include a microwave oven, generator power plant, roof air, dash air, dual stereo system, upholstered velour furniture, Bar/vanity, and much, much more. The Rogue Royale is designed for the veteran traveler who enjoys quality, style and a low price! Also available is a 5 Year - Unlimited Mileage Warranty.

There's every indication that 1985 will bring a boom in small Motor Homes sales nationwide. Your town will be no exception.

"Big bucks" in business usually results from being in the right place, at the right time, with the right products, at the right price.

1. The right place?...Your town, of course.
2. The right time?....Early spring, 1985
3. The right product?...The complete line of Ranger Motor Homes.
4. The right price?...Of Course!
   For information on becoming a Ranger dealer or a state-wide distributor that could start you on your way to a new and profitable source of Motor Homes sales now and in the future, complete the dealer questionaire and mail it today! For a more profitable tomorrow!

R/V DEALER QUESTIONNAIRE
Attention: Ken Waddell, General Sales Mgr.

We are a ☐ dealer ☐ distributor
of the following types and makes of R/V vehicles.

Our R/V market is (please check one) ☐ City Wide ☐ County Wide ☐ State Wide.
We ☐ do ☐ do not now sell small (18'-21') Motor Homes.

I would be interested in becoming a Ranger Industries ☐ Dealer ☐ Distributor, subject to seeing the product, selling agreement, etc.? ☐ Yes ☐ No.
Our approximate sales volume of R/V vehicles (all types, big or small) in 1984 was:

I am sufficiently interested for you to have your representative contact me to set-up an appointment for a complete product presentation on ☐ Ranger 21, ☐ Rogue 22, ☐ Rogue Royale 23.

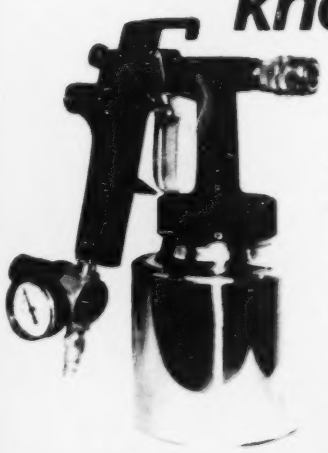
Do you know me?



I'm the exclusive, rust proofing spray gun used by many major rust proofing companies for the last five years.

For the first time I am available from CMC on a direct basis to distributors reps.

My spray assembly is precision engineered with no moving parts to clog my smooth spray. And I'm easy to cleanup.

P.S. I also come with a full line of automotive care products. Call today at (312) 578-4700.

U.S. seeking $100,000 fine in odometer case

WASHINGTON. – The Justice Department has charged an Oklahoma used-car dealer with violating the federal odometer law. The case, brought in federal district court in Tulsa, seeks $100,000 in fines.

Acting Assistant Attorney General Richard K. Willard said the action was brought against Burton L. Eddings, of Commerce, Okla., who was doing business as Commerce Auto Sales.

The Motor Vehicle Information and Cost Savings Act and NHTSA regulations require odometer disclosures and other recordkeeping when car titles are transferred.

Last year, a NHTSA investigator inspected records of vehicles titled by Eddings and found widespread violations from October, 1982, to January, 1983.

During that period, according to the complaint, Eddings received title to 485 vehicles but failed to acknowledge receipt of mileage statements for any or to retain such statements at his place of business, as required by law.

In addition, says the complaint, Eddings failed to provide odometer mileage statements when retransferring title to the 485 vehicles.

Each law violation carries a maximum $1,000 penalty with a maximum of $100,000 for any series of violations.

The complaint asks that Eddings be permanently enjoined from further violations.

Dealer sentenced to five years for odometer fraud

HARRISBURG, Pa. – A former automobile dealer was sentenced to a maximum of five years in prison in the U.S. Middle District Court on charges of rolling back odometers on used cars before selling them to other dealers and for failing to file income tax returns.

U.S. Attorney Sally Lied said it was the largest rollback case brought in any federal court.

Saying that he wanted to make it clear that such criminal activity "is not going to be brushed off," Judge William Caldwell sentenced Richard Lee Becker, former owner of Imperial Motors, York, to a total of 187 years in jail, the sentences to be served concurrently for a maximum of five years.

Becker had pleaded guilty to 120 counts stemming from rollbacks and three counts of failing to file income tax returns for 1981-1983, during which time the government said he had a gross income of at least $150,000.

A former employe of Becker's, Ralph E. Laughman, was sentenced to one year in prison on one count of rolling back an odometer, and another employe is scheduled for sentencing in January.

Noting that 90 percent of the 1,200 car titles Becker processed through the state Bureau of Motor Vehicles involved cars with rolled-back odometers, Lied said, "His business was to roll back odometers."

No. 1 in Vermont

SOUTH BURLINGTON, Vt. – With completion of its showroom expansion, Mayo's Subaru is now the largest Subaru dealership in Vermont.

truck industry news

Rock says industry total will hit 4.3 million units

GMC chief sees record '85 sales

By Matt DeLorenzo
Los Angeles Reporter

ANAHEIM, Calif. – Calling the truck market the most dynamic segment of the automotive industry in the past decade, John Rock, manager, GMC Truck & Coach Operation, predicted truck sales would hit a record 4.3 million units in 1985.

That number would best the previous record of 4.1 million units set in 1978.

Rock said GMC expected to close out 1984 with 323,000 sales (280,000 light and 43,000 medium and heavy-duty) which reflects a 17 percent increase in light-duty units; a 56 percent gain in medium-duty, and a 98 percent increase in heavy-duty units. Overall, GMC's sales for 19 were up 22 percent over 1983, he said.

He expects the upward trend to continue into 1985 despite signs that the recovery may be maturing.

For 1985, Rock is projecting GMC sales of 365,000 units, which would break the previous record of 351,000 units set in 1978.

Noting that 1984 is the fourth consecutive year of rising truck sales, Rock said the increasing truck penetration is evidence that consumers are choosing trucks as their primary vehicles.

"The national passion for light trucks was maintained during some of the darkest days of the recession," he said. "Over the last five years, more than 13.5 million light-duty trucks have been sold in the U.S."

Rock said trucks now are considered a functional necessity, and pointed to the popularity of GMC's S-15 Jimmy sport/utility vehicle among women as proof.

"For example, surveys indicate that women are the primary drivers of nearly 30 percent of the 4X4 GMC compact S-15 Jimmy sports utility trucks purchased today."

For 1985, Rock sees "150,000 people switching over from the car side to the truck side for their primary vehicle."

In addition to showing the new Safari compact van and the rest of the vehicles in the GMC line, Ralph Tredway, who is in charge of GMC's light-truck engineering, talked about the 4.3 liter V-6 engine that will be optional in the Safari and the base engine on all GMC full-size light trucks and vans.

The new V-6 replaces the 250-cubic-inch Chevrolet in-line six-cylinder power plant as a base engine. GMC will continue to offer the 5.7-liter gasoline and 6.2-liter diesel V-8s as options.

The 4.3-liter V-6 is rated at 155 HP with 230 foot pounds of torque using a compression ratio of 9.3:1. The engine is also fitted with a four-barrel carburetor.

Dean Forester, director, medium and heavy-duty truck and bus engineering, said GMC also is offering powertrain

Diagnosis called must for truck mechanics

By Arthur Flax
Assistant Truck Editor

The trucking industry needs people who can maintain vehicles, not overhaul them, according to Blaine Johnson, director of research and development at Ryder Truck Rental, Inc.

Johnson, who participated in a mechanic-training panel at the SAE Truck and Bus Meeting in Dearborn, said Ryder wants "generic" mechanics who can diagnose problems in electronics, fuel systems, engines and air conditioning.

Johnson said Ryder employs some 7,000 mechanics and 900 maintenance supervisors who service about 84,000 trucks.

Most of a mechanic's time is spent lubricating, adjusting and diagnosing trucks, according to Johnson.

"We know how long a vehicle will last," said Johnson. "We don't plan to do any engine or transmission overhauls."

Only 6 percent of a mechanic's time is spent on overhauls, he said.

"The mechanic we demand is one who can diagnose what needs to be overhauled and get the vehicle back in service," Johnson said.

"Our mechanics spend most of their time avoiding what they were taught in (trade) school," he added.

He indicated that trade schools spend a great deal of time teaching mechanics to overhaul components.

"If a trainee spends most of his time assembling and disassembling components, he won't know the fundamentals of the systems," he said.

Johnson said Ryder tries to select people who have good work habits and are "teachable." The company invests about $4,000 in training each mechanic, he said. About 15 percent of those hired are "raw recruits." The best mechanics, said Johnson, come from a farm background.

In order for "vo-tech" schools to develop good mechanics, truck users must supply equipment and

Modified Ford CLT 9000 'sips' fuel

This modified Ford CLT 9000 tractor/trailer combination, done by Bob Sliwa, a Glastonbury (O.) owner/operator, averaged 9.33 MPG on a cross-country run. Modifications included the conversion of a trailer nose cone to the front of the tractor. The rig was powered by a reworked Cummins 400 engine and a 13-speed Fuller RTO transmission.

Gains in truck design linked to technology

By Arthur Flax
Assistant Truck Editor

Advances in technology will improve the quality, payload, vehicle dynamics and emissions of trucks, according to a panel of chief truck engineers at the SAE Truck and Bus Meeting in Dearborn.

Paul A. Turvill, general manager, PACCAR, Inc., Technical Center, said, "We look at ourselves as capital-equipment suppliers. The most compelling reason our customers buy are economic."

He said improvements in trucks will come in the areas of more integrated aerodynamics and systems design, greater payload and higher efficiency.

To place the evolution of trucks in perspective, he said he recently heard "an IBM guy say planes are archaic compared to computers. If they had kept up, we would be able to fly from New York to L.A. in 44 minutes for $6.80. The only catch is, you would have to fit 600 people in the size of a shoebox."

"Trucks evolve, passenger cars surprise," said Ralph Tredway, director, light-duty engineering, General Motors Truck & Bus Group.

"My goal is not to make the vehicle last longer. I want to make the time it takes to wear the truck out more comfortable." Trucks, he said, don't have to last forever because advances in technology will make older vehicles obsolete. A truck, said Tredway, should require few repairs during its useful life.

To increase serviceability, Tredway predicted trucks will feature cleaned-up engine compartments, multiplex wiring (one wire control of electronic components) and greater use of access panels.

On his "wish list" were improvements in quality in design and manufacture, durability and utility.

Under the heading of utility, he envisioned a "deproliferation" of truck models and multi-use product design. For example, he said, one basic cab module could be used as the basis for an entire line of cabover and conventional trucks.

Among Tredway's visions of the future were computer-controlled, hydraulically variable suspensions to account for empty and loaded truck conditions, electromotive drive whereby a low pollutant constant-speed engine driving a generator would power a motor at each truck wheel and all-wheel steering which, he said, has applications on off-road utility vehicles and vans.

William B. Smyth, Freightliner

Off-road track for Jeeps set up at Michigan deal

TAYLOR, Mich. – An off-road test track has been created at Taylor AMC/Jeep/Renault here to demonstrate the rough-terrain ride and handling characteristics of Jeep vehicles.

"Jeep sport/utility vehicles are right at home when it comes to tackling rough road and off-road environments," said Tom Szott, general manager, Taylor AMC/Jeep/Renault. "Hazards typically encountered by four-wheel-drive vehicles in the backwoods have been created behind our dealership."

The off-road course was designed with the assistance of Mark Smith, a Jeep enthusiast from Georgetown, Calif., who has been running the Jeepers Jamboree for more than 25 years.

The Jamboree is an annual event for Jeep CJ enthusiasts that takes them over the rugged terrain of the Rubicon Trail from Georgetown to Lake Tahoe, Nev.

The Taylor off-road course is one of a number built with Smith's assistance at AMC/Jeep/Renault dealerships in metropolitan markets across the country.

Szott said customer response to the new track has been outstanding.

"Faced with bog pits, rock piles and 'camelback' humps, their initial reaction is that there's no way any vehicle can get through these obstacles," Szott said. "But one trip around the track makes them believers.

"With the off-road track right behind our dealership, our customers can experience for themselves the remarkable tough terrain capabilities of Jeep vehicles before they buy," Szott said.

Quality, payload, dynamics, emissions improved, too

Technology assists truck design

Continued from Page 22

Corp. senior vice president – engineering and technology, said trucks will benefit from more integrated design.

He added that trucks would evolve aerodynamically, getting away from the "hang-on" aero aids and moving to ground-up aerodynamic design.

Suspension systems, he said, must be improved to enhance ride quality as well as handling.

"We need a better means of improving ride than using an air seat," he continued. "Heavy tractors are just a big mass of spring systems. New technology will allow us to get hold of that."

A high premium will be placed on lightweight vehicles, Smyth said. That will require tractor makers to get together with trailer builders.

"If you have a 15,000-pound tractor, maybe 10,000 pounds (and a loaded trailer), you're at the end of the fishbowl," he said.

Trucks, he said, must be made environmentally acceptable.

"If we don't reconcile that fact, we are burying our heads in the sand," Smyth said.

Edward T. Mabley, Ford Truck Operations heavy-truck product-development manager, said, "We must forget about any opportunity to waive (EPA's) particulate standards, and accept that there will be one."

It is better, he said, for the industry to consider the health benefits and go after the problem as a whole.

Frank Pekar, Mack Trucks, Inc., director of product development, predicted electronics would be used to improve drivetrain efficiency.

He envisioned low-profile/run-flat "super-single" tires, small high-temperature cooling systems for less frontal area and weight, more efficient and hotter-running engines to go with the cooling systems and retractable tractor-trailer gap seals for highway and city operation. He also anticipated effective splash and spray suppression devices and anti-lock brakes.

In fact, most engineers predicted anti-lock brakes would make a comeback.

Daniel L. Rivard, Ford Truck Operations light-duty product development manager, said, "If you look at the physics of the situation, it leads to anti-lock."

Smyth said truck users are beginning to see that anti-lock brakes will be beneficial.

"The day is not too far off when the marketplace will generate demand," he said.

Chevy deal for Ducote

Kenneth J. Ducote signs a Chevrolet agreement for Ken Ducote Chevrolet, Inc., Kaplan, La. Looking on are J.W. Croft, left, Chevrolet's New Orleans zone manager, and J.W. Cox Jr., assistant zone manager – sales.

GMC chieftain predicts record sales in 1985

Continued from Page 22

improvements in its larger vehicles.

The 8.2-liter Detroit Diesel V-8 turbodiesel has been bumped to 230 HP from 205, and torque has been improved from 430 to 505 foot pounds.

In addition to these increases in torque and power, Forester reported that emissions have been reduced with the addition of evaporative emission canisters for the first time on medium trucks. Use of this equipment, to meet new pollution standards, has reduced hydrocarbon emissions by 80 percent over uncontrolled units, he said.

Rock said the new Isuzu-built Forward cabover medium-truck continues to sell well. Offered in GVWs of 27,500 and 29,700 pounds, the Forward is powered by a 5.7-liter in-line six-cylinder turbodiesel. The engine is rated at 165 HP and 335 foot pounds of torque.

Asked about increased foreign competition in the heavy-duty market, Rock said he expects it to continue as manufacturers look to new markets to boost incremental sales.

"The economic cycle around the world has not picked up as it has in the U.S.," Rock said, adding that "these manufacturers are looking around the world to pick up volume."

Since heavy trucks represent only 7 percent of the market, Rock feels the influx of competitors is "a show of the need for a sorting out that is going to happen."

Japanese exports slip in September

TOKYO.—New-car exports by Japanese makers totaled 325,848 in September, compared with 329,705, a year earlier, according to figures compiled by the Japan Automobile Manufacturers Assn.

Leading destinations by make were: U.S. 147,970; West Germany, 19,684; Canada, 18,884; Malaysia, 14,986; U.K., 10,782; Australia, 9,527; Libya, 8,109; Puerto Rico,7,954; Netherlands, 6,138; Saudi Arabia, 5,523, and France, 5,030.

Forget everything you know about Extended Service Contracts.

Now there's The Advantage™ from Western Diversified.

This could be the most important ad that you read today. The Advantage™ and The Advantage Plus extended service contract from Western Diversified is the finest product on the market, and that translates into one word for you: PROFITS.

For your customers. With The Advantage, you are providing your customers with a no-hassle, comprehensive extended service contract that allows them to enjoy their new or used car "worry-free."

For your dealership. The Advantage allows you to achieve maximum profits, the greatest customer satisfaction, with no personal liability. Western Diversified has been in the Finance and Insurance business over 22 years. They have a commitment to their dealers that has been proven over the test of time. Western Diversified is around for the duration, committed to higher profits for their dealers through better programs. The Advantage and The Advantage Plus extended service contracts are yet another of the quality programs brought to you by Western Diversified. Call us for details, TODAY.

Won't seek arbitration in Connecticut

Ford shifts stand on lemon law

HARTFORD.—In a move to concentrate on its national customer satisfaction program, Ford Motor Co. has withdrawn its application for Connecticut certification of its Lemon Law arbitration program.

The Ford decision leaves only one auto maker—Chrysler Corp.—applying for a state-authorized program in Connecticut.

The decision also seems to indicate a challenge by auto makers to take Connecticut's Lemon Law to court on a federal level, according to Rep. John J. Woodcock III, Democrat, who was a catalyst for implementation of the state Lemon Law several years ago.

Under guidelines of the Lemon Law revised by the Connecticut Legislature in 1984, to gain state approval of their consumer arbitration programs, manufacturers must comply with specified program concepts.

(The state arbitration program, in place since Oct. 1, allows car owners to address complaints involving manufacturers without certified programs to the state Department of Consumer Protection.)

Louis Plummer, Ford representative, said that Ford withdrew its application for certification because the company wanted to stress a national approach.

Ford preferred not to redesign its arbitration program to comply with Connecticut's limited requirements covering only new cars under warranty, Plummer said.

For its part, in October Connecticut rejected Ford's application, on a tentative basis. The state said that Ford's program ineffect in Boston should be extended to Connecticut and that the company's provisions for awards covering physical and property damage were limited.

While the matter of awards could have been resolved, Ford decided that the broader, national approach was preferable, said Plummer.

It may well be that when the first case is filed by a Connecticut consumer, the auto makers will seek relief in a federal court, said Woodcock.

Assistant State Attorney General Robert M. Langer disclosed that state government officials have voiced concern that if no manufacturer's certification is issued, the state Consumer Protection Department will experience unanticipated fiscal burdens.

Akama named president of Bridgestone in U.S.

TORRANCE, Calif.—Norifumi (Ken) Akama has been named president of Bridgestone Tire Co. of America. He succeeds Kunio Satake, who has returned to Japan for a new assignment with the parent Bridgestone Corp.

Akama, 46, has been with Bridgestone 24 years. Since April, 1983, he has been executive vice president of the company's U.S. sales and marketing subsidiary.

Dealers donate in Florida

The Florida Independent Automobile Dealers Assn. presented Dr. Lindy McGowan, second from right, executive director of Hope Enterprises, a check for $28,350 as a donation to the three homes for battered and abused children under the jurisdiction of Hope Enterprises. With McGowan, from left, are: Cher Ray, president, FIADA women's auxiliary; Bill Ray, FIADA president, and M.L. Vaughn, FIADA Marathon Committee chairman.

Ford, brewer to sponsor 5 drag-race cars

DETROIT.—Ford Motor Co. and Anheuser-Busch, Inc., will go a step beyond the norm in their sponsorship of drag racing this year.

Usually, a sponsor concentrates efforts in one class of racing. In 1985, however, Ford and the big brewer are teaming up to sponsor five cars and drivers in five of drag racing's complicated system of clasification.

Their decals will be on cars in these classes: Funny Car (Tempo), Pro Stock (Thunderbird), Super Gas (Thunderbird), Super Stock (Mustang) and Competition Eliminator (Mustang). The cars will be on the Budweiser Motorcraft Superteam.

"This is a logical expansion of our involvement with motorsport," said Kenneth W. Myers, product and marketing manager for Ford Parts and Service Division.

He said Ford hopes to see records set by each of the five drivers and their cars during the coming season.

Kenny Bernstein, of Dallas, Funny Car record holder with a speed of 260.11 MPH, put together the five-car team. He said Ford and Anheuser-Busch will spend about $750,000 during the year.

French body firm to build Taiwanese plant

TAIPEI, Taiwan.—Chausson of France, which has been designing and manufacturing molds, auto bodies and van assemblies for 47 years, plans to build a factory here.

San Fu Motors, the local representative for Renault, said Chausson would manufacture molds for auto bodies in Taiwan and would also offer design services.

1985 opens with a short week

Makers start year with 112,590

By Louise Kertesz
Detroit Reporter

Domestic makers, returning to work after the holidays, scheduled production of 112,590 cars during the first week of 1985.

The total for the three-day work week was 34.28 percent below the 171,313 for the full work week ended Dec. 22, 1984, and 17.27 percent lower than the 136,097 cars built during the first week of 1984 when plants operated for four days.

American Honda's Marysville (O.) facility was the only U.S. assembly plant operating during the short week ended Dec. 29. It built 1,536 Accords in the three-day period.

Actual production figures show that December output of 562,005 cars was down 8.47 percent from 1983's 614,038.

Companies shared last week's estimated production as follows: General Motors, 60.91 percent; Ford Motor Co., 21.86 percent; Chrysler Corp., 14.30 percent; American Honda, 1.68 percent; Volkswagen of America, 1.07 percent, and New United Motor Mfg., Inc., 0.18 percent.

American Motors' Kenosha facility was down last week for inventory adjustment. The plant is scheduled to resume production today (Jan. 7).

GM's Fiero plant in Pontiac was down last week in what a spokesman called "the second phase of facility changes needed to accelerate production of the V-6 and GT models." The plant is scheduled to return to work today.

U.S. production of the Pontiac 6000, which began in Tarrytown, N.Y., in early December, will now be included in the weekly report.

Also included is estimated output of the Nova, the GM-Toyota joint venture car built in Fremont, Calif. by New United Motor Mfg., Inc. (NUMMI).

GM scheduled two overtime shifts Saturday (Jan. 5) at the following plants: Flint (Buick B and G Lines); Lansing (Oldsmobile No. 1); Detroit; Doraville, Ga.; Fairfax, Kans.; Janesville, Wis.; Lakewood, Ga.; Leeds, Mo.; Lordstown, O.; Oklahoma City; Willow Run, Mich., and Wilmington, Del.

One shift was scheduled Saturday at GM plants in Lansing (Oldsmobile No. 2) and Orion Township, Mich.

Chrysler scheduled one overtime shift Saturday at its plant in Sterling Heights, Mich., and two shifts at its facility in St. Louis (No. 2).

Chrysler also has scheduled a nine-hour daily shift this week at the Sterling Heights plant. Two nine-hour daily shifts are scheduled for the St. Louis plant.

California to get Merkur Jan. 24, two months early

Continued from Page 3

800 number hotline to handle customer complaints and a personal followup from a Ford Parts and Service Division representative after the sale to ensure customer satisfaction.

"Within 30 days, new owners will receive a letter from Lincoln-Mercury Division thanking them for selecting a Merkur," Rewey said. "Included with the letter will be a unique Merkur key chain and special owner's identification card personalized with his or her name, vehicle number, delivery date and the hotline 800 number."

The buyer will receive an owner's log book in which service information and trip logs can be recorded. The first mailing will also have a customer satisfaction survey. A newsletter is being started by the division to keep the owner body up to date on press and industry reaction to Merkur as well as other functional and technical information.

As part of the Merkur launch on the West Coast, Lincoln-Mercury is supplementing the 36/36 warranty with a full maintenance provision for buyers in California, Oregon, Washington, Alaska and Hawaii. According to Rewey, the only things the buyers will be responsible for in the first three years of ownership in those states will be gas and oil. Twenty percent of XR4Ti's production has been allocated to the West Coast.

The XR4Ti is a three-door hatchback powered by a 175 HP turbocharged 2.3-liter four-cylinder fuel-injected engine. The rear-wheel-drive car features five-passenger seating, a unique bi-plane rear spoiler, gas shocks and a high level of standard equipment. Only five regular extra-cost options will be offered initially; automatic transmission, moonroof, power window and door lock convenience group, leather trim and metallic paint. Speed control and a fuel computer are options that will be added later.

The cars are assembled for Ford by Wilhelm Karmann GmbH of Germany and will be shipped to five U.S. ports—Baltimore; Jacksonville, Fla.; Houston; Los Angeles, and Portland, Ore.

Rewey feels that XR4Ti, which is being positioned against other European imports such as BMW, Volvo, Saab and Audi, won't cut into Ford's sales of the SVO Mustang. When asked what domestic cars Lincoln-Mercury expects to conquest with Merkur, he identified Corvette, Fiero and Firebird. The company is also looking at owners of Japanese cars who want to move up.

Truck production opens January with 40,438

Domestic makers scheduled assembly of 40,438 trucks during the three-day week that began the year.

The total was 38.67 percent below the 65,935 built during the final work week of December and 12.99 percent lower than the 46,475 assembled in the first week of 1984, when plants worked four days.

December's actual production of 210,354 trucks was up a bit (1.68 percent) from 1983's 206,872 and was the best December build since 1978's 276,248 units.

General Motors' Pontiac Truck and Bus Plant No. 2 is down for inventory adjustment until Jan. 21. The shutdown involves 1,800 workers.

Pontiac Truck and Bus Plant No. 6 is down until Jan. 14 due to a shortage of parts needed to meet an emission control standard that became effective Jan. 1. It means a layoff of 2,000 people.

GM scheduled two overtime shifts Saturday (Jan.5) at its plants in Janesville, Wis.; St. Louis, and Lordstown, O.

First '85 week brings 11,699 cars in Canada

Returning for a three-day work week after the holidays, Canadian makers scheduled production of 11,699 cars last week, 41.19 percent below the 19,894 built during the full week ended Dec. 22 and 33.14 percent lower than the year-ago week's 17,497, which had one more work day.

December auto output of 59,572 was down 17.97 percent from the year-ago month's 72,618.

The truck build was pegged at 11,945 last week, a drop of 25.07 percent from the 15,941 assembled in the final work week of December and 2.20 percent less than the year-ago week's 12,211.

December's production of 54,000 trucks was the best ever for that month.

Chrysler Corp.'s Windsor (Ont.) plant scheduled assembly of 1,720 Plymouth Voyagers, 1,828 Dodge Caravans and 396 Mini Ram Vans, starting the year with a total of 3,944 T-115s.

F&I firm moves

A new car and a new business concept

GM's Saturn Corp.: Something for all

By Marjorie Sorge
Labor Editor

General Motors' new subsidiary, Saturn Corp., offers an entirely new concept in doing business, a new subcompact car and it has something for everybody.

According to GM Chairman Roger B. Smith, it is also the first time GM has added a new nameplate since 1918 when Chevrolet joined GM. The Saturn car is expected to appear as a 1989 model.

Headquarters for Saturn will be in the Detroit area, according to Jospeh J. Sanchez, president of the new corporation. No site has been selected for the actual production facilities although some sources say Michigan, Ohio and Kentucky are primary possibilities.

Saturn gives GM a learning center for new ideas, involves the UAW in its entire operation and creates an entirely new UAW-GM labor agreement, moves toward stopping the Japanese production onslaught in the U.S., allows Ford Motor Co. and Chrysler Corp. to watch and see if GM can make it before they come out with their Alpha and Concept 90 projects respectively and boosts shareholder confidence, observers said.

The corporation may someday become a multinational marketing company and the Saturn may become a world car, Sanchez said.

The new corporation will eventually have assets of $5 billion and initial capitalization of $150 million, Smith said. It will be a self-contained business reporting to Lloyd E. Reuss, head of the Chevrolet-Pontiac-GM of Canada passenger-car group.

At $5 billion, Saturn Corp. is bigger than American Motors which has assets of almost $2 billion. But Sanchez said he would like the company to be "Chrysler-size as soon as we can."

Chrysler had assets of about $7 billion in 1983.

According to Smith, GM formed Saturn as a separate corporation so it would start with a "clean sheet" and produce a minimum amount of paperwork.

"When you start a brand-new corporation, you don't hand them all of the great big personnel, purchasing, financial manuals," he said. "When they start off by themselves they're going to develop their own systems.

"And I'm hopeful that working with EDS (GM's new data processing subsidiary, Electronic Data Systems) they can develop a system where everything is on computers and you don't get a bundle of reports coming in every morning telling you a lot of things you never wanted to know anyway.

"What I'm hoping is that they'll go punch their computers and bring up any piece of data they want. We may not even have a mail boy except to the order room down there."

Some analysts believe that Saturn Corp. will end up being GM's high-tech subsidiary and all

Proud of the 'clean-sheet' results

Saturn, General Motors' new subsidiary, has something for everybody. The high-tech corporation was created to start with a "clean sheet" with a minimum amount of paper work and has a new company-union joint relationship. From left, are GM Chairman Roger B. Smith, GM President F. James McDonald, UAW Vice President Donald Ephlin and GM Vice Chairman Howard Kehrl.

Saturn model lineup is expected to grow

By Dan McCosh
Detroit Reporter

GM's Saturn Corp. is expected to quickly expand beyond the basic two-door and four-door sedans that will launch the "no-year car" program, say GM sources close to the program.

A "sporty" liftback sedan, station wagon and possibly a minivan are further derivatives in the works, giving the new franchise sufficient depth to sustain considerably more than the initial planned 500,000-annual selling volume GM expects.

Addition of the new models also could dramatically increase the volume of the Saturn project—possibly even up to the one-million-per-year range implied by Saturn President Joseph J. Sanchez' claim that Saturn will get "as big as Chrysler."

GM's announcement that Saturn wouldn't go to other divisions handling small cars disappointed many GM dealers, but GM executives insist that neither Chevrolet nor Pontiac will be shortchanged in the small-car field.

The Saturn project still doesn't have an official launch date, but GM Chairman Roger B. Smith indicates that the car could be in production within two years after construction of the new plant begins. This points to a 1988 launch, probably for a 1989 model year designation.

The Saturn project car unveiled at the Saturn Corp. announcement had running gear installed—notably a 1.9-liter all-aluminum engine constructed with a "lost foam technique" block. It was the first time since the ill-fated Vega that GM has shown an all-aluminum engine.

"The four-cylinder engine is one of several we have under consideration, we have to make that

Holiday sales slump leads to 63-day supply

Car stocks rise to 11-month high

By Kathleen Hamilton
Assistant Managing Editor

The number of new domestic cars in dealer and factory inventories on Jan. 1 rose to 1,417,164, the highest level since July 1, thanks in large part to the traditional holiday buying slump.

That translated into a 63-day supply of cars—the highest days-suply figure since Feb. 1, when the supply also was worth 63 days.

On Dec. 1, there were 1,405,417 cars in stock—a 58-day supply. On Jan. 1, 1984, the stockpile was 1,357,995, worth 66 days.

Each make and market segment experienced a month-to-month increase in days-supply levels. The sales rates at each of the makers were to blame: Fewer sales mean their stockpiles will last longer.

American Motors' figures are worth a second look: Its sales declined during the month, but its production increased. Since companies count any cars shipped to dealers as sales on its year-end balance sheet, the effect of a 133-day supply on Jan. 1 will be worth millions of dollars on 1984's books. The ideal stockpile for a domestic make is a 50-day supply, although the industry average for the subcompact segment—AMC's strong suit—is way above that ideal.

Chrysler Corp.'s rather large increase in its days-supply figure, on the other hand, is due solely to decreased sales; its production stayed steady during the month.

Ford Motor Co. noted its heavy stock of EXP reflects dealer stockpiling in anticipation of Ford's plan to halt production on the model until 1985½. High numbers for Grand Marquis and Crown Victoria also reflect

GM's new baby

Saturn gets an engine

GM unveiled a running prototype of the four-door Saturn sedan, with sheet metal unchanged from the first Saturn announcement more than a year ago. Reversing GM's normal styling procedure, a new body shape is still under development, according to the GM Design Staff. Saturn ultimately will get a more rounded shape.

Domestic sales jump 17 pct., imports set record for 1984

By Jenny L. King
Detroit Reporter

Though the torrid sales pace cooled considerably the last several months of the year, domestic and import auto makers cannot help but regard 1984 as a successful 12 months. It was a record year for many and a very good one for most others.

Domestic sales, with gains every month, arrived at the Dec. 31 finish line with a total that was 17.01 percent ahead of 1983's. The imports sailed to a record total, powered by four record months that included each of those in the final quarter.

Import sales were up 2.41 percent compared with the preceding calendar year and pulled the total industry's advantage down to 13.22 percent from the 17.01 notched by the domestics.

Import penetration continued to shrink, dipping to 23.48 percent from 25.96 percent in 1983, and down from 27.84 percent in 1982.

Totals for the six major U.S. auto makers reached 7,951,517 in 1984, best year for the domestics since the 8,315,622 reported in 1979 and up 17.01 percent from 6,795,302 in 1983. The calendar year record for the industry was etched back in 1973 when 9,669,689 new passenger cars were delivered. Second best was the 9,307,998 reported in 1978.

The import record total of 2,440,258 was up 2.41 percent from 2,382,799 a year earlier and was some 45,000 units ahead of the previous yearly record of 2,395,036 set in 1980.

Grand total for the industry was 10,391,775, up 13.22 percent from 9,178,101 in 1983 and best since 1979 when the final figure was 10,641,099.

Ford Motor Co. reported the largest year-to-year sales gain among the larger U.S. makers with a 25.97-percent increase. Ford sales totaled 1,979,317 in 1984 compared with 1,571,321 the preceding year.

Chrysler Corp.'s 17.27-percent increase was next best, followed by a 13.17-percent gain at General Motors. Chrysler passenger-car sales totaled 986,998 in 1984 compared with 841,622 in 1983. GM's total was 4,587,508 domestics, up from 4,053,561 a year earlier.

Of the smaller makers, Honda had the most spectacular year in 1984, its sales of U.S.-built cars more than doubling to 133,601 from 50,402. American Motors' final number was stunted by its diminishing AMC line, which was down 56.21 percent for the year with Renault Alliance/Encore up just 16.01 percent. AMC reported a grand total of 190,255 units, off 1.60 percent from 193,351 a year earlier.

Volkswagen, which sold more than 170,000 U.S.-built Rabbits in 1980, watched its fortunes continue to sour in 1984. VW sales were down 13.18 percent, to 73,838 from 85,045 in 1983.

GM retained the largest segment of the domestic market in 1984, but its share was down nearly two percentage points in favor of Ford, Chrysler and Honda. GM sales accounted for 57.70 percent, down from 59.65 percent. Ford earned 24.89 percent, up from 23.12 percent; Chrysler claimed 12.41 percent, up from 12.39 percent, and Honda expanded to 1.68 percent from 0.74 percent.

AMC dipped to 2.39 percent of the domestic market from 2.85 percent and VW was down to 0.93 percent from 1.25 percent.

Buick and Oldsmobile announced record sales for 1984, with each division celebrating its second consecutive record year. Buick was

Continued on Page 60, Col. 1

A quick rundown of rising market

U.S. new-car sales for 1984 totaled 10,391,775 and included 7,951,517 domestics and a record 2,440,258 imports. The total was up 13.22 percent from 9,178,101 in 1983, when 6,795,302 domestics and 2,382,799 imports were delivered.

The industry record, set in 1973, was 11,427,478. Best domestics year also was 1973 when sales reached 9,669,689. The previous imports record was 2,395,036 notched in 1980.

Import penetration dropped to 23.48 percent in 1984 from 25.96 percent in 1983. Record penetration was 27.84 percent in 1982.

GM relaxing rules on franchise holding

By Marjorie Sorge
Labor Editor

General Motors dealers will be able to be the dealer-operator of more than one GM dealership within the next month, according to GM President F. James McDonald.

A decision on how many franchises a dealer may hold will be made in the very near future, according to James Vorhes, GM vice president, Customer Sales and Service Staff, and the dealers will be notified immediately.

The change in policy was made so GM dealers can have a franchise for the Saturn and not have to give up their current GM store to get it, Vorhes said. The Saturn car, which will probably be a 1989 model, will likely be sold at a separate facililty and require a separate franchise, according to McDonald.

Currently, GM dealers are allowed to hold one franchise and have as much as 49-percent interest in nine others, after 10 years. The initial investment in a new deal can be up to 85 percent.

Dealers, who expected the policy change, hailed the move. They have been urging the change for years.

"The Chevrolet dealers' council has supported it and brought it forth," said Dan Boone, Dan Boone Chevrolet, Houston, a member of the council. He added he'd like to see GM's policies eased even further.

The strict policy is one reason so many dealers have added an import line, and he partly blames GM's restrictive policy for climbing import penetration.

"If they had done this 15 years ago or so, we'd still have the Big Three instead of the Big Eight," said Boone, who also owns a Mitsubishi dealership.

Greg Sutcliff, Sutcliff Chevrolet, Harrisburg, Pa., said he was encouraged by GM's policy change.

"If a Toyota dealer can hold more than one franchise, there is no reason why a GM dealer cannot, too," he said.

According to Vorhes, the new franchising system will still allow dealers to invest in nine other franchises. The difference will be that they will be able to be the owner/operator of more than one.

"We're looking at Saturn as plus business for General Motors, and we need all the existing franchises that we have, and Chevrolet, Pontiac, Buick, Cadillac and Oldsmobile are going to remain just as strong and stronger," McDonald said.

According to Vorhes, the new franchising system have no effect on current dual deals.

McDonald met with representatives of the GM dealer body and NADA last week to get their input into the criteria needed to assign dealers the Saturn franchises.

"We have not worked out all the details on what a separate franchise is or what a separate agreement is," McDonald said. "but it would probably require separate facilities. We did say the General Motors dealers would be the preferred applicants, that we have not determined the number, we have not determined the timing of appointments, nor have we established the criteria for the selection of those dealers."

While the bulk of the Saturn cars will be going to current GM dealers there will be an opportunity for exclusive Saturn deals, Vorhes said.

"We want a world-class dealer organization selling Saturn," he said. "To sell Saturn you must be the best."

Dealers getting Saturn will likely be required to set up separate facilities, although that has yet to be finalized, Vorhes said. That could include a separate showroom and sales force with a common service area in the existing dealership, he said.

Vorhes said GM expects most dealers will be large enough and financially able to put up a new building to sell Saturn. However, he said GM's Motors Holding Division will be available to dealers who need help.

According to Smith, the Saturn dealers will be selling whatever the corporation produces, but, he said it is possible that Sanchez could negotiate with the BOC Group for example and buy a car from them

There is also a lot of interest in selling the cars in shopping malls, Vorhes said, and GM expects to

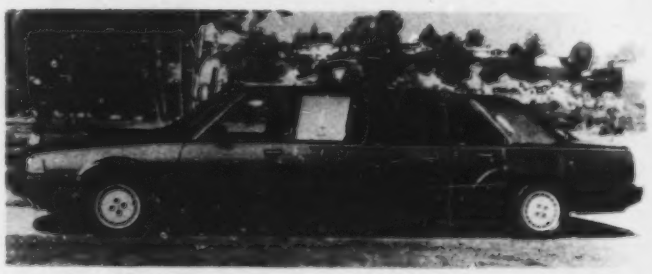
A Toyota prototype, the FX-I, showed up last week at the opening of the Greater Los Angeles Auto Show. It is powered by a twin-turbocharged six and is heavily laden with the latest in electronic technology.

Bitter shows off 4-door

This sedan, Bitter's first four-door, was put on display last week at the Greater Los Angeles Auto Show. The luxury auto was designed and built in Germany.



For Honda honchos

This Honda Accord LX has undergone a 52-inch stretch by Marquis Custom Coach and was on display at the Greater Los Angeles Auto Show. The rear doors have been widened to 49 inches. Amenities include a velour interior, color television, AM/FM tape stereo and an electric moonroof.

Show cars also on stage

L.A. hosts new cars' U.S. debut

By Matt De Lorenzo
Staff Correspondent

LOS ANGELES.—A number of new cars, ranging in price from Toyota's $10,999 MR2 to Rolls-Royce's $185,000 limousine, made their U.S. debut during the Greater Los Angeles Auto Show last week.

Sharing the stage with those two entries were Ferrari's Testarossa, Ford's Aerostar van and Merkur XR4Ti, Bitter's four-door sedan, Oldsmobile's Calais Indy Pace Car and specialty cars such as a 52-inch stretch Honda Accord LX limousine.

Several other show cars were also presented to the U.S. public for the first time.

Toyota displayed its futuristic FX-1 prototype, Ford showed the Ghia-built Vignale Mustang, Chrysler's Pacifica Design presented its A-45 concept vehicle, while AMC-Jeep had two versions of its Wagoneer/Cherokee sport-utility vehicles specially prepared by Molly Design.

The four-door Wagoneer was raised several inches, a new dash with full instrumentation was installed and the vehicle was painted a desert gray with navy blue accent striping.

The two-door Cherokee was presented in a sportier vein, painted in a Ferrari red and equipped with a kid-glove leather interior and Nardi sport steering wheel.

At the AMC-Jeep-Renault stand, Dean Greb, Western sales manager for the company, announced that it was continuing

Chevy dealers miffed by Saturn franchise

By Michelle Krebs
and Jake Kelderman
Of the Automotive News Staff

General Motors' announcement requiring dealers to have a separate franchise to sell its new Saturn model caught dealers by surprise, and it was not a particularly pleasant surprise for Chevrolet dealers who had counted on selling the Saturn.

With GM's announcement last week that it was establishing a new corporation, Saturn Corp., the auto maker said dealers would have to apply for a Saturn franchise and a separate facility would be required.

The details regarding the new franchise remain hazy.

"What we want to do is build a ladder with a clean-sheet approach just like we did with the automobile, the engineering and the manufacturing," said GM Chairman Roger B. Smith. "We want to get the product to the market the way the market wants to be served."

GM President F. James McDonald said GM wanted "new and unique marketing concepts" applied to the Saturn. He added that GM had not determined the number of Saturn dealers to be appointed, the timing of the appointments nor the criteria upon which they would be selected.

"We have not worked out all the details or what a separate franchise is or what a separate agreement is, but it would probably require separate facilities," McDonald said. "We did say the General Motors dealers would be the preferred applicants."

NADA sources indicated that whatever GM does with Saturn in terms of sales and distribution will have repercussions for the entire franchise system.

"When you start with a 'clean sheet,' anything is possible," said a high-ranking NADA officer.

Dealer protection laws protect only existing dealers, the NADA official noted. Since Saturn will be a new corporation, so, too, will be the franchise agreement.

Among the possibilities suggested by other dealer sources was an agreement whereby the title would not transfer to the dealer and pricing authority would remain with the manufacturer. Such an approach, sources said, would allow Saturn to deal with the major complaint consumers have with the car-buying process—negotiation over the price of a car and the "gouging" that goes on with popular models.

Porsche tried a similar approach last year, but was forced to back down, sources said, because it had to work with its existing dealer network. Under Saturn, GM would not have that problem.

Some Chevrolet dealers, particularly those who sell

American Custom Coachworks, Ltd., Beverly Hills, Calif., plans to produce 150-200 Lincoln Touring Limousines which will wholesale to Lincoln dealers for $31,000. Suggested retail price is $41,500.

Sanchez for Saturn —a unanimous choice

By Marjorie Serge
Labor Editor

Joseph J. Sanchez, 54, was the unanimous pick of everybody at General Motors for the job as president of the new Saturn Corp. Roger Smith said so, and he should know.

Sanchez was general manager of Oldsmobile where he developed a good rapport with the UAW on the GM20 project, a skill that will be needed in the new subsidiary where the company and the union are to work as one.

Joseph J. Sanchez

Sanchez was given a lot of latitude in running Oldsmobile, which has set sales records the last two years.

"At the risk of embarrassing Joe, I don't want to tell you all of his superior qualities," Smith said when making the announcement. "But I will say that you should look at where Joe has been, a lot of overseas work down in Uruguay and Brazil where hestruggled with a small independent company and made it grow."

Sanchez, who speaks Spanish, is a native of New York City and received his bachelor's degree from City College of New York. He began his overseas work for GM in 1960 as a field sales representative in Santiago, Chile.

In 1964, he became a zone manager for GM Overseas Distribution Corp., based in Panama. He moved to Caracas as vehicle sales manager of General Motors de Venezuela in 1965 and was named managing director of General Motors Uruguaya in 1968.

He became director of sales for General Motors Argentina in 1972 and was named managing director later that year. He returned to Uruguay in 1974 as regional manager for GMODC, became managing director of General Motors do Brasil in 1976 and was also responsible for GM Uruguaya from 1980 until he went to Oldsmobile in 1983.

He became a GM vice president in 1979 and will retain that title.

Sanchez will be assisted by Reid Rundell, formerly executive director of the Saturn project, who will now be executive vice president for strategic business planning at Saturn Corp.

There are also four Saturn vice presidents:

John Middlebrook, vice president for sales, service and marketing.

Tom Manoff, vice president, finance.

Jay Wetzel, vice president, engineering.

Guy Briggs, vice president, manufacturing operations.

"I am excited about this because it is a chance to do it differently," Sanchez said. "I don't want to say if we fail, everybody does because somebody else can maybe do it better. But you have to admit that this is the correct way of approaching a problem. Set it up separately so you can clearly define responsibility.

"If we go under, you have got one minority member here who is going to retire early. If I retire at 57, you'll know I'm in trouble."

$60 million to $100 million predicted

Huge ad budget seen for Saturn

By Joseph Bohn
Marketing Editor

WARREN, Mich.—General Motors' new Saturn car line will ultimately compete with Chevrolet and Pontiac small cars, but the effort is geared to plus business.

GM is looking for at least 45 percent of the small-car market, and more than the million small-car sales frequently described as its goal.

And its creation of the new Saturn Corp. subsidiary to build and market a new line of two-door and four-door models and other future lines will create a $60 million to $100 million advertising plum, media experts say.

Saturn's relationship with its agency (when chosen) is tied in with a current GM-McKinsey & Co. study on improving ad efficiency, a study that will have an effect on other GM divisional agency relationships as well.

These are just a few of the marketing ramifications of Saturn, GM's effort to build and market domestic small cars that are fully competitive with Japanese autos from a cost and quality standpoint.

Lloyd E. Reuss, group executive of the Chevrolet-Pontiac-GM of Canada Group, said none of the forward products planned for Chevrolet and Pontiac over the next five years have been trimmed as a result of Saturn.

"We have to provide products for the Chevrolet dealer body that cover the entire market and it's the same at Pontiac," Reuss said. "Not all Chevrolet and Pontiac dealers will be handling Saturn, so we have to make sure Chevrolet and Pontiac have strong products independent of Saturn.

Reuss stopped short of pinpointing where Saturn would fit in the small-car pricing lineup, saying that was for Saturn President Joseph Sanchez and his staff to determine. But indications are that the Saturn cars will fit just above the lowest-priced Chevrolet imports.

GM Chairman Roger B.Smith said he "expect(ed) Sprint will remain our least-expensive car." He added that the Saturn line will consist of very roomy four-passenger cars, a cut above the cramped entry-price level models of the subcompact field.

Reuss noted that GM wouldn't be making the kind of investment it is in Saturn if it's goal were not "plus business."

"We're going after higher penetration in the smaller end of the market and the 35-year-old age group. We're getting only 30 percent of the small-car market and there's no reason we can't get 45 percent of the entry-level" buyers, Reuss added.

Reuss said he "wasn't stuck" on the million-unit small-car number which reporters seemed to feel was GM's overall small-car sales goal, but that Saturn was simply coming on top of everything else that had been planned.

John Middlebrook, Saturn vice president of sales, service and marketing, said he wouldn't rule out any of the current GM ad agencies as potential contenders for the Saturn account.

"Obviously, nothing is ruled out," he said."But it will be well down the road before we get into that kind of program. We have a lot of work to do and a lot of marketing studies" before coming to agency considerations.

Detroit media experts say GM will have to spend heavily in the beginning to launch Saturn—not only because it is a new entity, with little consumer awareness, but also to build its credibility as a small-car marketer.

They feel that Chevrolet's reputation as a subcompact car marketer, for example, hasn't been all that good.

"They'll have to spend between $150 and $200 per unit" in advertising, said a longtime media expert. "That's kind of high for GM" which typically spends

Nancy's gift to Ronnie is a Ford Ranger

WASHINGTON.—Nancy Reagan's belated Christmas present to her husband, President Ronald Reagan, is a canyon red Ford Ranger 4x4.

The dealer was Jim Click, Irvine, Calif. No special arrangements were made by Ford Motor Co. for the long-bed truck which has a 2.8-liter engine, AM/FM stereo and a 5-speed manual transmission.

A massive voice-and-data communications system

EDS eying GM 'phone company'

By Dan McCosh
Detroit Reporter

EDS Corp., General Motors' recently acquired data-processing subsidiary, is working on a massive voice-and-data communications system that one insider dubs "GM's own phone company."

It is expected to displace a significant portion of the auto maker's current commercially leased communications services.

GM previously indicated it would utilize EDS to build an integrated, companywide data-processing system to bring harmony to GM's internal data communications that have been developed by various departments through the years.

The comprehensive program now being developed by EDS includes voice, data and video communication links, according to EDS Senior Vice President Kenneth G. Riedlinger, who is in charge of the program.

GM expects to utilize about one-half of the comprehensive new system. The remainder will be used internally by EDS and other portions will be made available to outside customers.

"It's not budgeted at anything, but $500 million would be a starting point," Riedlinger said. Communications analysts say the investment would rank the system among the largest such private networks developed so far.

The emphasis at EDS on developing communications lines, going well beyond organizing GM's data-processing departments, is a logical next step, Riedlinger said. "Half of the task is how to get information from one one place to another in the most effective way," he said.

"I wouldn't call it a phone company—it's more data than voice," Riedlinger said. He also distinguished the EDS system from so-called "bypass" telephone systems being adopted by some major corporations that directly link a company to long-distance lines without using local phone companies—although voice communication would be an integral part of the system.

For EDS, Riedlinger envisions a complex mixture of communications lines, including satellite, land lines, microwave, coaxial cable and fiber optics. The system is being designed from scratch by EDS, but some portions be purchased outright and others will be leased from outside sources.

"There are a lot of people building pipes out there without any water in them," Riedlinger said.

By developing its own multipurpose internal communications network, GM is following a trend

ECONOMIC FORECAST '85

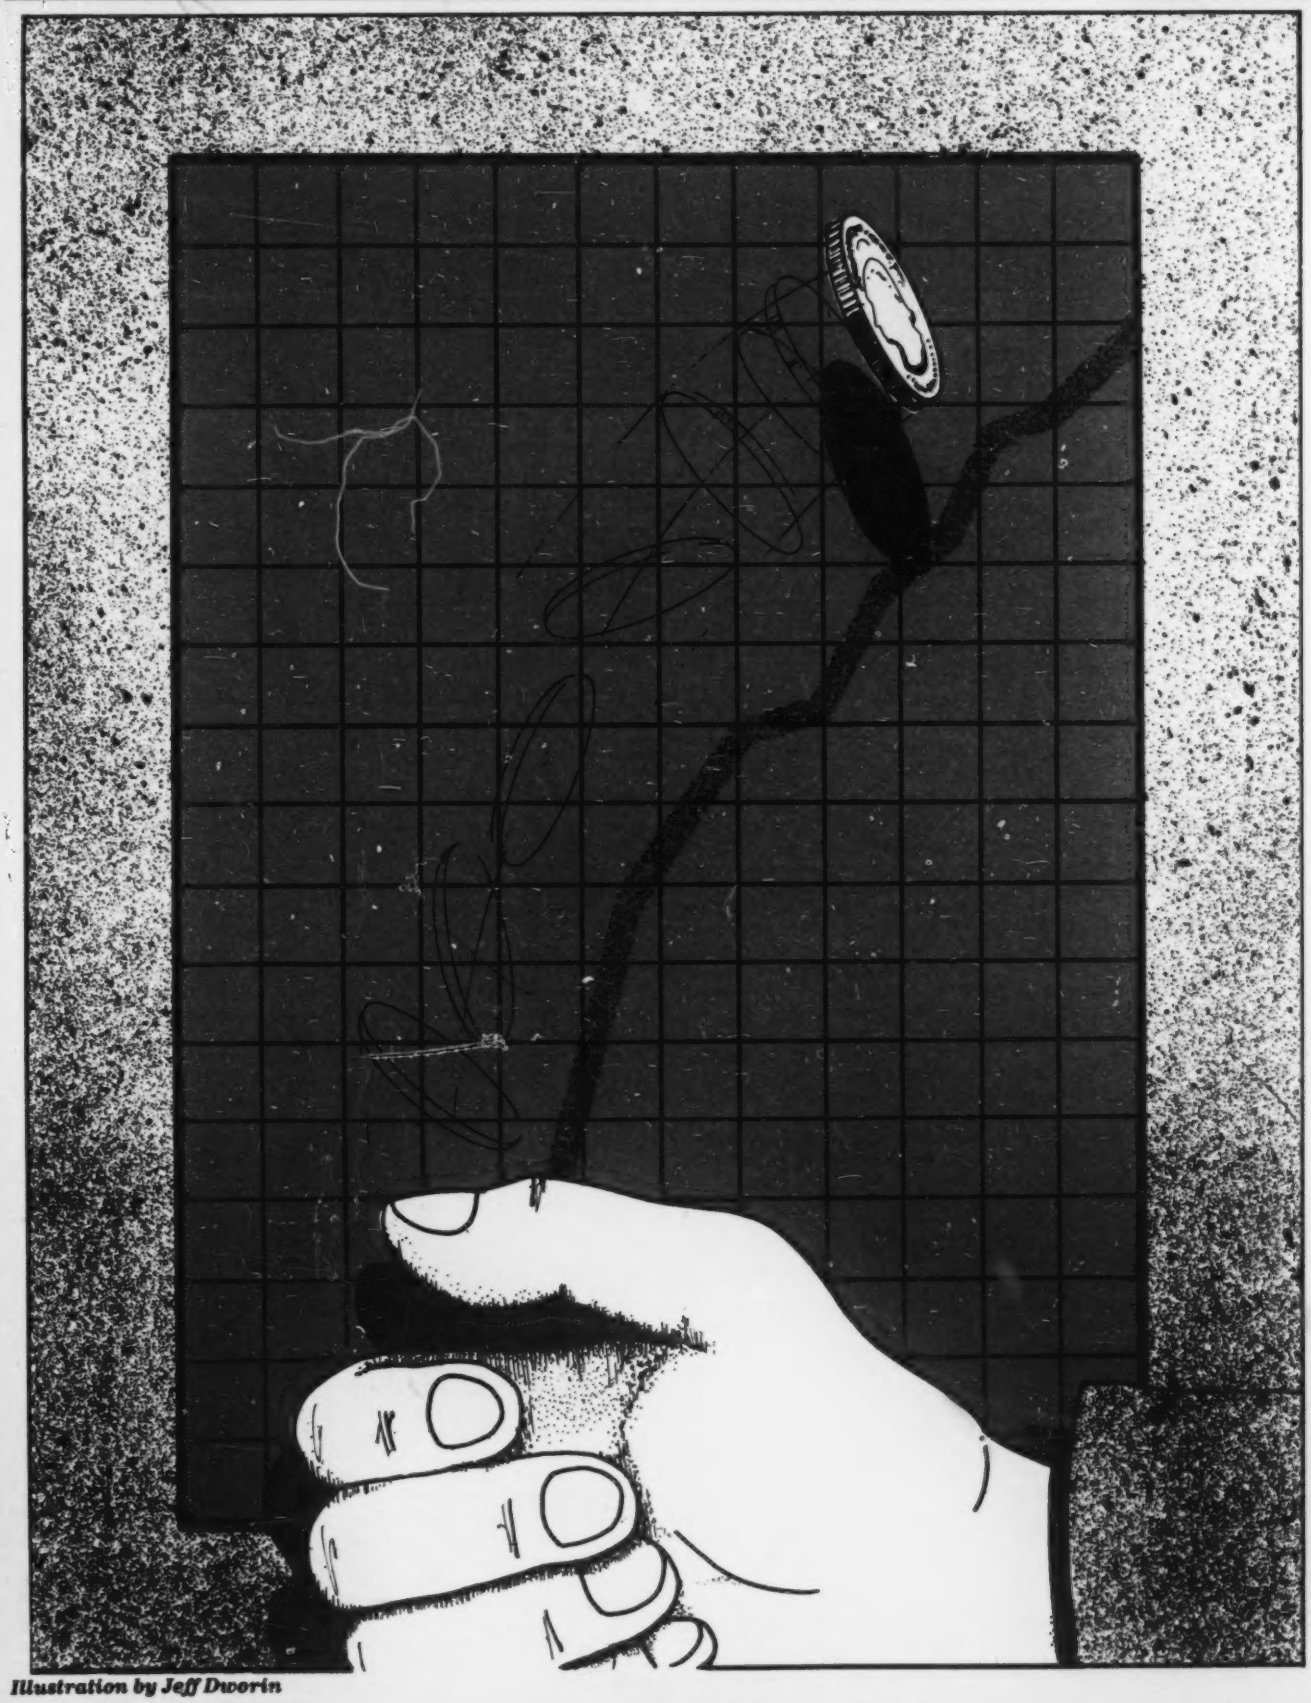

Illustration by Jeff Dworin

When is the boom ending? It's a toss-up

By Michelle Krebs
Financial Editor

Chief economists for the Big Three auto companies predict 1985 will be another good year for the auto industry and the U.S. economy in general, but prosperous years beyond this one hinge on progress being made in reducing the federal deficit.

General Motors expects 1985 sales to exceed last year's by as much as a half million units. Ford Motor Co. anticipates vehicle sales will be the same or somewhat better than in 1984. Chrysler Corp. predicts they will be the same.

GM is the most optimistic about sales. Total motor vehicle sales will be 15 million this year, GM says. That would make it the second best calendar year in U.S. automotive history and would mark only the second time the 15-million unit barrier was broken. Of the 15 million units, 10.7 million passenger cars and 4.3 million trucks will be sold, according to GM's forecast.

Ford expects 1985 sales may be slightly higher at 14.7 million total units, of which 10.5 million will be passenger cars and 4.2 million will be trucks.

Chrysler sees the same total number as 1984 at 14.5 million, though the mix will be slightly different. Chrysler's forecast for 1985 shows sales of 10.5 million passenger cars and 4.0 trucks compared with 10.3 million cars and 4.2 trucks last year.

Chrysler corporate economist Donald P. Hilty notes that day supply of cars has been running 15 to 18 percent below normal, but he expects that to change this year as U.S. production gears up and import restraints on Japanese automobiles are lifted or liberalized in the spring. In addition, no strikes such as those by U.S. and Canadian UAW members against GM last fall, which cut into third-quarter production, are expected.

Because of supply constraints, Hilty says emphasis was placed on trucks in 1984 and incentives were offered. He anticipates incentives will be off this year and truer demand for cars, at 10.5 million units for the year, will be represented. In addition, he maintains strong pent-up demand from the recession has not been absorbed, and postponed purchases will spill over into 1985.

All three auto company econo-

mists see the U.S. economy continuing to grow but at a significantly lower rate than in 1984. The gross national product (GNP) is expected, by all three economists, to be three percent or less in 1985. Growth will be slow in the first half of this year, picking up in the second half, they predict.

"The U.S. economy will have another year of expansion typical in this year of recovery, but at a significantly lower rate of growth, particularly compared to growth in the first half of last year," says Marina v.N. Whitman, GM chief economist. "No one expected that kind of growth to be sustained."

An economic slowdown isn't necessarily bad. As many predicted would happen in 1984—but didn't happen—continuous breakneck growth would supposedly refuel inflation, trigger higher interest rates and ultimately prompt a recession, which would be more severe than a recession in a more stable economy.

Whitman says 1985 "will be a more sustainable pattern." She adds that growth will pick up after the first quarter.

"Overall, we expect the economy to grow more slowly, but car sales to be about the same or even a little better," says John Deaver, chief economist and economics director at Ford. "We're coming off a period of rapid growth, and the improvement in sales in the year are the results of earlier years. The lag effect is from the rapid growth in 1983 and early 1984.

"But the momentum will carry over to 1985," he adds, noting 1984 car sales were depressed by 200,000 to 300,000 units because of capacity constraints and production interruptions created by the GM strikes.

Ford's forecast shows no capacity constraints this year, with the economy weakening. Deaver says GNP will be at the 1.5 to three percent rate. Growth in the first half will be slow at one to two percent, picking up in the second half at two to four percent. The slow first half is a carryover from the second half of 1984.

"We are in the middle of a mini-inventory cycle that should be finished and reversed by mid-1985," Ford's Deaver says."We are undergoing, and have been since last summer, an enormous slowdown relating to inventories." The result has been slower retail sales and a build-up in inventories. Retailers have cut back orders, but inventories still have not declined because, as production has been cut back, so has consumer employment, he says.

"When inventories adjust to normal levels and with the lower interest rates we expect to continue, it will set the stage for better growth," Deaver adds. "At that time, investment in inventory will resume and consumer confidence will build."

Hilty sees the slow third quarter in 1984 as a "fluke," prompted by the GM strike and U.S. tourists traveling abroad because of the strong dollar. Those tourists spent their money on travel rather than on durable goods, Hilty theorizes. He forecasts another good year in 1985 with continued improvement in business conditions.

According to all three economists, inflation will be held in check, helping business conditions. As measured by the Consumer Price Index, inflation should be five percent or under after coming in at about 4.5 percent for 1984, they believe. "We don't expect inflation to misbehave," GM's Whitman says.

She expects there may be further softening of energy prices in the first half, and any increase in consumer prices will be modest.

All three see interest rates dipping again in 1985. The prime rate closed the year at 10.75 percent, after dropping one-fourth point in December.

"Interest rates will remain at quite a low rate through the first quarter as the growth rate remains low," Whitman says. "Interest rates may see some further decline for the near-term, but at some point in 1985 there will be some upward movement, probably by the end of the first half, as the growth rate picks up after the first quarter."

Ford's forecast is similar, placing the increase nearer year-end. However, Deaver says rates at the end of 1985 will be no higher than rates at the end of 1984.

Chrysler's forecast for interest rates is similar.

On the negative side, no one sees progress being made in unemployment. No change in the unemployment rate is included in any of the forecasts.

Also, the U.S. dollar is expected to remain strong. Whitman and Deaver are cautious but hopeful that some depreciation will occur in 1985. The strong dollar has made the U.S. favorable for imports—particularly European prestige-car builders—placing domestic auto companies at a competitive pricing disadvantage.

Deaver's forecast calls for a modest dollar decline, though he isn't counting on it and wouldn't be surprised if it became stronger. GM's forecast indicates no more appreciation and perhaps the beginning signs of depreciation. Chrysler anticipates it will continue at the same strong levels.

Whitman says the U.S. must set a goal of reducing its trade deficit, which she predicts will be somewhat higher this year than last. Despite the negative elements, the continued strong economic factors translate into high consumer confidence, which was running at record levels during 1984.

"Consumer sentiment should remain strong," says Whitman. "The consumer now is in good shape and sees himself as such. We have some decline from the peak levels of 1984, but disposable income and consumer debt are at good levels and are perceived as such."

Chrysler's Hilty notes personal disposable income, which he sees rising five percent during the year, should heighten consumer optimism.

Whitman adds: "If the economy behaves as we execpt it to, with growth slow in the first quarter and starting up in the second and inflation under control, the consumer should continue to respond positively."

The consumer, she says, doesn't worry about the federal deficit, but rather is concerned with the response of the credit markets. The credit markets do respond to actions—or the lack thereof—taken in reducing the federal deficit. The markets have been relatively stable, anticipating more action will be taken.

Hilty says that of the 10 leading indicators he watches for the auto industry, seven have green lights, only two signal red and one blinks yellow caution. The red signal flashes over work-week length and, subsequently, over the unemployment indicator.

"The work week is the shortest length it has been in sometime," Hilty says, noting that a lower work-week reflects cutbacks in overtime which cause a dip in disposable personal income over the long run and may trigger unemployment. In fact, he says, unemployment has been edging upward.

The sign for the stock market, green until recently, now has

Continued on Page E-4

Toss-up

Continued from Page E-2

turned yellow, Hilty says. Though the stock market decline appears to have bottomed out, the market is remaining cautious about progress on the federal deficit, he believes.

All three auto company economists say they will monitor what happens regarding the deficit, and they express concern about progress being made in 1985.

"If progress is not made by the end of 1985, the effects will be felt in 1986," says Whitman. While she remains hopeful something will be done, shestresses the need for action is critical.

"I just hope in the process of tax reform and deficit reduction, they won't lose sight of the spending side," she says, adding that Treasury Secretary Donald Regan's tax reform proposal is worthy of serious consideration.

"In '85 we will be watching what is done on taxes, but anything that happens in 1985 is not expected to affect car sales volumes," says Deaver. "There is not much beyond what's already in the works that will affect car and truck sales. Monetary policy changes and new efforts to reduce the deficit will be important to sales in 1986 and after."

Chrysler's Hilty will watch for status changes in the economic indicators he uses for the auto industry. The key indicators, he says, will be consumer attitudes and interest rates, both of which are tied to the federal deficit and the trade deficit.

"Interest rates will reflect the concern for the federal deficit and the trade deficit," he says. "We expect to see nothing done in the first half of 1985. We expect no change in the structure of tax rates, no change in the tax laws by the end of the year, though we may see some change in federal spending."

Just how good will 1985 be?

Vehicle sales forecasts differ by up to 1.5 million units

By Michelle Krebs
Financial Editor

Analysts are forecasting another good sales year for the auto industry in 1985, though there is great divergence of opinion concerning just how good it will be.

Analysts from forecasting firms, brokerage houses and banks surveyed by Automotive News collectively were almost on the nose in assessing sales for calendar 1984. Their composite forecast for the year put total vehicle sales at 14.5 million units including 10.6 million cars and 3.9 million trucks. The analysts' individual forecasts were within 700,000 units of each other for last year.

Analysts agreed 1984 sales figures could have been even better had it not been for capacity constraints of domestic auto companies, production interruptions caused by strikes against General Motors and import restraints on Japanese automobiles.

However, forecasts for total motor vehicle sales in 1985 vary by as much as 1.5 million units. Predictions range from a low of 14.0 million total vehicles to a high of 15.5 million.

Generally, analyst forecasts for the overall economy in 1985 include: strong growth but at a slower pace than 1984—perhaps three to 3.5 percent gross national product; a drop in interest rates followed by an upswing by the middle or end of the year; stable and perhaps even declining gasoline prices; and continued lower inflation.

They do not agree on directions of unemployment and disposable personal income. Some say unemployment may rise, others say it will drop, and most expect it to remain unchanged from 1984. Disposable personal income, a key factor in auto sales, will grow significantly, some say, while others see a decline.

As for 1985 vehicle sales, Arvid Jouppi, of Arvid Jouppi Associates, Detroit, is the most optimistic of those surveyed by Automotive News. He forecasts total vehicle sales of 15.5 million units this year. Car sales will be 12.0 million units and trucks will be at 3.5 million, he says.

Jouppi's forecast also shows the lowest share for imports at 2.5 million units, giving domestic makers sales of 9.5 million. The other analysts expect imports to rise from 1984's 2.4 million units to 2.7 million or 2.8 million units. They expect voluntary import restraints to be lifted or liberalized, but Japanese auto makers to show self-restraint in the number of cars they ship to the U.S.

Jouppi's forecast is based largely on the aging of the U.S. fleet, increased demand for lower-priced cars, and a shortage of late-model used cars for replacement vehicles or lower-priced alternatives to new cars. "We are optimistic," Jouppi says. "We feel the auto industry has a makeup job to do."

Jouppi's overall economic forecast is positive—growth but at a slower pace, low inflation, stable interest rates, wages which have held the line, and only moderate increases in car prices.

At the other end of the spectrum is Thomas O'Grady of Chase Econometrics. He looks for total vehicle sales to be 14.0 million units for the year with 10.3 million cars (imports taking 2.7 million) and trucks at 3.7 million.

"There are some things going on in the economy that need to be looked at more closely," he says. "The weakening of the economy in the third quarter has been written off by some as caused by the GM strikes, but actually it started in late summer, before the strikes. Then the continued weakness through the third quarter was explained away, and now those people are jubilant at the increase in sales. But you have to look at details."

Among the details are plentiful inventory supplies of some models. "If sales are so strong (and production schedules have been cut, in some cases), why are inventories staying the same?" he asks.

Some of those underlying factors which caused the economy to weaken in 1984 may spill over to 1985, so O'Grady remains cautious about the economy and conservative about vehicle sales.

Mary Ann Keller, a director of Vilas-Fischer Associates Inc., also remains cautious, placing total vehicle sales at 14.1 million units. "The first half should be reasonably good. There are some signs of interest rates coming down," she says. "But it's difficult to figure the second half. It will depend on Federal Reserve Board policy (regarding money supply). It's possible it will be a replica of 1984 with a good first half and slower second half."

Pressure on interest rates may be prompted later in the year by increases in consumer installment debt, the U.S. Treasury's financing of the deficit and borrowing

FINANCING

Wheelways offers you a fresh new alternative to financing Rental Cars, Customer Loaners, Demonstrators, or Salesmen's Cars.

You Can Finance Just About Any Kind of Car.

New American or Foreign made cars and light trucks qualify for financing—PLUS used cars up to three years old.

It's Easy to Qualify

The best thing about the Wheelways Finance Program is that any Auto Dealer or Rent-A-Car Company can participate. The only prerequisites are that you've been in business for two or more years, are credit worthy, and you plan to finance at least ten vehicles with us.

So call or write today for the name of your local Wheelways Agent or for more information on how our financial services can help your business.

Tell me more about Wheelways Finance Program

Name_____

Company Name_____

Address_____

City_____ State_____ Zip_____

Phone (Area Code)_____

Mail to: WHEELWAYS, 259 East Lancaster Avenue, Wynnewood, PA 19096-1993

There are Five Big Advantages with Wheelways Financing

1. You gain access to an alternative financing source.
2. You pick up an additional credit line for more business opportunities.
3. Fixed Interest Rates.
4. There's no system fees to pay.
5. Insurance is included on each vehicle for Collision, Comp and Conversion plus five million dollars of liability.

INCREASE YOUR PROFITS

WHEELWAYS® finance program

Struggling for output supremacy

U.S. and Japan face close rivalry throughout decade

By Michelle Krebs
Financial Editor

The race between the U.S. and Japan for the title of world's largest automobile producer will be neck-and-neck through the rest of the decade, according to the latest Automotive News World Outlook.

The quarterly service of Automotive News and Data Resources Inc. indicates car production in Japan will reach 8.2 million units by 1990 while U.S. production will run in the 8.1 to 8.2 million-unit range.

By 1990 the U.S., Canada and Mexico combined will produce nearly 9.2 million cars annually, and most production in Canada and Mexico will be by U.S. auto makers.

At the same time, vehicles produced in the U.S. will be of a different sort from the past, not necessarily having their origins in North America. By the next decade, one million vehicles a year in the U.S. will be produced by Japanese companies.

Nearly 40 percent of the overseas capacity of Japanese companies will be in the U.S., according to Automotive News World Outlook. Those numbers are based on present plans and could be higher if speculation regarding other plans become reality.

So far, definite plans for U.S. production have been announced by Japan's four major auto companies—Toyota, Nissan, Honda and Mazda.

Mazda was the latest to announce it will assemble cars in the U.S. The auto maker plans to spend $450 million to renovate an abandoned Ford Motor Co. facility in Flat Rock, Mich., near Detroit. Production begins in the fall of 1987 with initial capacity of 240,000 units annually.

Honda, which builds the Accord model in Marysville, O., plans to add a line for Civics. Capacity will double to 300,000 cars annually. Nissan plans to add its Sentra car line to its Smyrna, Tenn. plant, where it now builds only trucks.

The General Motors-Toyota venture in Fremont, Calif. is expected to produce 250,000 cars annually.

The Japanese companies' U.S. capacity may exceed one million units if others follow suit. Mitsubishi is expected to be next to announce a U.S. plan. In fact, Mitsubishi president Toyoo Tate said potential plant sites have been narrowed to four states—Illinois, Indiana, Kentucky and Ohio.

"Mitsubishi has to do something based on its sales growth projections," says John Hammond, DRI's U.S.-based economist. "It makes sense to do it here."

Imports to the U.S. also will come from South Korea, though in small numbers, through GM's venture with Daewoo Motor Co. Ltd. (the products will be marketed through Pontiac), and as Hyundai attempts to crack the U.S. market.

Hammond concludes the imports' U.S. market share will be 30 percent by 1990—40 percent if Japanese production in the U.S. is included with imports.

For the short term, the U.S., which will continue to grow in 1985 but at a slower pace than in 1984, will be the bright spot in the global economy. Automotive News World Outlook shows a decline in motor vehicle demand outside of North America.

Production constraints and voluntary restraints on Japanese imports to the U.S. kept overall sales from climbing even higher. Automotive News World Outlook shows an overhang of unsatisified demand from those constraints until the economy dips into a recession the second half of the year.

"Year 1985 will be generally more positive," says John Lawson, London-based economist for DRI. "The recovery will be continuing without major interruptions (such as last summer's six-week metalworkers strike in West Germany). Prospects for tax reduction should help, and the French market, which was a disaster in 1984, shows some possibility of growth." Most Western European markets will be close to 1984 sales levels, he adds.

However, one major cloud of uncertainity could throw all of Europe off track; that is West Germany, where drastic pollution control legislation is being contemplated. The mere uncertainity of what form the legislation will take has had a negative impact on car sales. "The consumer doesn't know what sort of car to buy," says Lawson. Car sales this year will depend on the West German budget deficit and tax policy."

John Maher, economist with Citicorp., says attention should be paid to vehicle production schedules. The schedules, he notes, are strong in the first quarter at an annual rate of nine million units. However, he expects production for the year to be only eight million units, so schedules after the first quarter will have to be cut.

On the more optimistic side, David Healy, of Drexel Burnham Lambert, sees strong economic behavior aiding car sales. His forecast includes a three percent increase in real disposable income and a drop in the unemployment rate, as well as auto credit at reasonable rates. (Federal Reserve Board data show consumers paid an average 14.68 percent on an auto loan in August, up only slightly from the 13.92 percent at the end of 1983.)

Philip K. Fricke, auto analyst for Goldman Sachs, also sees the economics of new-car demand remaining favorable, including available credit. Income will rise faster than car prices, he says, and consumer confidence will remain high. He sees no compelling reason to expect deterioration in consumer optimism for at least six months to a year.

In addition, Fricke notes the percentage of household income spent on monthly car payments is unchanged from levels paid in similar economic cycles of the past. Consumers spend an average of 10.0 to 10.6 percent of their household income on monthly new car payments.

Fricke divides American car buyers into two groups: consumers and nonconsumers; the latter includes fleets as well as business and commercial buyers. He notes key factors for consumer purchases are disposable income, consumer sentiment and cost including financing. Nonconsumer demand is a function of overall economic conditions and corporate cash flow. His forecast shows demand by both groups picked up in 1984 with consumer deliveries accounting for about 6.8 million units (below the previous peak of 7.7 million) and nonconsumer about 3.7 million units, somewhat higher.

He forecasts,"For 1985 we estimate a pickup in consumer purchases to 7.2 million units, and nonconsumer purchases to be about flat with 1984."

Harvey Heinbach, of Merrill Lynch Pierce Fenner & Smith Inc., has upgraded his 1985 sales forecast since last fall because of supply constraints in 1984. He feels unsatisfied car demand will spill over from last year. He expects some bumpy spots in the overall economy including favorable conditions for the consumer, such as a drop in unemployment, but with considerably slower growth in disposable personal income.

"The year will be flattish compared to 1984 but basically will be a good year," he says.

government clearing up the picture on emission control.

Whatever the outcome in West Germany, Lawson predicts another tough year for Europe's auto companies, which collectively have lost money for five consecutive years.

Lawson foresees another year of losses that may well exceed 1984's estimated $1 billion loss.

Lawson sees no letup in competition in the market which will grow at a rate of only one-half percent per year through 1990, according to Automotive News World Outlook. The five major companies of Europe show market share within one to two percent of each other.

At the same time, Western European auto companies continue to be saddled with huge capital spending expenses for product development. However, no price increases, which Lawson claims are desperately needed, are in sight.

"Can everyone stay in there? For some, you must have some doubts," Lawson says.

For 1985 Lawson estimates the industry, which already has seen massive layoffs, will shed another 250,000 workers, adding to Western Europe's stubbornly chronic unemployment problem. "With lower revenue growth, action has to be taken on the cost front," he says.

One answer may be for European auto makers to look beyond their homeland and to outsource or to import cars from developing nations, as U.S. manufacturers have done to reduce costs. "We can see doubling or tripling of that by the end of decade," Law-

Continued on Page E-12

How good

Continued from Page E-4

by corporations for capital spending. "Those are the ingredients for higher interest rates and that by itself could make for a stronger first half and slower second," Keller says. "Whatever, we don't see a nice smooth upward growth, but, instead, being wobbly from quarter to quarter."

Keller says the major issue clouding the picture is what Congress will do on the deficit and tax reform proposals, including Treasury Secretary Donald Regan's proposal which would no longer allow write-offs of interest paid on such items as car loans. "The consumer will have to take a very hard look at himself and his financial situation in terms of the tax bill. The consumer may take a wait-and-see attitude on spending," she speculates.

The tax bill debate may cause "temporary turmoil" and negatively effect car sales, Keller says, and "1986 could be a horror story and will be determined by Congress and what it does on the

The shoot-out in wild Western Europe

Future of the continent's vehicle manufacturers is at stake

By Michelle Krebs
Financial Editor

Concern continues to mount over economic and industrial problems facing Western Europe, and in no place in the economy are those problems more evident, or in need of attention, than in the motor vehicle industry. Indeed, the future of some European auto companies is at stake.

Collectively, Western European auto companies have lost money five straight years. Losses for 1984, yet to be reported, are expected to top $1 billion, and the losing trend won't be reversed in 1985. This gives rise to the question of whether all the European companies will still exist by the end of the decade.

European economists predict the economy in 1985 will be slightly more positive at best, and more likely will be a repeat of 1984.

"Economic Forecasts: A Worldwide Survey," which uses a consensus of European economists' forecasts, shows little change from 1984 to 1985 for the major European nations.

Inflation in the United Kingdom is expected to stay just under 5.0 percent and unemployment will rise to 3.1 million people. An increase in growth will be only marginal, from 2.4 percent to 2.8 percent, according to the forecast.

Likewise, West Germany's inflation and unemployment will remain unchanged, while growth will decline from 2.5 percent to 1.8 percent.

In France, the forecast expects inflation to drop, and unemployment and growth to hold steady.

Italy's growth rate will remain the same, unemployment will edge upward from its already high 10.3 percent to 10.5 percent, and inflation will drop from 11 percent to 9.4 percent, according to the forecast.

A survey of British economists, conducted by the Society of Business Economists, indicates similar results for the Britsh economy, with growth at a slower pace accompanied by higher inflation and more unemployment.

Two-thirds of the 144 economists surveyed expect real, or inflation-adjusted gross domestic product, to grow between 2.0 and 3.0 percent. The British government predicts 3.5 percent growth. The majority surveyed forecast retail inflation to rise between 5.1 and 7.0 percent, compared with the British government's estimate of 5.0 percent. Jobless ranks will rise as much as 250,000 from about three million, according to the economists, while the government predicts unemployment and inflation will decline.

Even the British public is becoming more pessimistic about the economic outlook. A public opinion poll done by Market & Opinion Research International in 1982 showed British people thought general economic conditions would improve. However, the same survey taken in 1984 showed the public thinks economic conditions will worsen, particularly because of the lengthy coalminer strike.

Likewise, only modest improvements in the motor vehicle business are anticipated. Automotive News World Outlook, a quarterly forecasting service of Automotive News and Data Resources Inc. (DRI), shows 1985 car sales will rise to 10.39 million units in the nations of Western Europe from last year's 10.24 million units. Auto makers will see no let up in product competition and no relief in price pressure.

The consumer, who so far has not been active in the European economic recovery, may make some contribution in 1985. Tax-cutting packages in Britain and West Germany, as well as delayed upswings in France and Italy, should help support car demand into 1986.

However, increases for the rest of the decade amount to only 0.5 percent per year, and the profit picture could deteriorate further as prospective action on exhaust emission regulation further burdens the revenue side while adding capital and engineering expenses to the cost side.

"Only a rapid revival of volumes, perhaps taking the market rapidly to 11.5 or 12 million cars in Western Europe (which is not predicted), could restore equilibrium," DRI's report concludes. "Otherwise, governments and shareholders will have to meet the costs of adjustment or witness a contraction of the manufacturing base."

The situation in West Germany best illustrates the situation. It's clear the question of emission control standards being considered by the government cooled automobile sales in 1984 by its mere uncertainity. The consumer simply didn't know what kind of car to buy. This year could see a repeat of that uncertainty.

The best guess for 1985 is that European countries, contemplating a united action regarding pollution control, probably won't make a decision before the end of the year. The West German government then must decide if it should move ahead independently of the other countries, in which case car makers would have to decide to invest in product development to fit West Germany's timetable or wait for the rest of Europe. Waiting in the wings are Japanese auto makers, whose cars already have pollution controls.

Likewise, the Western European truck business, which last year experienced its lowest production in decades, continues to face major challenges, mainly in the form of high production costs and exports. Exports, once the backbone of the Western European truck industry, have been cut nearly in half from recent peaks. To take back some of the business it lost, Western European manufacturers may have to increase the assembly of trucks in markets where they are sold.

Marina v.N. Whitman, chief economist for General Motors, forecasts some pickup in European growth, "but not enough to make a dent in the unemployment problem, which is higher and more stubborn than here."

For the automobile industry this year, Whitman expects some improvement because tough problems, such as the West German metalworkers strike, are out of the way; and policy issues, such as West Germany's emission control legislation, whose uncertainty has had a negative impact on car sales, should be resolved.

The only car companies making profits in Europe are producers of luxury, prestige cars. They have taken advantage of the strong U.S. dollar and record high demand for their vehicles in the U.S. A slowdown in the U.S. economy could slow those profits.

Whitman would like to see a move toward a more domestically based expansion of Western Europe's auto business: "I hope we see some shift in growth pattern, which has been export-led by the rapid expansion in the U.S. (and favorable exchange rates). It's not reasonable to expect the U.S. to continue to act as a loan locomotive to growth."

John Deaver, economist for Ford Motor Co., expects a repeat of 1984. His forecast calls for growth in the UK of 2.0 to 2.5 percent; 2.5 percent for West Germany and Italy; and 2.0 percent for France. "Car demand could be a little better, but probably it will be very much like 1934," he says. "A great deal will depend on the U.S. economy. They are not immune from the effect of a slowdown in the U.S. economy, and it would weaken our import demand from these countries."

John Lawson, London-based economist for DRI, sees little change in the level of Western Europe's car exports to the U.S., and instead expects them to increase their shares. However, he anticipates more action on the cost front of the motor vehicle business.

Lawson predicts Western European auto companies may speed up outsourcing of component manufacturing to recover profits. He sees a doubling or tripling of the import of fully assembled vehicles from subsidiaries in developing parts of the world. He also anticipates more layoffs in the auto industry—as many as 250,000 more—adding to Europe's already high unemployment rate.

Heinrich von Moltke, cabinet chief responsible for internal market and industrial affairs for the Commission of the European Community, calls unemployment Western Europe's most severe challenge. "Our main problem is unemployment, which is now at 11 percent, largely due to a slowness of our economy to adjust to the changing pattern of international competition," von Moltke said in a teleconference panel discussion on the European economic outlook sponsored by Touche-Ross International. "The rigidities of old Europe are preventing the new Europe from emerging."

He said the rigidities, particularly evident in the motor vehicle industry, take three forms: labor's short-sighted demands instead of long-term solutions; too much regulation; and lack of investment capital for high technology.

"The labor markets have been ossified by the search for short-term securities at the expense of long-term prosperity," he said. "We spend perhaps more time in negotiating Christmas bonuses or demarcating workers' obligations, and far too little time enhancing the mobility of the work force, training the work force, or work creation.

"We do not possess markets for risk capital which are flexible enough for businessmen to seize the various opportunities for innovation," he said.

Sir James Ball, co-author of "Towards European Economic Recovery in the 1980s," said during the teleconference discussion that European industry did not make the proper adjustments to retain profitability or make investments needed to maintain jobs.

"That has been reflected in the rather sad history of the (European) Community," said Ball, economics professor of the London Business School and chairman of Legal and General Group, one of Britain's largest insurance companies. He noted from 1974 and into the 1980s, 15 million jobs were created in the U.S., three million in Japan and none in the European Community.

The study by Ball and Michel Albert, former commissioner for the French Economic Plan, was commissioned by the European Parliament, and concluded Western European nations have sacrificed the future for the present by spending on consumption rather than investing in the future. It further noted Europe was slow to react to the energy crisis of the 1970s and subsequent need to accelerate investment in high-tech, energy and labor-saving enterprises.

Economists, businessmen and government officials agree Western Europe is undergoing profound economic change. Yet they do not necessarily agree on the cure for those economic ills nor on how quickly prescriptions for the cure should come forward.

One point on which many seem to agree is that Western Europe, which includes 18 states and 350 million people, needs to act at the European level rather than a national level.

"The nations need to make some major individual and collective decisions if serious economic decline is to be avoided," said von Moltke. One voice in monetary terms is necessary, von Moltke suggests, to minimize the effects of fluctuating exchange rates. In fact, efforts to build a monetary system based on a European monetary unit are under way.

"In the international monetary jungle," von Moltke said, "the European monetary system can help to provide sort of a shock absorber for European currencies and can help to ensure that the gyrating dollar does not continually drive them apart, thus adding to the uncertainity with which our businessmen have to live.

"We also need a monetary system in Europe in order to give Europe a greater voice in international monetary affairs—a voice commensurate with its role as the world's greatest trading partner," he said.

He also recommends the coordination of economic policies. "We need to work to maintain the free international trading system. For Europe to develop a Common Market plan to be less vulnerable to the vagaries of the dollar is in the interest of both sides of the Atlantic. For without these developments, it will impede the flow of trade between Europe and the U.S., and both will continually be threatened as currency fluctuations enhance the penetration of imports on one side of the Atlantic and then on the other."

Achieving that oneness may be easier said than done. "The U.S. never had the problems that we're having in Europe at the moment," said John Drew, director of European affairs for Touche Ross and international affairs advisor for Rank Xerox Ltd. "No one said to the U.S., 'by the way, one of these days you guys are going to have to become the United States.' "

The Ball-Albert study, in addition to advocating one voice for Europe, suggests two action plans.

Ball believes economic policy should be set to create an environment in which investment is encouraged and economic agents can function more efficiently. He also suggests a framework be created in which management and labor can work in an internationally competitive way. He further said financial soundness must be restored to government and deficits adjusted.

Albert proposed a $15 billion investment drive targeting high-technology industries. The funds would be raised through a tax on imported oil. His plan also involves increased borrowing at the European level and a "Marshall Plan" for energy-saving investments. He acknowledges Europe will never again see full employment, and suggests employes negotiate for the number of days and days of the week they work.

There are signs the tide is turning for Western Europe, according to some experts. New technologies are developing and greater emphasis is being placed on service industries, high technologies and small business, they say.

Dudley Fishburn, executive editor of The Economist magazine and speech writer for British Prime Minister Margaret Thatcher, notes a change in the European mood which will aid in its economic recovery. "The principal issue is that the mood of conservativism, which is felt in the U.S. and Canada, is also now being shared in Western Europe," Fishburn said during the Touche-Ross discussion. "Indeed, it probably started in Western Europe where 30 years of a post-war welfare state has run out of steam."

He pointed out in the last two European elections of any size—in Britain and West Germany—conservatives were voted into office. More importantly, that mood has pervaded traditionally socialist countries. Even the military dictatorship of Turkey has given way to a successful free enterprise leader, Fishburn said.

Struggling

Continued from Page E-5

son says. "We're seeing some signs the companies are heading that way."

By 1990, Lawson estimates, 800,000 cars will be brought to Western Europe by companies such as Ford, Fiat and GM to try to restore profitability. At present, those imports account for only small percentages. Ford, for example, exports about 250,000 Escorts a year to Scandinavian countries from Brazil; Fiat sends about the same number of its Uno model there from Brazil.

Meanwhile, Western European car exports to the U.S. should remain at 1984 levels, which have been record levels for some companies. Lawson says they have plenty of capacity to send enough cars to the U.S., which was not the case in 1984. "I don't think that will change terribly significantly," he says. "They still will increase their penetrations."

However, Hammond notes, with a growth slowdown forecast for the second half of 1985 in the U.S., European auto makers will have to begin to generate growth in their own market.

The truck side of Western Europe's business has offered little help for recovery. Truck production hit its lowest levels in decades, and exports from Western Europe have been cut in half from historic peak levels. Automotive News World Outlook indicates the slump has seen its worst, yet the structure of the business will never be the same. In the future, more and more trucks will be assembled in countries where they are sold.

Meanwhile, Automotive News World Outlook has turned less bullish on the pace of Third World growth for motor vehicle sales and production.

South Korea appears to be the only developing nation in the Asia-Pacific area to come close to fulfilling its aspirations for auto production, stealing the show from Malaysia and Taiwan, which have similar aspirations.

Hyundai, with its new Stellar and upcoming X-car, will be the leader along with Daewoo, the GM affiliate. South Korean auto makers will take over the inexpensive, basic transportation segment surrendered by the major Japanese companies which will continue to concentrate on more upscale segments. Though the real numbers remain small for auto production compared to Europe, the U.S. or Japan, South Korean auto production, which increased 114 percent from 1980 to 1983, will jump another 152 percent through the end of the decade. Exports have increased 180 percent in the same period and will skyrocket 390 percent through the end of the decade.

At the same time, European and U.S. domestic auto makers will have production capacity in Latin America, which will add to the difficulty of other Asian countries with high auto production goals to advance.

Even if everybody uses the same blue book, And so has the confusion over truck wholesale values. That's why Black Book adapted it's proven methods to bring you an authoritative, accurate monthly guide to truck prices. Our professional reporters cover major auctions across the country, as well as specialized truck and equipment sales. Vehicles are classified according to condition and a long list of other vital factors to give you reliable wholesale prices and a loan value. There's even a special section that shows you how to use serial numbers as a source of valuable information on each vehicle. And whether it's a half-ton or two-ton, van or four-wheel-drive, you can count on the Black Book to judge its real value.

Labor

Continued from Page E-10

suppliers should be concerned about GM's new job bank program. In the program, workers laid off because of new technology, outsourcing, negotiated productivity improvements, work movement and production consolidation will be retrained for new jobs, either inside or outside GM.

According to Warren, some of those people ultimately could be placed in the supplier network if no jobs are available at GM. But that's a last resort, he says.

Miner says the concept is borrowed from the Japanese, but Japanese auto companies often own supplier firms, and since U.S. auto companies often don't, the program may not work here. "It's far different talking to a Rockwell or TRW," he says. "They may tell us, 'We value your business, but if you think we're going to take workers you have left over, then adios.' Smaller suppliers can't do that. Ford and GM may want to invite their workers to go to a supplier company at the same time the supplier company is suffering redundancies. Somebody has to fall out the bottom.

"There's no free lunch," Miner adds. "When the auto market declines, and it will, half the people in the auto industry could be out of work, and that means half the people in the supplier business. Where are those people going to go? The UAW has set up a system now where we take care of them, and to heck with anybody else who falls off the bottom. It's not the union's job to worry about who falls out the bottom, as long as it isn't their people, and it probably won't be. So I don't know if it's going to work."

GM and the UAW disagree. Bieber calls the job bank program "one hell of a giant step forward" in creating job security for UAW members. While it may not be Utopia, he says, some of the problems can be ironed out in 1987 negotiations. "The job security program has a firm foundation, and a lot of building blocks were laid," he says. "They just need to be squared up a bit."

Warren calls the job program "excellent," saying it lays the groundwork for future worker improvements, although workers will not necessarily get the same wages and benefits they got at GM once they leave the job bank. "The union's big concern was making sure their people had jobs," Warren says. "The big emphasis was on jobs."

Retraining hourly workers also will help GM become more competitive, Warren says, since workers will become more competitive by learning new skills, and may even move into traditionally white-collar jobs.

Although Ford and GM contracts are set for the next three years, the UAW has its eyes on 1987 negotiations. According to Bieber, while the annual improvement factor (AIF) was not renegotiated in 1984, it will be revived at the 1987 bargaining table. He also says the union is still interested in shorter work time, although it may not take the form of a four-day work week.

However, since AIF was given up in 1982 bargaining, the auto companies maintain it is gone forever.

Meantime, UAW leadership is working on improving communications with its membership. Bieber meets often with locals, assuring them of the union's continuing power base, and its influence in industry and government, as well as dealing with everyday problems. "You must always improve communication with the membership," Bieber says.

Rental agreement extended for three years

Avis, Nissan Kanko renew pact

By Francis J. Gawronski

Two of the world's bigger firms in the car-rental services are renewing their agreement to exchange car-rental reservations worldwide

Avis, Inc, Garden City, N.J., which operates in more than 130 countries, and Nissan Kanko Service, Ltd., which operates car-rental services exclusively in Japan, joined forces in 1981. They announced that they have renewed their cooperative business agreement for three additional years.

"Avis is proud to be a leading rent-a-car company in international locations," said Joseph V. Vittoria, Avis president and chief operating officer. "Avis and Nissan Kanko form a strong alliance to serve the worldwide car-rental needs of travelers to and from Japan. We are pleased to be associated with Nisssan Kanko."

"We are delighted to continue close cooperation with one of the world's foremost names," said Seiji Nakagawa, Nissan Kanko, president. "Avis is the ideal partner from which we can extend car-rental service worldwide. We expect to enjoy further expansion of our network and continued growth in volume."

Avis operates one of the world's largest (corporate and licensee) fleets of rental cars. Nissan Kanko, a wholly owned subsidiary of Nissan Motor Co., is Japan's third largest rent-a-car company with more than 400 rental locations and more than 10,000 rental vehicles.

Under the agreement, Avis' Tokyo-based partner exclusively accepts and services Avis reservations generated by Nissan in Japan for car-rental services outside that country.

The joint program also facilitates reciprocal transmissions and acceptances of reservation forms, prepaid vouchers and other documents utilized by the respective systems when applicable. Both companies also have agreed to honor traditional commitments for the payment of commissions to travel agents and other commissionable sources.

Avis also announced that it has merged seven sales areas into five reporting regions—Northeast, Mid-Atlantic, Southern, Central and Western. It named three new regional sales vice presidents to head them.

Newly named regional vice presidents are Peter Dizinno, Joseph Scalabrino and Theodore Heller.

The Northeast region, managed by Dizinno, who formerly was area sales director—Northeast, is comprised of the New York, Boston, Connecticut and New Jersey districts.

The Mid-Atlantic region, comprised of Washington, Philadelphia, Pittsburgh, Cleveland and Cincinnati, is headed by Scalabrino, former area sales director—Mid-Atlantic.

Thomas J. Byrnes, Southern regional vice president, has the Atlanta, Miami, Dallas and Houston districts in his division.

The newly formed Central region is comprised of the Chicago, Minneapolis, Detroit and St. Louis districts and is directed by Heller, who formerly was Midwest area sales director.

The Western region is now comprised of the San Francisco, Seattle, Los Angeles, Southern California, Hawaii and Denver districts, led by Oliver Milton.

Elsewhere, General Electric Credit Auto Lease, Inc. (GECAL), has moved into its new 63,000-square-foot administrative headquarters in Barrington, Ill. The new facility consolidates three previous locations in the Barrington area.

GECAL's 175-member administrative staff occupies the new facility, which includes a sales and management training center, a computer facility and additional space for anticipated expansion.

"Due to GECAL's tremendous growth and the continuing demand for auto lease financing, we felt the need not only to consolidate our existing facilities, but also to plan for expanded capabilities as well," said Dennis Carey, GECAL president.

Joseph M. Russo has been appointed public affairs director of Hertz Corp, New York. He previously was a vice president and director of marketing for First Jersey National Corp, Jersey City.

David J. Idstrom has been named corporate vice president of Car Leasing Division, Lend Lease, Minneapolis, succeeding John P. Dedon, who is retiring.

Francis K. Gnos, formerly vice president of national account sales, replaced Idstrom as sales vice president.

Associates Leasing, Inc, Chicago, has elected Pamela D. Strewe assistant vice president. Strewe will continue to be responsible for certain administrative functions for the truck leasing operations of the division.

Associates also announced the election of Mayer L. Smith as a vice president with continued responsibilities for all credit functions for both the auto and truck leasing operations of the division.

THE ADVANTAGE

Forget everything you know about Extended Service Contracts.

Now there's The Advantage™ from Western Diversified.

This could be the most important ad that you read today. The Advantage and The Advantage Plus extended service contract from Western Diversified is the finest product on the market, and that translates into one word for you: PROFITS.

For your customers. With The Advantage, you are providing your customers with a no-hassle, comprehensive extended service contract that allows them to enjoy their new or used car "worry-free."

For your dealership. The Advantage allows you to achieve maximum profits, the greatest customer satisfaction, with no personal liability.

Western Diversified has been in the Finance and Insurance business over 22 years. They have a commitment to their dealers that has been proven over the test of time. Western Diversified is around for the duration, committed to higher profits for their dealers through better programs. The Advantage and The Advantage Plus extended service contracts are yet another of the quality programs brought to you by Western Diversified. Call us for details, TODAY.

Total climbs 11 pct. for month

Import registrations move upward

By Jenny L. King
Detroit Reporter

Registrations of new imported cars claimed their second largest 1984 segment of the total market in September. At the same time, they dropped 1.70 percentage points from their year-ago penetration as the domestic market continued its sales romp.

Import registrations were up 11.74 percent from the 1983 level in September, with domestics shooting up 21.73 percent to overshadow the imports' gain.

According to figures provided by R. L. Polk & Co., import registrations for September totaled 231,029, up 11.74 percent from 206,747. Domestic numbers were 643,261 vs. 528,420.

Import penetration of 26.42 percent was down from 28.12 percent a year earlier and was second best for 1984 after the 26.74 percent recorded in August.

Honda's 2.34-percentage-point September gain was the most remarkable for any of the top 10 imports, while Nissan let go of 2.40 percentage points and dropped to third from first place.

Toyota was on top for the month, up 0.79 percentage points, to 21.59 percent from 20.80 percent. Mazda was up 0.01 percentage points, Volvo was up 0.32 percentage points and Audi climbed 0.49 percentage points.

Subaru was off 0.10 percentage points, Volkswagen dropped 0.59 percentage points, Mercedes-Benz was down 0.23 percentage points and BMW declined 0.28 percentage points.

The top 10 imports cornered 89.18 percent of the import market in September, up from 88.83 percent in 1983.

Year-to-date import penetration suffered a more dramatic loss, down 3.66 percentage points compared with the first nine months of 1983. Imports earned 24.61 percent this year, 28.27 percent in 1983. Their actual numbers were up 1.52 percent, to 1,881,318 from 1,853,210.

Year-to-date penetration of top-importer Toyota dropped 2.32 percentage points and Nissan was off 2.43 percentage points. Mazda slipped 0.48 percentage points and Subaru was down 0.28 percentage points.

Again, Honda was the winner, up 3.64 percentage points year to year. VW was up 0.88 percentage points; Volvo was up 0.28 percentage points; Mercedes was up 0.04 percentage points; Audi gained 0.91 percentage points, and BMW was up 0.41 percentage points.

The top 10 held 89.82 percent of the year-to-date imports market, up from 89.07 percent in 1983.

Japan, the predominant country of origin, was the source of 74.41 percent of all September imports. W. Germany supplied 10.72 percent and U.S.-built Hondas and VWs added 8.09 percent. A year ago, 76.58 percent were Japanese, 10.67 percent were German and 6.16 percent were U.S.-built.

Registrations by country of origin were:Sept./Sept.
1984/1983
Japan/171,906/158,323

NHTSA probes K-car fires in 1981-84 models

WASHINGTON.—NHTSA has decided to investigate engine compartment fires in Chrysler Corp. 1981-84 K-cars, as requested by the Center for Auto Safety.

Another new NHTSA defect investigation—as requested by the center—involves possible sudden acceleration in 1979-84 Nissan 280 and 300-ZX models.

NHTSA has also decided to investigate: Stalling in 1984 Ford Tempo/Topaz models; seat-back failures in General Motors 1984 A-, J- and F-cars; jamming of seat-belt retractors in 1983-84 Ford Escort/Lynx models, and brake- valve/hitch incompatability in 1984 GMC Suburbans.

NHTSA has asked GM to recall 1982 Camaros for allegedly defective webbing in rear seat-belt assemblies.

Featuring concept cars, giant-screen film

Ford exhibit slated to tour U.S.

SAN DIEGO.—Marking the 50th anniversary of the San Diego Exposition, where the first Ford V-8 engine was shown, Ford Division sponsored an Experience the Technology exhibit at the Reuben H. Fleet Science Center here in December.

The exhibit featured two Ford advanced-concept cars and a 20-foot model of a Ford communications satellite. The exhibit is scheduled to tour the U.S.

An OMNI-NEWS newsreel, which Ford presented in conjunction with the exhibit, will run in the Space Theater through February.

The newsreel is the first one devoted exclusively to science and technology subjects and produced in the OMNIMAX and IMAX film formats. These feature the largest motion picture frame ever developed, Ford said.

The newsreel and exhibit are scheduled to tour science centers across the country equipped to show the special film on giant domed (OMNIMAX) or curved (IMAX) screens.

The exhibit and newsreel "bring the viewer one step closer not only to our advances in the automotive industry, but to those related to the environment and safety," said Louis E. Lataif, Ford Division general manager.

The first OMNI-NEWS features Sea World's use of high technology to duplicate an Antarctic environment for its new penguin exhibit; a segment demonstrating the use of computers and aerodynamics in automotive design, and the first OMNIMAX/IMAX film footage shot in outer space by NASA space shuttle astronauts.

The Experience the Technology exhibit displays two concept cars that incorporate futuristic mid-engine designs and a marked emphasis on aerodynamics: The Ghia Quicksilver and the AC-Ghia, both designed by Ford's Ghia Studio in Turin, Italy.

One purpose of the concept cars is to let Ford designers and engineers experiment with vehicles that really interest them, said Donald F. Kopka, Ford Motor Co. design vice president. The cars also show customers where the company is headed, said Kopka.

The Quicksilver is a five-seat, four-door sports sedan.

In the past, most mid-engine cars have had two-plus-two seating. The Quicksilver's rear seat is wide enough for three people, and the car provides 15.6 cubic feet of luggage space.

At 179.5 inches, the car is just 3 inches longer than a Mustang.

The AC-Ghia, a luxury mid-engine two-seater sports car, is just 46 inches high and 153 inches long. It features a low front end, an all-steel body that flows into a prominent rear spoiler and two sets of headlamps, one recessed into the front spoiler and the other behind rotating flaps in the front fenders.

Both cars are fully-operational cars and are powered by a transverse-mounted Ford 3-liter V-6 engine with a 5-speed transmission.

Besides the model of a communications satellite, the exhibit also includes a video presentation on the use of satellite navigation in Ford's Concept 100 car, a full-size concept Thunderbird design in fiberglass and a video on the Ford Probe IV passenger car.

Ford said the newsreel and exhibit are scheduled to open in Washington about mid-year.

3 additive firms charged with misblending by EPA

WASHINGTON.—EPA has charged three manufacturers of fuel additives with improperly blending alcohol with gasoline.

The companies are United Energy Co., Phoenix; UEC, Inc., Phoenix, and Sound Energy, Inc., Seattle. They face a combined total of $4 million in proposed civil penalties, according to EPA.

The firms were investigated after an anonymous source alleged they were improperly manufacturing and blending alcohol additives for use in unleaded gasoline, EPA said. A search of company records reportedly substantiated the allegations.

The illegal product was sold during the last six months of 1982, and additional misblending violations occured in the spring of 1983, EPA said.

A laboratory test of the blends showed they did not contain an approved gasoline additive. The firms had claimed to be marketing a brand of methanol-based gasoline additive that had been approved through the EPA's waiver process.

EPA said the improper use of blends leads to higher levels of emissions and may cause excessive wear to vehicle components.

United Energy Co. faces a proposed fine of $1.31 million. UEC may have to pay $880,000, and Sound Energy has been notified of a possible fine of $1.95 million.

EPA's action was the first step in prosecution. Opportunities for rebuttal exist and if a satisfactory settlement cannot be reached, the cases will be referred to the Justice Department.

Ford's AC-Ghia concept car on tour

The AC-Ghia, a concept sports car designed by Ford Motor Co.'s Ghia Studio in Turin, Italy, is featured in Ford Division's Experience the Technology exhibit presented in San Diego in December and scheduled to tour the country. The aerodynamically styled luxury mid-engine car is just 46 inches high and 153 inches long. Wide ducts built into the rear quarter panels and side pillars channel air to cool the rear brakes and the engine.

dealers ordering cars before the model goes down for its move to Canada.

The heavy stock of Fieros was caused by both decreased sales and a large production increase.

The Jan. 1 inventory was split this way: GM, 45.44 percent; Ford, 31.08 percent; Chrysler, 18.72 percent; AMC, 3.85 percent; Volkswagen, 0.76 percent, and Honda, 0.15 percent.

One month earlier, the split was GM, 45.54; Ford, 31.56; Chrysler, 18.61; AMC, 3.50; VW, 0.67, and Honda, 0.12.

The shares by size class on Jan 1 were: Subcompact, 22.06 percent; compact, 23.65 percent; intermediawte, 27.97 percent; standard, 17.21 percent, and luxury, 9.11 percent.

On Dec. 1, the percentages were: Subcompact, 21.85; compact, 24.02; intermediate, 28.04; standard, 16.89, and luxury, 9.20.

The month opened with an 83-day supply of subcompacts. The days' supplies by nameplate: Domestic Accords, 6; Pontiac 1000, 51; Chevette, 58; domestic VWs, 71; Escort, 71; Omni, 92; Lynx, 95; Horizon, 103; Charger, 111; Turismo, 112; Fiero, 118; Daytona, 123; Encore, 129; EXP, 129; Laser, 135, and Alliance, 147.

There was a 52-day supply of intermediates: Pontiac 6000, 28; Grand Am, 29; Cutlas Ciera, 31; Cutlass Supreme, 33; Century, 37; Celebrity, 39; Monte Carlo, 50; Thunderbird, 50; Bonneville, 51; Regal, 52; Skylark, 61; Cougar, 62; Caravelle, 63; Calais, 65; Grand Prix, 66; Somerset Regal, 70; Dodge 600, 77; LTD, 77; New Yorker E, 81; Marquis, 83; Phoenix, 83; LeBaron GTS, 85; Lancer, 93, and Citation, 102.

There was an 80-day supply of standard-size cars: Oldsmobile 88, 47; LeSabre, 60; Chevrolet, 78; Parisienne, 84; Diplomat, 86; Crown Victoria, 114; Grand Marquis, 116, and Gran Fury, 128.

The luxury-car segment's average days-supply was 47, broken down this way: Electra, 33; Cadillac, 35; Oldsmobile Ninety-Eight, 37; Seville, 43; Lincoln, 44; Riviera, 45; Eldorado, 52; Corvette, 55; Fifth Avenue, 66; Toronado, 67; Continental, 72, and Mark VII, 78.

Chevy signs Hanson

Alfred R. Hanson Jr. signs for Al Hanson Chevrolet-Buick-Oldsmobile, Inc., Sandusky, Mich. Witnessing are, from left, A.J. Avram, Chevrolet district sales manager, and L.M. Hall, Flint zone manager.

Charges dropped against Honda in income-tax case

WASHINGTON.—The IRS has dropped charges against Honda Motor Co. alleging that the company underpaid U.S. income taxes during the years 1975 to 1978.

In a notice to the company sent Dec. 10, the IRS said there is no deficiency in income tax due.

With Honda dropped from the investigation, only Toyota Motor Corp. and Nissan Motor Co. remain in the tax investigation which has been ongoing for nearly six years. At issue is whether the two companies sold their products to their U.S. marketing subsidiaries at alleged higher than "arms-length" prices, thereby increasing the subsidiaries' costs and reducing their taxable profits.

Late last year Nissan's boss, Takashi Ishihara, told reporters in Tokyo that he expected the IRS to levy a fine of several hundred million dollars against his company and Toyota soon. Industry sources indicated previously to Automotive News that the amount could be as high as $300 million for Toyota and $200 million for Nissan.

Meanwhile, the dropping of Honda from the investigation weakens the argument made by both Toyota and Nissan that the tax issue is one that should be dealt with through government-to-government negotiations, a position that the U.S. Government has resisted, sources said.

2 AMC deals add lines; another opens

LOS ANGELES.—American Motors' Los Angeles zone has announced expanded product lines at two San Diego dealerships and one new dealership opening in San Diego.

Tower AMC-Renault has added the Jeep lineup; Peck Buick-Jeep now offers Renault products, and Rancho AMC-Jeep-Renault has opened.

GM relaxing its rules on holding of franchises

Continued from Page 1

know a lot more about the feasibility of that type of marketing by the time the Saturn comes out.

"How the new franchises will sell cars is wide open," said Joseph Sanchez, new president of Saturn Corp. "We are looking at shopping malls and different ways of using vehicles. We will be looking at all of them, but nobody is monitoring any specific system right now."

It is also possible that consumers will be able to buy an insurance policy on top of the three-year warranty to guarantee the workablity of their new vehicle, Sanchez said. It is possible that GM's new subsidiary, Electronic Data Systems, with its expertise in computer data processing, will play a major role in creating one-stop shopping for the car buyer.

"It is possible that over the next three years you won't have to write a check for anything and you will always have transportation," he said."It will be a function of the cost of that car. I am not saying that is the direction we are going in but it is one of the possibilities.

"We have got to start doing things differently if we are going to continue to be a U.S. manufacturer in passenger cars. Otherwise the most competitive and aggressive of our commpetitors overseas are going to take the market away from us, not only here but overseas as well."

The Saturn franchsing system should be looked at as a way to make all dealerships stronger, even those who do not get the car to sell, McDonald said.

"Saturn by itself was only important if we were to take all of the things that we learned from Saturn and move them eventually into the rest of our operations," he said.

American Honda builds center in Ohio

GARDENA, Calif.—American Honda Motor Co., Inc., will build a repackaging and distribution center on a 69-acre site in Troy, O. The $9-million facility wil employ about 75 persons when full operation is reached.

The center will receive automotive and motorcycle parts from Honda's manufacturing plant near Marysville, O., as well as from doemestic and foreign suppliers.

New models in U.S. debut at Los Angeles Auto Show

Continued from Page 1

its CaliFormula marketing effort for California.

"California is the Number One auto-buying market in the country," Greb said. "The intense competition from imports, the large population and the potential for outstanding automotive sales are all elements we have taken into consideration in continuing our statewide program."

This means AMC will again be committing $10 million in advertising to the CaliFormula campaign.

In addition, the company will continue its program of adding dealer points in the state. AMC added 14 franchises in 1984 and Greb hopes to add 15 more this year.

Renault Encore is also being offered with California-only limited options such as sunroof, stereo and power steering included at no extra cost.

Called Encore GS, the package is being sold for $7,560. The company also lowered prices on base Alliance models to have a $5,767 entry in the market.

J. Michael Losh, Pontiac general manager, said his division's image cars are well accepted in California and that Grand Am is the best selling GM20 car.

Losh said Grand Am currently stands at a 13-day supply and that although Pontiac is pegged at 28 percent of production, the division is responsible for 40 percent of GM20 sales.

The quick turn in sales, Losh said, is why Grand Am is outpacing Oldsmobile Calais and Buick Somerset Regal. He added that Pontiac may be able to increase its share of the production run because of the car's initial success.

Erich Bitter, the German luxury-car builder, used the L.A. show for the debut of his new four-door sedan. With an anticipated sticker price of about $55,000 when it goes on sale next spring, the Bitter sedan is a stretched version of the coupe.

Using Opel Senator components, the Bitter four-door can be equipped with either a 3.0- or 3.9-liter in-line six-cylinder engine.

Ed Swart, who directs Bitter sales in the West, reported that California certification had recently been granted to the company and that Bitter sales have begun here. Previously, the cars could be sold only outside California.

Also displayed in the specialty car/limo tent was a 52-inch stretch Accord LX limousine built by Marquis Custom Coach, of Canoga Park, Calif. Owner Jules Kaplan formerly built the Moselle neo-classic and has moved into conversions.

Kaplan said the conversion work includes stretching the overall length of the vehicle from 175.4 to 227.4 inches. The rear doors have also been lengthened 13 inches to improve entry and exit.

About 800 pounds have been added to the car in strengthening materials and interior appointments. The base 1.8-liter powerplant is left intact. Kaplan said he uses heavier-duty springs, and the configuration remains front-drive.

Marquis works primarily through dealers, converting the Accords for them. Typically, the stretch limos retail in the high $20,000s to low $30,000s, Kaplan said.

Honda has bought one of the vehicles and shipped it to Japan for use by the parent company.

Jeep tracks said to attract new customers

Continued from Page 16

cost some $3,000 and was built on the day after Thanksgiving. The dealership, he added, had all the materials and needed only a bulldozer to build the course.

Designed with the help of Mark Smith, a Calfornia Jeep enthusiast who works with AMC on the dealer track program, the course covers a 250-foot square area.

Smith has driven in the Jeepers Jamboree, an event covering about 26 miles over the similarly rugged Rubicon Trail from Georgetown, Calif., to Lake Tahoe, Nev., for more than 25 years.

Szott said the dealership plans to invite the public to a track promotion this year, and hopes to get 2,000 people to attend the event.

He said Neal Pope AMC-Jeep--Renault in Atlanta, held an open house at its dealership/track which attracted 3,000 people and sold 30 Jeeps.

Szott claimed the Taylor track has been responsible for several sales since it was completed.

In fact, he said the first demo model used on the track has been sold.

Imports set record for year

Domestic sales up 17 pct. for '84

Continued from Page 2

up 11.42 percent, to 941,611 from 845,083, and Oldsmobile again broke the one-million barrier with sales of 1,056,053 in 1984 compared with 1,007,559 in 1983.

Chrysler was up 25.92 percent in 1984, Dodge was up 17.61 percent and Plymouth was up 8.90 percent year to year.

Ford reported a 22.67-percent sales gain, Mercury was up 28.76 percent and Lincoln was up 49.13 percent.

In addition to the Buick and Oldsmobile increases, GM reported a 27.40-percent sales gain for Pontiac, a 16.16-percent gain for Chevrolet and a 6.55-percent increase for Cadillac.

Imports with record passenger-car sales for the year included Peugeot, Jaguar, BMW, Saab, Volvo, Subaru and Mercedes-Benz. BMW's record capped 11 consecutive years of sales increases in the U.S. and included an any-month peak in December.

Mercedes and Jaguar also set any-month sales records in December. The 1984 sales increase for Audi was 48.61 percent, Volkswagen imports were up 34.37 percent, Honda imports were up 7.17 percent and Toyota was up 0.40 percent.

Mazda sales declined 2.15 percent, Nissan was off 7.01 percent and Renault plunged 63.16 percent. Mitsubishi was up 19.38 percent, Alfa Romeo was up 23.32 percent and Isuzu dropped 16.87 percent.

Fourth-quarter domestic sales were only 2.03 percent ahead of the last quarter of 1983: 1,850,927 vs. 1,814,142.

U.S. new-car sales in December were up 1,251 units from the same month a year earlier, or plus 0.22 percent, to 560,672 from 559,421. On a daily-rate basis, sales were up 4.23 percent, to 22,427 from 21,516 units per selling day. There were 25 selling days in 1984, 26 days in 1983.

Chrysler, Ford and Honda continued to make gains the last month of the calendar year as the competition gave ground. Chrysler sales were up 7.85 percent, to 73,233 from 67,901. Ford reported sales of 150,110 new cars, up 7.65 percent from 139,437. Honda was up 30.53 percent, to 9,112 from 6,981.

GM's sales dropped 2.59 percent for the month, to 314,186 from 322,525. AMC was down 37.15 percent, to 10,269 from 16,338, and VW tumbled 39.70 percent, to 3,762 from 6,239.

Chrysler's share of the December market grew to 13.06 percent from 12.14 percent. Ford was up to 26.77 percent from 24.93 percent. Honda climbed to 1.63 percent from 1.25 percent. GM was pushed down to 56.04 percent from 57.65 percent, AMC was down to 1.83 percent from 2.92 percent and VW held 0.67 percent compared with 1.11 percent a year earlier.

Makes reporting improved December sales included Chrysler, up 13.73 percent; Dodge, up 8.81 percent; Plymouth, up 0.69 percent; Ford, up 1.77 percent; Mercury, up 9.45 percent; Lincoln, up 77.11 percent, and Buick, up 19.47 percent.

Chevrolet was down 10.61 percent for the month, Cadillac was down 4.84 percent, Oldsmobile was down 6.88 percent and Pontiac was down 0.73 percent. AMC sales were down 46.52 percent and Renault dropped 34.95 percent.

• The December market-class chart had imports with the largest single segment of the total, 26.18 percent. Intermediates were second at 25.26 percent, followed by compacts with 17.07 percent, subcompacts at 12.39 percent, standards at 10.04 percent and luxury models at 9.06 percent.

A year earlier imports claimed 25.64 percent of the month's market, intermediates has 25.37 percent, compacts had 17.43 percent, subcompacts had 14.35 percent, standards had 9.12 percent and luxury models had 8.09 percent.

Excluding imports, the December, 1984, market featured intermediates with 34.22 percent, compacts with 23.13 percent, subcompacts with 16.78 percent, standards with 13.60 percent and luxury cars with 12.27 percent.

Import sales, notching a December record, were up 2.91 percent, to 198,814 from 193,193. The total included individual records for BMW, Jaguar, Mercedes, Peugeot and Saab.

Late-December domestic sales, hampered by the loss of a selling day compared with 1983, dropped 12.88 percent, to 179,993 from 206,610. On a daily-rate basis, Dec. 21-31 sales were off 2.00 percent, to an average of 22,499 per day from 22,957.

GM dropped 19.06 percent, Ford was up 2.51 percent, Chrysler was off 4.07 percent, AMC was down 52.46 percent, VW dropped 44.40 percent and Honda was up 33.88 percent.

Mitsubishi names Nash vice president

FOUNTAIN VALLEY, Calif.—Mitsubishi Motor Sales of America, Inc., has announced the apointment of Garrett J. (Mike) Nash as staff vice president—marketing services.

Nash was the first director of advertising at MMSA, appointed in 1982, shortly after the company's incorporation. He succeeds Robert L. Morgan, who moves to MMSA's advertising agency.

14 assembly plants work Saturday

Auto output at pre-holiday level

By Louise Kertesz
Detroit Reporter

During the first full work week this year, with Saturday overtime reported at 14 plants, U.S. auto makers targeted the high level of production reached before the holiday break.

Scheduled output of 185,283 cars last week was 65.90 percent more than the 111,682 for the three-day week that began the year and 23.49 percent better than the 150,035 for the year-ago week.

Year-to-date, 296,965 cars have been assembled, 3.96 percent more than the 285,648 built at this point last year.

Companies shared last week's estimated production as follows: General Motors, 58.61 percent; Ford Motor Co., 22.08 percent; Chrysler Corp., 14.19 percent; American Honda, 1.95 percent; American Motors, 1.94 percent; Volkswagen of America, 1.12 percent, and New United Motor Mfg., Inc., 0.11 percent.

GM scheduled two overtime shifts Saturday (Jan. 12) at its plants in Lansing (Oldsmobile Plant 1); Flint (Buick B and G Lines); Fairfax, Kans.; Framingham, Mass.; Janesville, Wis.; Lakewood, Ga.; Linden, N.J.; Lordstown, O.; Wilmington, Del., and Oklahoma City.

One overtime shift was scheduled Saturday at GM plants in Lansing (Oldsmobile Plant 2) and Orion Township, Mich.

Chrylser also scheduled Saturday overtime at its plant in Sterling Heights, Mich.

The plant is scheduled to operate a nine-hour daily shift this week (Jan. 14).

Honda scheduled 10 hours of overtime Saturday at its plant in Marysville, O.

Lane to head Oldsmobile; Pontiac names Schlesinger

General Motors last week promoted William W. Lane to general manager of Oldsmobile and elected him a vice president of the corporation.

Lane, 55, succeds Joseph J. Sanchez in the top job at Oldsmobile. Sanchez has been appointed president of GM's newly formed Saturn Corp.

Succeeding Lane as Pontiac general sales and service manager is Elwood M. Schlesinger, 46, who has been director of planning for Oldsmobile since last October.

In his new position, Lane is returning to the division where he spent 28 years of his 31-year GM career. He joined Oldsmobile in 1953 and became Southwest regional manager in 1973.

He was promoted to assistant general sales manager for the Western U.S. in 1977 and moved to the similar job for the East in 1980.

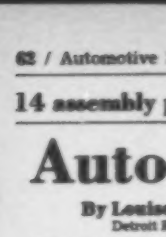
Lane was named Pontiac general sales manager in 1981. Last September, his responsibility was broadened to include service as well as sales.

Schlesinger has been with Oldsmobile since 1962. After a number of field and central office assignments, he was named Southwest regional manager in 1977.

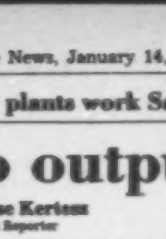
He was appointed assistant general sales manager for the Western U.S. in 1980 and assistant general sales manager for marketing and dealer activities in 1981. He held that post until he became director of planning.

Also at Pontiac, William E. Enockson was promoted to assistant general sales and service manager for marketing, merchandising and operations. He formerly was Western regional manager. Enockson succeeds John G. Middlebrook, now sales, service and marketing vice president for Saturn.

Jack R. Losch replaced Enockson as Western regional manager for Pontiac, and Dwight R. Logie succeeded Losch as Midwest regional manager. Logie was Chicago zone manager.



William W. Lane



Elwood M. Schlesinger

7,773,496 cars built in '84, companies report

DETROIT.—Calendar year totals released by auto makers place 1984 U.S. auto output at 7,773,496 units, up 9.30 percent over 1983's 7,112,352.

General Motors reported 1984 production of 4,344,783 cars; Ford Motor Co., 1,775,314; Chrysler Corp., 1,247,826; American Motors, 192,196; American Honda, 138,572; Volkswagen of America, 74,785, and New United Motor Mfg., Inc., 20.

Truck production jumps sharply to 63,885 for week

Domestic truck makers slated production of 63,885 units last week, 72.25 percent more than the 37,089 built during the three days of the previous week and 4.19 percent better than the year-ago week's 61,317.

So far this year, 100,974 trucks have been assembled, a dip of 5.87 percent from the 107,267 completed last year at this time.

Effective Jan. 4, line speed at American Motors' Toledo plant was increased with the aim of adding 80 Jeeps a day for a daily output of 824.

General Motors scheduled two overtime shifts Saturday (Jan. 12) at its plants in Pontiac (No. 5); Janesville, Wis.; St. Louis, and Lordstown, O.

Canadian output shows big gain with 19,982 cars

Canadian auto makers scheduled production of 19,982 cars last week, the first full work week of 1985.

The total was up 74.65 over the 11,441 assembled during the previous short week and 6.00 percent better than the year-ago week's 18,851.

So far this year, 31,423 cars have been built, 13.18 percent less than the 34,983 completed a year ago at this point.

American Motors' Brampton (Ont.) plant, which builds the Eagle, shut down last week for two weeks for inventory adjustment. Production is scheduled to resume there on Jan. 21.

Makers targeted production of 18,666 trucks last week, up 58.17 percent from the 11,801 built the previous week and 29.31 percent more than the year-ago week's 14,435.

At Chrysler Corp.'s Windsor (Ont.) plant, 2,580 Plymouth Voyagers, 2,742 Dodge Caravans and 594 Mini Ram Vans were scheduled for completion last week, bringing the T-115 total for the year to 9,920.

Year-end totals released by the company show that 240,253 minivans were produced in 1984.

Honda, Mazda add 4WD units

TOKYO.—Four-wheel-drive vehicles are rapidly entering the marketplace in Japan, according to the Japan Automotive News.

Honda has introduced, for the home market, a 4WD station wagon, the Civic Shuttle, with a part-time 4WD system. Its 5-speed manual transmission has an interlock which makes first gear a "super low gear" for use with 4WD.

Mazda has added 4WD versions to its Bongo station wagon and van lines. Standard equipment includes free-wheeling hubs.

Biggest transformation since days of Durant and Sloan

GM: A new kind of global conglomerate

By Marjorie Sorge, Edward Lapham and Michelle Krebs
Of the Automotive News staff

News Analysis

General Motors is undergoing its biggest transformation since William C. Durant and Alfred P. Sloan shook up the automotive world, and the New General Motors Corp. will change the way worldwide business is done.

GM has rewritten the definition of conglomerate. The New General Motors Corp. will be a fully integrated global—or even intergalactic—conglomerate with consistent pieces, unlike the traditional definition in which a company owns totally unrelated businesses.

Those pieces will not only circle the GM network and change the way suppliers, dealers and the rest of the auto industry do business, but will reach far beyond that into all of the industrial world.

As it emerges from its restrictive cocoon, this sleeping giant will become an international industrial juggernaut.

What GM has done under the leadership of Chairman Roger B. Smith and President F. James McDonald is to take the old Durant/Sloan business concept, update it and expand it for the high-tech diversification of the 1980s and beyond.

Durant and Sloan were former GM leaders who revolutionized the automotive business.

Their concept, adopted by almost every industrial base in the world, involved a central staff which oversees and administers separate profit center line operations.

In the past, GM used the line-staff concept strictly for its automobile business. Now, the automobile business will be the center of the emerging

Cooperative car

Russian Lada by Porsche

Next year, a modern Lada with an aerodynamic body and a fastback will be launched. The Russian engineers had their German colleagues at Porsche in Stuttgart, West Germany, develop the new three-door compact car. The light metal transverse engine is completely new; three versions probably will be offered. The Russians plan to build 350,000 of these cars annually.

Hyundai plans U.S. sales this autumn

LOS ANGELES.—Hyundai will be setting up its U.S. shop in suburban Garden Grove with a former Toyota executive at the helm, and it expects to begin U.S. sales in the fall, Automotive News learned last week.

Max Jamiesson, who left his post as sales vice president—Western region for Toyota a year ago, has been named executive vice president and chief operating officer of Hyundai Motor Co. (U.S.A.).

Greg Warner, who recently was named corporate manager of product planning at Toyota, will take over as group vice president—marketing, finance and general operations for Hyundai.

Bruce Campbell, also from Toyota, will be vice president for parts and service, and a number of other ex-Toyota employes are reported to be joining the company.

The management team probably will be introduced at Hyundai's reception during the NADA convention in San Francisco.

Sources indicate that the new company is expecting first-year sales of 100,000 units and will operate through franchised dealers. No regional distributors are planned.

The U.S. unit of Hyundai will be selling a new front-wheel-drive subcompact designed by Giugaro. The Korean-built car will use a power plant designed by Mitsubishi and manufactured by Hyundai under license.

Dealer shop volume shows monthly gain

By Francis J. Gawronski
Service Editor

Service and parts business in new-car dealerships across the country continued on the upswing—but at a slower growth rate—for the second consecutive month in November.

Shop business recorded its first decline in 18 months in September.

According to the Automotive News Service Index, shop business at dealerships in November amounted to 110.2 percent of the volume recorded in the same month in 1983.

In October, shop business was 18.5 percent ahead of the volume in the same month the year before. In September, service and parts business dipped to 98.3 percent of the volume reported for the same month in 1983.

All five indicators used in the Service Index registered healthy gains in November, led by shop parts sales—those used on both customer-paid and warranty work—which climbed 15.9 percent over the year-earlier volume.

The next best showing was that of total labor sales (customer-paid and warranty jobs), up 13.8 percent, followed by gross profit on all labor, parts and accessory sales which was up 12.2 percent. This is the most important indicator from the dealer's viewpoint.

Sales of all parts and accessories were up 8.6 percent in November, while repair orders written increased 6.1 percent over the volume reported for the same month ayear ago.

Figures used in the Service Index are averages compiled from reports on shop operations submitted by a cross-section of the nation's new-car dealers.

For the first 11 months of 1984, service and parts business was 114.5 percent of the volume for the same period of 1983. Business for the 10-month period was 115.5 percent above the year-ago volume.

Shop parts sales showed an increase of 20.6 percent for the January-November period, while total labor sales advanced 16.0 percent and and sales of parts and accessories were up 15.6 percent.

Gross profit was up 15.5 percent for the period, while repair orders written climbed 7.1 percent.

SERVICE INDEX
110.2★

	Nov., '84 vs. Nov., '83	11 mos., '84 vs. 11 mos., '83
Gross Profit on All Labor and P&A Sales	+12.2%	+15.5%
Repair Orders Written	+ 6.1%	+ 7.1%
Total Labor Sales (Customer & Warranty)	+13.8%	+16.0%
Shop Parts Sales (Customer & Warranty)	+15.9%	+20.6%
Sales of All Parts and P&A	+ 8.6%	+15.6%

★—Survey by Automotive News shows that dealer's service and parts business in November, 1984, was 110.2 percent of business in November, 1983. Service business in the 11 months of 1984 was 114.5 percent of business in the corresponding period in 1983.

breaking news

GM, Spanish truck maker to study linkup

DETROIT.—General Motors has signed a memorandum of understanding with ENASA, Spanish truck manufacturer, and INI, its parent firm, to explore "a possible business relationship." GM said it hopes a joint study can be completed by April 30 and that a decision on any proposal can be made by June 30. ENASA's full line of light and heavy trucks and buses will be included in the study, GM said.

China plans auto extravaganza

SHANGHAI.—China, in line with a policy to expand foreign trade, plans a seven-day automotive exhibition and seminar next July 3-9 in Shanghai. Exhibitors, in addition to displaying their products, will conduct seminars on products and technologies. The affair has been named Automotive China '85.

Used-car market softens, GM employes don't pick up new ones

1985 Corvettes piling up for some dealers

By Richard Johnson
Detroit Reporter

General Motors employes who cancel orders placed for new Corvettes under the company's employe discount program may be responsible for an oversupply of 1985 models at some Chevrolet dealerships.

With the market for used 1984 Corvettes reportedly soft, some dealers catering heavily to GM workers say they are being burned because employe-plan customers can't unload their year-old cars. The result is that Corvettes are piling up on their lots.

Even some Chevy dealers who say they aren't affected by cancellations report heavier inventories than usual this winter. However, a Chevrolet spokesman said daily build rates at the Bowling Green (Ky.) Corvette plant have fallen short of sales levels since the 1985 model run began.

The Corvette inventory could also be dissipated quickly by a strike that began last Wednesday, Jan. 16, at the 1,600-employe Bowling Green plant. The UAW local struck principally over what it considered to be punitive work assignments at the facility. Altogether, the union reported 28 outstanding issues.

Shortly after the strike began last week, a spokesman for the Chevrolet-Pontiac-GM of Canada group said he was not sure how quickly the work stoppage could affect supplies.

"I understand we are selling them almost as fast as we can build them," he said. "I would think it wouldn't take too long before they dried up."

A UAW spokesman in Detroit predicted that the walkout would not last long.

"There is a lot of pressure on the company to wrap this up because it is a profitable model," he said. "Our people understand that. They should be able to work it out in pretty short order."

Before the strike, some Chevrolet dealers were reporting an unexpected abundance of Corvettes.

"GM employes are ordering them and then not picking them up because they can't sell their '84s," said Andy Macik, sales manager at Jefferson Chevrolet, Detroit. "Some of those people will buy a new one every year and try to get all their money back when they sell it. They thought they could have their cake and eat it, too."

When owners of 1984s find they cannot get their asking prices, Macik said, they simply forego the 1985 models they had ordered to spec.

"They don't pick them up," he said. "They don't even call you. It's terrible. They get first preference, even ahead of a sold order, and they get a break on prices. The legitimate buyer has to wait in line.

"The factory is happy because the cars are paid for by the dealer," he added. "We sit with them all winter, hoping somebody

Best total since 1966 for early January

Sales up 28 pct. as year opens

By Jenny L. King
Detroit Reporter

U.S. car makers and their dealers got the New Year off to a remarkable start by posting a Jan. 1-10 sales total 28 percent ahead of the year-ago number and chalking up the best early-January sum since 1966.

In a period historically characterized by widely varying sales, ranging from 93,235 in 1975 to 202,453 in 1966, the strong showing bodes well for the months ahead.

The total for the domestic industry this year was 190,869, up 27.98 percent from 149,136 in 1984. On a daily-rate basis, sales were up 11.99 percent, to an average of 23,859 for each of eight days from 21,305 for seven days in 1984.

Chrysler Corp. reported the largest sales gain among the Big Three auto makers: Up 45.85 percent to 24,699 from 16,935. Ford Motor Co. had a 38.84-percent increase, climbing to sales of 45,362 from 32,673 a year earlier. General Motors sales numbered 111,905, up 22.32 percent from 91,488.

Honda pushed its way past American Motors to take fourth place among the domestics. Honda's 4,478 total for the period was up 55.70 percent from 2,876. AMC dropped 16.69 percent, to 3,270 from 3,925, and Volkswagen dipped 6.78 percent, to 1,155 from 1,239.

GM's share of the Jan. 1-10 domestic market was 58.63 percent, down from 61.35 percent in 1984. Ford earned 23.77 percent, up from 21.90 percent. Chrysler claimed 12.94 percent, up from 11.36 percent, and Honda had 2.35 percent compared with 1.93 percent. AMC slipped to 1.71 percent from 2.63 percent, and VW held 0.60 percent, down from 0.83 percent.

Buick announced record sales for the period, its 18,248 tally breaking the former record of 18,025 set just 12 months earlier. Cadillac, which had a record for the period in 1984, fell behind this time and was the only GM make to fail to surpass 1984. Cadillac was down 38.52 percent.

Chevrolet was up 51.11 percent, Oldsmobile was up 17.67 percent and Pontiac was up 39.07 percent.

At Chrysler Corp., Dodge was up 52.11 percent, Chrysler was up 50.27 percent and Plymouth was

Schedule of events

Day by day at NADA convention

Saturday, Jan. 26

8 a.m. to 5 p.m.

Registration. Lobby level, Moscone Center.

8:30 a.m. to 2:45 p.m.

Equipment Exposition. Exposition Hall, Moscone Center.

3 p.m. to 5 p.m.

Formal opening of the 68th Annual Convention. Civic Auditorium. (Buses leave from Moscone Center.)

Time Magazine Quality Dealer Awards.

Introduction of 1984 officers.

President's report—James P. Jennings, 1984 president.

Keynote speaker—H. Ross Perot.

Sunday, Jan. 27

9 a.m. to 5 p.m.

Registration. Lobby level, Moscone Center.

9 a.m. to 2:30 p.m.

Equipment Exposition. Exposition Hall, Moscone Center.

9:30 a.m. to 10:30 a.m.

Nondenominational Worship Service with Lou Holtz as inspirational speaker.

11 a.m. to 12:15 p.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

1 p.m. to 4:30 p.m.

San Francisco city tour. Buses depart from Moscone Center.

1 p.m. to 5 p.m.

Oriental Fantasy tour. Buses depart from Moscone Center.

1:00 p.m. to 5 p.m.

Muir Woods/Sausalito tour. Buses depart from Moscone Center.

1:30 p.m. to 5 p.m.

Victorian Homes tour. Buses depart from Moscone Center.

2:30 p.m. to 3:45 p.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

4 p.m. to 5:15 p.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

Monday, Jan. 28

9 a.m. to 5 p.m.

Registration. Lobby level, Moscone Center.

Equipment Exposition. Exposition Hall, Moscone Center.

9 a.m. to 10:15 a.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

9 a.m. to 5 p.m.

Wine Country tour. Buses depart from Moscone Center.

10 a.m. to 11:30 a.m.

Ladies Game Show with Dennis James as host. Civic Auditorium. (Buses depart from Moscone Center.)

11 a.m. to 12:15 p.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

1 p.m. to 4:30 p.m.

San Francisco city tour. Buses depart from Moscone Center.

1 p.m. to 5 p.m.

Oriental Fantasy tour. Buses depart from Moscone Center.

Muir Woods/Sausalito tour. Buses depart from Moscone Center.

Flowers and Gardens tour. Buses depart from Moscone Center.

Victorian Homes tour. Buses depart from Moscone Center.

2:30 p.m. to 3:45 p.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

4 p.m. to 5:15 p.m.

NADA workshops and make meetings. Mezzanine and Ballroom levels, Moscone Center.

Tuesday, Jan. 29

8 a.m. to 11 a.m.

Registration. Lobby level, Moscone Center.

8:30 a.m. to 11 a.m.

Equipment Exposition open for FINAL DAY. Exposition Hall, Moscone Center.

9 a.m. to 10:15 a.m.

NADA workshops.

11 a.m. to 12:30 p.m.

NADA General Session. Grand Ballroom, Moscone Center.

Presentation of 1985 officers.

President's acceptance speech—William J. Symes.

Guest speaker—George Will.

1 p.m. to 4:30 p.m.

San Francisco city tour. Buses depart from Moscone Center.

7 p.m.

NADA Diamond Reception and Dinner for DEAC contributors, featuring Comedian Danny Gans and Les Brown and His Band of Renown.

Stockpile is 32½ days

Imported-car supply highest in 19 months

By Kathleen Hamilton
Assistant Managing Editor

The inventory of new imported cars in port and dealer inventories reached a 19-month high on Jan. 1, as December sales slowed and importers tried to replenish their sparce stockpiles.

They succeeded only marginally, raising their average days-supply from 27 days to 32½. The ideal import stockpile is roughly 60 days.

The latest days-supply figure is, however, the highest since June 1, 1983, when there were 33 days' worth of cars in stock. On Jan. 1, 1984, there was a 30-day supply of import cars in stock.

The latest count translates into a unit count of 259,933—also the highest since June 1, 1983, when there were 275,411 imported cars in stock. The Dec. 1, 1984, stockpile was 232,152 units; the Jan. 1, 1984, figure was 223,527.

The supply of imported trucks —114,485 units—marked a two-year high point and translated into a 36-day supply, still short by industry standards. One month earlier, there were 98,396 new imported light trucks in inventory, but they were selling slower then, so that stockpile was a 41½-day supply.

On Jan 1, 1984, there were 81,748 import trucks in stock, worth 47 days. (All truck inventory figures include Nissan's Tennessee-built units.)

Combining cars and trucks, this year opened with 374,418 units in inventory, or 36 days' worth. One month earlier, there were 330,548 units, worth 32 days. The year-earlier figures were 305,275 units and 33 days.

The German makes were the only autos to show an increase in their sales rates during December, but they increased shipments, too, so January's days-supply level stayed steady with December's.

The sales rates of both Japanese and European makers other than the Germans dropped but shipments stayed roughly steady, resulting in increased days-supply levels.

The Japanese makes accounted for 62.08 percent of all import cars in stock; German cars, 27.17 percent, and cars from other European countries, 10.75 percent.

One month earlier, the shares were Japanese, 61.81 percent; German, 25.83 percent, and other countries, 12.36 percent.

The year opened with the Japanese cars averaging a 26-day supply. The days-supply figures by make: Subaru, 12; Toyota, 15; Honda imports, 17½; Mitsubishi, 22; Nissan, 35½; Mazda, 36½, and Isuzu, 74.

In addition, the Mitsubishi-built imports marketed by Chrysler Corp. averaged a 48½-day supply: Dodge Colt, 39½, Plymouth Colt, 43; Plymouth Vista, 57; Dodge Vista, 59; Plymouth Conquest, 123, and Dodge Conquest, 136½. Chevrolet's captive imports averaged a 125-day supply: 38 for the Suzuki-built Sprint and 203½ for the new Isuzu-built Spectrum.

German makes had an average of 53 days' supply: Mercedes-Benz, 21; Porsche, 43; BMW, 59½; Volkswagen imports, 64, and Audi, 78.

There was a 55½-day supply of cars from other European countries: Jaguar, 6; Saab, 27; Peugeot, 39; Maserati, an estimated 40 days; Alfa Romeo, 59; Volvo, 80, and Renault, 195.

Japanese-built light trucks and their days' supplies: Mitsubishi, 23; Mazda, 32½; Toyota, 35; Nissan, 56; Isuzu, 68; Chrysler, 71.

AutoWorld closes

FLINT.—Six Flags AutoWorld has closed temporarily, due to a less-than-anticipated 1984 attendance figure of 460,000 and the related financial losses.

Eurosport goes all white

An all-white Eurosport has joined the Chevrolet Celebrity lineup. It is available at the same price as the regular Eurosport option and has such exclusives as white body paint, white bezel trim, white grille, white painted bumpers, white body-side/bumper-rub strip moldings with red accents, white bumper center filler panel, white door handle inserts and white rally wheels.

Losh wants it exclusive for his division

Pontiac studies new wagon type

By Marjorie Sorge and Joseph Bohn
Of the Automotive News Staff

Pontiac may produce a station-wagon-like vehicle in the future and hopes it can sell enough to keep the vehicle exclusive, according to J. Michael Losh, Pontiac general manager.

Station wagons, he said, are continuing as an important part of Pontiac's sales volume, and "we don't think that's going to change."

"The thing that is perhaps changing," he said, "is: What is a station wagon? Or what kind of vehicle best fulfills the needs of a person who has traditionally bought a conventional station wagon? So we're taking a hard look at that," Losh added.

He said a vehicle of this type is needed to round out Pontiac's product lineup, especially since the minivan has taken off in the market.

The small passenger van is "something that's receiving a lot of attention at Pontiac right now, and for the reasons you would expect," Losh added.

And, he said, Pontiac will have a family-size car into the 1990s, although it may not be rear-wheel-drive.

Pontiac is also hoping to increase its sales more than 20 percent in the first quarter of 1985 and will increase its Grand Am production by about 750 a month for the balance of the 1985 model year, he said. Grand Am output currently is about 4,000 a month.

According to Losh, the Grand Am was initially supposed to account for about 28 percent of the total GM20 sales, but the Grand Am share jumped to 38 to 40 percent. The GM20 cars are the Grand Am, the Oldsmobile Calais and the Buick Sommerset Regal. Pontiac currently has about 90,000 unfilled orders for the Grand Am, he said.

In addition, Pontiac is planning to sell about 50,000 V-6 Fieros in 1985. That engine was added a few months ago. Pontiac sold 93,485 L-4 Fieros in 1984.

Meanwhile, Grand Am is splitting the demographic goal posts exactly as Pontiac wanted. Early data shows the average buyer is 35 years old; one-third of buyers are single, and one-half of them are female.

Buyers are well-educated and are attracted to the car chiefly because of its design, followed by

Symes sees a year of tough competition, narrower margins

Meet NADA's president: A man for the times

By Robert M. Lienert
Editor

William J. Symes, 64, is a man for the times.

He is successful. He is a native Californian. He is a Cadillac dealer. He is a communications professional. He is probably the ideal pick as 1985 president of the National Automobile Dealers Assn.

Things are going great for Bill Symes—and for the industry.

He takes office in the wake of a year that was inordinately successful for dealers and makers alike. Symes has no fear of economic disaster for himself or for new-car retailing in general. He has no concern that his customers are fading from the scene.

How different from some of pushed and pressured new NADA presidents of recent years.

So, even though he matches the mood of the moment, he warns that 1985 may well turn out to be a year of toughened competition and narrower margins. Interest rates are probably going to go up, he says, adding that this probably won't affect dealers very much.

Dealers had a good year in 1984 because they learned a lot in the recent lean years, he says.

"What we learned helped with profits in 1984."

Despite such rampant optimism, Symes expects 1985 to be a year of continuing battles. He thinks NADA will play a leading role in working on the issues of fleet subsidies, odometer legislation, the crusade against drunk driving and the buckle-up seat-belt campaign.

He is anxious to get going on all of these.

However, he plans no marked overhaul of NADA operations.

"I think NADA is running well," he says. "Dealership operation programs are also running well and we'll continue those—and the Dealer Candidate Academy.

"And I plan to work harder than in the immediate past on public relations."

A major thrust of the new emphasis on public relations will be an attempt to upgrade the public image of the dealer.

"Our image is not what it could be and that's not justly so," he says. "In the area of public relations, we want to get the word out that dealers are good citizens and good people. We are well aware that if you walk out on the sidewalk and poll (the public), we don't rate very high. I'd like to see us improve that, improve that by getting dealers more active in their communities and let the people realize that the dealer is a good citizen."

He'd like to see an upgrading of showroom tactics, too.

"Buying a new car ought to be a pleasant, exciting experience for the customer and it should be an enjoyable and profitable experience for the dealer," he says.

Symes also is vocal on the need to improve customer satisfaction.

"The manufacturers are work-

Joe Wilsenra photos

Looking ahead

Incoming NADA president William J. Symes says 1985 could well see tougher competition and narrower margins.

Is Symes NADA's first Cadillac solo?

PASADENA, Calif.—William J. Symes, incoming president of NADA, appears to be the first exclusive Cadillac dealer ever to hold that post.

Records show that six past NADA presidents had Cadillac duals, but there has not been a Cadillac solo in the period for which records are readily available. That goes back to 1939. Symes is also the first Californian to hold the post in more than 50 years. The last time a Californian headed NADA was in 1930. But Californians held the NADA presidency in 1929, 1927, 1925 and 1924.

Good from lean

Dealers had a good year in 1984 because they learned a lot in lean years, and that helped profits, Symes says.

By narrow margin over Fiat

Early count has Ford as winner in Europe

By Richard Feast
European Editor

LONDON.—Ford looks like the winner in its evenly matched race with Italy's Fiat Auto for the 1984 new-car market leadership in Western Europe.

The detailed counting is still going on, but unofficial estimates circulating within the industry give Ford the title. Its margin over Fiat was fewer than 7,500 units in a total market of more than 10.18 million.

The once-dominant Renault Group of France finished a firm sixth. Renault beat Ford by the narrowest of margins the previous year (1983), but a combination of internal woes and a major decline in the French market resulted in its sales collapse.in 1984.

New-car demand in the 16 countries of Western Europe last year was down 3 percent at 10,182,100 units. Five of the six largest national markets registered shortfalls compared with the previous year. Of the main six, only Italy produced a gain. The deficit in France amounted to more than a quarter of a million vehicles.

At the end of December, the leading manufacturers lined up in the following order: Ford with 12.8 percent; Fiat Auto (comprising Fiat, Lancia and Autobianchi) with 12.7 percent; the VW-Audi group with 12.1 percent; Peugeot SA (Citroen and Peugeot-Talbot) with 11.5 percent; General Motors (Opel-Vauxhall) with 11.1 percent, and Renault with 11 percent.

The order one year earlier was Renault, 12.6 percent; Ford, 12.5; Fiat, 12.0; VW and PSA, 11.8, and GM, 11.2.

No other group in Europe is anywhere near these leading six. The combined Japanese manufacturers fractionally lifted their market share from 10.1 percent 10.2 percent and registrations of just over one million.

This important Japanese presence and the generally lower demand for new cars in Europe forms a background to intense competition in the market place between the Big Six and other European auto makers. Few European volume car makers are in profit, and one estimate is of an aggregate deficit of $1 billion.

While these preliminary sales statistics should not be regarded as definitive, there is general agreement on the overall pattern. The detailed results will not be known for perhaps two months.

Fiat says it is still counting—and results from seemingly small countries like Portugal or Greece will be relevant when the result is so close. Nevertheless, the Italian makers' assocation put Ford ahead of Fiat by 0.5 percent at the end of November.

In early January, Ford was cagey about claiming victory, though it did estimate it had a record 12.9 percent of the market. However, Robert A. Lutz, chairman, is now so jubilantly confident Ford is No. 1 that he will say so in a speech to be delivered today (Jan. 21) in Stockholm.

The unofficial figures give Ford 1,303,600 units, a decrease of 0.5 percent on the previous year. But its market share was a record 12.9 percent, according to Ford, and 12.8 percent, according to these statistics.

Ford's European presence is broadly based, with market leadership in the U.K., Denmark, Ireland and Norway, and big chunks of West Germany, France and Spain.

Fiat's power is concentrated in Italy, a market which went against the general trend by increasing. In addition to its 54.3 percent of the Italian market, Fiat has made across-the-board improvements in the rest of Europe, mainly as a result in demand for the small Uno model. It's year-end total is put at 1,293,200, an improvement of 2.4 percent.

VW-Audi's figure of 1,227,100 was a fall of one percent on the previous year. Within that figure, however, the Volkswagen brand moved up 2.5 percent, while Audi fell back by 12.1 percent. The Golf is believed to have become Europe's best seller once more, with nearly 482,000 new customers.

Not too much should be read into the Audi drop. Like all other German manufacturers, Ford excepted, it was badly hit by the spring strike of metal workers. More importantly, Audi chose to dispatch more products to North America, where the strong dollar provided better profits. The same principle applies to other export-oriented companies like BMW, Daimler-Benz and Volvo.

In fourth position with 1,172,100 units was the Peugeot group (PSA). Citroen was well down, another reflection of the French market, but the two nameplates of Automobiles Peugeot Co. provided the greatest contrasts in the whole of Europe last year.

Peugeot soared by more than 22 percent to 559,000 units, thanks to the runaway success of the 205 model, which is now being built at maximum capacity. But Talbot's slide continued, down by more than a half to little more than 145,000. The combined result for the two (they are sold by the same dealers) resulted in a shortfall of 3.5 percent to 706,000.

GM's recent dramatic increases were brought to a halt last year, due mainly to strikes in West Germany and the U.K. The metal-workers' strike, for instance, had Adam Opel as a direct target, resulting a loss of 120,000 planned production worth an estimated $625 million.

GM ended the year with 1,127,900 or 3.8 percent fewer than the previous year. But the days of GM as an also-ran in Europe are over, and it is now a fully paid-up member of the Big Six.

The Renault record was of a 15.7-percent plunge to 1,115,200 units. This shortfall of more than 200,000 sales compared with the previous year meant moving from the market leadership it had held for all of the 1980s to sixth place.

The poor French market was part of the trouble. So, too, was a slowness in replacing large-volume models like the R-5 (now done) and R-18 (end of this year). This week Renault will report its 1984 deficit, thought by many to amount to nearly $1 billion.

Where the changes were

Country	1984 Total	Pct. Change from 1983
Austria	15,800	−15.9
Belgium-Lux	381,300	+ 4.1

Isuzu light truck added to GM lineup in Europe

BRUSSELS.—General Motors' commercial vehicle marketing unit in Europe, Convesco, has begun selling a new Isuzu light truck. The NPR model will be exhibited at the truck show, which started here Thursday, January 17, following introductions in Sweden, Norway, Finland and Denmark.

Until now Isuzu's presence in Europe has been restricted to pickups, medium vans and light four-wheel drives. The 6-ton GVW NPR takes Isuzu and GM into a category where there is established domestic oposition.

The development will not be welcomed by European truck makers, who are burdened with overcapacity and low demand.

The NPR is powered by a high-mileage direct-injection diesel of 3.3 liters. Payload is three tons.

It seems likely that in addition to the Scandinavian markets, the Isuzu will be sold in Belgium, Holland and Switzerland. Strict quotas will keep it out of France and Italy, and Bedford in the U.K. maintains it will not be sold there.

The recently established Convesco, based at the Russelsheim home of Adam Opel in West Germany, has the task of lifting GM's commercial vehicle presence in continental Europe. Bedford, with an established manufacturing presence in England, looks after the U.K.

Convesco offers a spectrum of Opel-based lights and vans and the broad Vauxhall range, from medium vans to heavy trucks. But Convesco is increasingly filling the segment gaps with built-up products from Isuzu, in which GM has a one-third interest.

Through the roof

Sky-Top Sunroofs, Inc., St. Louis, is marketing a power moonroof to fit the General Motors' N-body cars, the Buick Somerset Regal, Pontiac Grand Am and Oldsmobile Calais. The moonroof is electrically operated.

Brock gets VRA pitches as decision time nears

WASHINGTON.—The office of U.S. Trade Representative William Brock has been a busy one of late as decision time nears on the voluntary restraint agreement (VRA) involving Japanese automobiles.

Executives of the domestic auto makers and the import auto dealers have come in to make pitches for retention or repeal of the quotas, now in their fourth year.

Those quotas are due to expire in April, but speculation is prevalent here that they will not die for a variety of reasons, most of which are political.

First is the argument by Ford Motor Co., Chrysler Corp. and American Motors that, in spite of two record profit years, the U.S. industry is not sufficiently recovered from the recession of 1980-1982 to compete with the Japanese, given the latter's cost advantages.

Second, protectionist sentiment in Congress continues to bubble as each month brings an upward assessment of what the U.S. trade deficit with Japan will be. The latest projection is $33 billion.

Third, the Reagan Administration must push for voluntary quotas to give it leverage in its efforts to open Japanese markets to high-technology U.S. goods.

And fourth, quotas are needed by the Japanese themselves to prevent a surge of auto imports to the U.S. by the smaller makers who were frozen out when the voluntary import restraints were instituted. Such a surge, the major Japanese makers fear, would rekindle extreme protectionist sentiment here and leave them even more restricted than they are.

Ford and Chrysler have told Brock the VRA should be extended, if not at the current level of 1.85 million cars, then for a three-year period over which the level would be gradually increased, starting with a rise to 2 million cars for 1985.

Trade sources indicate that even GM, which has argued for an end to the quotas, has told the trade representative it could live with such a phase-out scheme.

Meanwhile, the major Japanese auto makers, although protesting that they want the VRA eliminated, also have indicated to Brock they would prefer a phase-out scheme, although at a faster rate: Perhaps 2.1 million cars allowed in 1985.

The matter is not solely up to Brock, however. Indeed, the Administration has made a point thus far of not dealing with the auto-quota issue and instead has focused attention on Japan's continued resistance to imported goods. The topic was purposely left off the agenda during President Reagan's recent meeting with Japanese Prime Minister Nakasone.

It will get an airing soon, though. It is scheduled to come up within a few weeks at the next Cabinet Council meeting, during which the Administration also is expected to look at studies by the Commerce Department and the International Trade Commission on the quotas.

Sources both inside and outside government expect the VRA will be continued for another year, probably at 2.05 million units. But they also caution it is a very fluid situation. Said one source who wished to remain unidentified: "If Detroit keeps making money the way they have been, don't be surprised if Reagan writes the quotas off."

Cadillac christens its two-seater Allante

DETROIT.—Cadillac has christened its 1987-model two-seat convertible Allante, a term Cadillac coined from the French word *allant*. The car was previously referred to as the Callisto. A Cadillac spokesman said Allante connotes "liveliness" and "motion."

Italy's Pininfarina will build the Allante bodies, which will be shipped to General Motors' Hamtramck (Mich.) assembly plant where they will be mated with the chassis.

Capolongo joins design firm

TROY, Mich.—James A. Capolongo, who resigned last fall as president of Ford of Europe, emerged as chairman of Entech International, overseas subsidiary of Entech Engineering Technology, Ltd., an independent design firm here.

Capolongo will keep offices in London and will be in charge of developing the overseas portion of the business.

Entech was a major contractor in the development of the Pontiac Fiero, and currently does 55 percent of its business with General Motors.

Compact Comanche unveiled by AMC

Jose J. Dedeuwaerder, American Motors president, shows off the 1986 Jeep Comanche compact pickup truck which will be introduced next fall. The truck will be offered in both two-wheel and four-wheel-drive models.

Total is off less than one percent from '78

'84 sales second best

Retail sales of new trucks of all types in the U.S. in calendar 1984 were the second-highest in industry history, falling only about 15,000 units below the alltime high achieved in 1978.

Franchised dealers and factory outlets retailed 4,092,379 vehicles during the year, according to preliminary reports, an increase of 30.8 percent over the previous year's 3,129,474.

The 12-month total was 0.4 percent less than the record 4,108,096 units retailed six years earlier.

Ford dealers sold 1,166,715 trucks in 1984, giving the company its second consecutive year of sales leadership and the seventh in the last eight years that Ford has been No. 1 in truck sales.

In December, sales totaled 314,661 units, a gain of 2.8 percent over the year-earlier 306,007. Domestic deliveries during the month were down slightly from the previous year, 263,243 versus 263,494, but the non-captive imports were up 21 percent to 51,418 units, compared with 42,513 in 1983.

Compact-truck sales during the year hit a record 1,723,044 units, an increase of 51.7 percent over the previous high of 1,135,897 established in 1983.

Sales of the domestic small trucks totaled 1,116,882 and accounted for 64.8 percent of the market, compared with 58.2 percent on 661,606 units in 1983.

The non-captive compacts' share was off 6.6 percentage points last year, from 41.8 percent on 474,291 sales in 1983 to 35.2 percent in 1984 on 606,162 deliveries.

Sales were higher last year in

GM to renovate plant for new '87 pickups

PONTIAC.—An all-new line of full-size Chevrolet and GMC pickup trucks for the 1987 model year will be built here in the General Motors Truck & Bus Group's Pontiac East assembly plant, which is being renovated and expanded at a cost estimated at nearly $400 million.

Patrick J. Coletta, group operations director, said medium trucks produced in the plant since its opening in 1972 will be relocated to the nearby Pontiac Central manufacturing and assembly plant, in which heavy trucks and GMC RTS transit buses now are built.

The medium-truck line at Pontiac East will be shut down early next month, and production at Pontiac Central is scheduled to start in March, Coletta said.

Pontiac East, he noted, will be expanded to 2.3 million square feet with the addition of 700,000 square feet of floor space, and will include a new high-technology paint system.

When the project is completed in mid-1986, Coletta said, the plant will be a leader in vehicle-assembly technology, similar to the group's assembly plant now under construction near Fort Wayne, Ind., and a third plant operated by General Motors of Canada in Oshawa, Ont.

He added that the paint and body shops will be highly automated, using advanced-design robotics and computer-controlled equipment.

In full operation, he continued, the plant will produce about 210,000 vehicles annually on two

Rockwell marketing 'rebuild' machinery

TROY, Mich.—Rockwell International Corp. is marketing a five-piece equipment package with which warehouse distributors and OEM dealers can rebuild drivelines or fabricate completely new drivelines to OEM standards.

According to Halden L. Booth, vice president—field sales and service parts, the package includes a cut/pull/push yoke press, a dynamic balancer, a straightener/welder, a special handling cart for large drive shafts and a workbench.

He said Rockwell offers financing, and added that "the purchase price includes on-site installation, tooling and a minimum of one-week training for machine operators."

"This package offers considerable savings in both time and labor over other equipment currently in use," Booth said. "It is more versatile and widely adjustable to minimize tooling changes and physical labor. It has the potential of paying for itself very quickly."

J. David Bell, driveline product manager, said a major feature of the balancer is its ability to balance at any speed up to 3,600 RPMs.

"In operation, most drivelines rotate between 1,500 and 2,300 RPMs," he added. "However, many balancers in use today turn at only 500 RPMs. The variably faster speeds of Rockwell equipment make it possible to detect even very small imbalances."

The dynamic balancer measures the amount of imbalance at both ends of the shaft, enabling the operator to position balance weights precisely. The balancer also has an optional pickup available for use with two-piece shafts.

Booth said the machinery package has been undergoing prototype testing for more than six months.

The cut/pull/push yoke press is used to cut new tubing, hydraulically disassemble and reassemble components, dress and chamfer tubing and press bearing caps in and out.

The straightener/welder has a two-jaw chuck for use in aligning tube and joint connections prior to and during welding. The chuck reduces the amount of tooling needed to repair a wide range of driveshafts, Booth said.

The handling cart helps the operator handle larger shafts and is used to disassemble shafts, load machines and act as a steady rest.

To help warehouse distributors and OEM dealers upgrade to Rockwell's new machinery, Booth said the company will help them dispose of existing equipment.

Fruehauf/GAC joint venture is one of three in race

POVECO bids for postal order

LAREDO, Tex.—POVECO, Inc., a joint-venture company incorporated by Fruehauf Corp. and General Automotive Corp., demonstrated its JV-500 Delivery Van here in competition for a major procurement being sponsored by the U.S. Postal Service.

The JV—500 is one of three vehicles being tested at the Uniroyal Proving Grounds in Laredo.

The new-generation delivery van has been developed to replace several existing vehicles for multistop, park and loop and special-delivery routes.

The POVECO van features right-hand drive with Ford powertrain and independent front suspension. The body is constructed of aluminum and structural plastics, with corrosion-resistant paint and processes POVECO said will ensure its long-life expectancy of 24 years.

In addition to the long-life requirements set down by the Postal Service, the JV-500 features low-cost maintenance and improved fuel economy, a POVECO spokesman said.

The Ford 2.3-liter gasoline engine has an electronic engine-control system to monitor engine sensors and continually adjust combustion functions to reduce emissions while increasing generated energy.

"Noteworthy among the JV-500 operational features are driver visibility and the overall layout of the driver's compartment," the POVECO spokesman said. "This is an important safety aspect and is directly related to reducing operator fatigue.

"The arrangement of vehicle accessories and controls has been established to include a natural, sequenced working pattern," he added. "Design of the vehicle's cargo area, with access through the roll-up rear door, as well as from inside through a protective partition, provides for overall ease of vehicle operation."

The Postal Service plans a production contract for 99,150 units with option rights for an additional 59,490 units. Delivery would be 1,100 vehicles per month starting in the second quarter of 1986.

Fruehauf Corp. and its subsidiaries, affiliates and licensees manufacture truck trailers in the U.S and 32 other countries.

General Automotive manufactures vehicles and equipment for the transportation industry through subsidiary companies, including Fixible Corp.; GAC Ireland, Ltd., and Atlas International.

Postal Service testing POVECO van

The JV-500 Delivery Van developed by POVECO, Inc., a joint-venture company formed by Fruehauf Corp. and General Automotive Corp., is one of three vehicles being tested by the U.S. Postal Service at the Uniroyal Proving Grounds in Laredo, Tex.

Automotive World News

Brazilians are export experts

Europe's auto industry suffers the consequences

Each fresh news account about Brazil's expanding export operations brings into focus the fact that the South American country's vehicle market is locked to outsiders. The inevitable question: How long will Brazil's neighbors, other auto makers, and U.S. and European labor groups tolerate the one-way trade?

Fiat and Ford cars made in Brazil are sold in Europe. Mercedes-Benz truck kits flow to the U.S. Brazilian-made Chevrolet Monzas (J-cars) may soon be headed to Europe. Ford's world truck, based on the U.S. F-series chassis and European Cargo cab, will be made in Brazil and exported to the U.S., and possibly Europe, during 1985. Volkswagen do Brasil is developing a new lower-medium car to be pitched into export markets after its launch in 1985.

In return, Brazil imposes a 200 percent mark-up on car imports, which add up to just a few expensive models. Under the country's export promotion program, called Befiex, 11 percent tax breaks go to manufacturers that export vehicles and components.

Local content requirements vary, but all are high. In order to finance imports of key components, such as Ford transaxles from France, exports must exceed imports by a three-to-one ratio.

Continuation of these protectionist measures stem from Brazil's need to reduce its enormous debt burden of around $100 billion. The International Monetary Fund's intervention in February 1983 resulted in a 30 percent devaluation of the cruzeiro, and domestic price controls for an 18-month period. An inevitable result was a sharp increase in exports, including oil barter deals such as those between Volkswagen and Iraq and Nigeria.

These schemes are mutually beneficial (Brazil has no oil of its own), but are significant in another respect. They represent markets lost to European manufacturers which previously held them. The effect on employment and component sourcing in Europe is part of a broad and changing pattern as less developed nations take a larger share of world manufacturing.

Brazil has four main passenger-car makers—General Motors and Ford Motor Co. from the U.S., and Europe's Volkswagen and Fiat groups. They also produce light, medium and heavy commercial vehicles, although the medium, heavy and bus sectors are dominated by Mercedes-Benz. Sweden's Saab-Scania and Volvo groups concentrate on heavy vehicles.

Two notable absentees are Renault (France) and the Japanese. Toyota has a tiny operation that produces less than half a percent of Brazil's vehicle volume.Renault was present many years ago until it sold out to Ford, and its recent attempts to return have been thwarted. Since it would cost financially stricken Renault an estimated $1 billion to invest in a Brazilian operation, an early return is unlikely.

Chrysler Corp. sold its Brazilian business in the late 1970s to Volkswagen, which concentrates its truck production there.

Brazilian vehicle production peaked in 1980 at 1,165,000. Economic problems caused steep declines the following two years. There was a small recovery in 1983 to 896,300 units. Volume the first nine months of 1984 was down 6.6 percent, at 638,100, from a year earlier.

Most of the industry is centered around Sao Paulo, the Detroit of Brazil. Total employment is about 100,000, three-fourths what it was in 1980. An auto worker in Brazil works a 45-hour week, earning $3 to $4 an hour including benefits. Because of high unemployment and low wages, factories are not highly automated except for Ford's facility. Among major producers, only Fiat works just one shift, but introduction of its Uno car last fall and an ambitious export plan should result in two shifts soon.

Retail prices of Brazilian-made vehicles in export markets are about 35 percent below those of comparable models in Brazil. To a large extent this depends on exchange rates, however, and there are signs Brazilian-made vehicle prices are edging up toward European-produced models.

Volkswagen is the country's largest producer of passenger cars: 333,500 in 1983, about 43 percent of the total. GM made 187,700 (24 percent), Ford 134,800 (17 percent) and Fiat 115,800 (15 percent).

Fiat is the major light-truck producer (30,200 in 1983), followed by Ford (22,500) and GM (17,700).

Anfavea, the Brazilian manufacturers association, combines medium and heavy trucks in its statistics. Mercedes-Benz (17,100) is the main producer, followed by Ford (8,400) and VW (4,100). Scania, Volvo and Fiat numbers are smaller, but they sell well in heavy categories. Mercedes-Benz (5,200) produces more than four of every five buses made in the country.

Mercedes and, on a smaller scale, Fiat have enjoyed commercial-vehicle export success. For others it's been more a matter of catering to domestic demand. This may change, though, especially if world truck demand picks up, and Ford succeeds with its plan to use Brazil as an export base for trucks. The U.S. is a prime export target for the new Ford model which uses the European Cargo cab, a U.S.-style chassis and a diesel derived from a Brazilian tractor engine. Production is expected to start in early 1985.

GM may be thinking along similar lines, by possibly exporting a new Brazilian-made truck to the U.S. starting in early 1986. It's also believed GM do Brasil will begin making the four-wheel-drive Chevrolet Blazer before then, for the Brazilian market and export to the Middle East and Europe.

In the first nine months of 1984, vehicle exports netted Brazil $1.2 billion. Component exports added one-third more. Volume of shipments totaled 142,200 units, with Fiat (54,300) the leading exporter; its mainstays, apart from engines used in Italian-built cars, are the Panorama and 147 models, both based on the old 127. There was a drop in Fiat volume recently, but it's expected to increase substantially when Uno production is in full swing. Ini-

Continued on Page 42

Ready for export from Brazil to Europe, Ford Escorts are shipped to Norway, Finland, Sweden and Iceland, and will be introduced in Denmark, Greece and Switzerland.

The Brazilian-built Chevrolet Monza (identical to the Opel Ascona) is being tested in Sweden this winter, and is expected to be exported to Europe starting in September 1985.

Spain built its 500,000th Opel Corsa on Nov. 26, 27 months after production began.

Into politics

Vittorino Chiusano, president of Fiat-France, resigned to devote full time to his duties as a member of the European Parliament. His successor at the auto company is Giorgio Frasca.

German drop

Production of cars and station wagons in West Germany in the first nine months of 1984 fell 7.2 percent from a year earlier to 2.67 million units. The metalworkers strike was the cause. German vehicle exports were down only 4.3 percent.

Heavy numbers

Heavy trucks will be subject to a 40-tonne limit in the European Community, although the U.K. and Ireland will retain a 30-tonne figure. Still to be settled is the controversy over numbers of axles.

Nissan in India

India's new Premier car, based on the Fiat 124, will use Nissan engines starting next spring.

More LPG

Landi of Italy and Solex of the U.K. will be partners in a bid to boost sales of liquified petroleum gas (LPG) conversion kits. Main markets will be Italy, Holland and France. North American sales are being contemplated.

Peugeot wants cash

Peugeot Group is asking the French government for $210 million in low-interest loans. The money is needed to modernize the Aulney-sous-Bois factory north of Paris, where the forthcoming Citroen AX small car will be built.

Volvo goes for it

Sweden's AB Volvo wants to acquire the 17 percent share it does not already have in oil-trading company STC.

VW cuts loss

Volkswagen Group made a profit in first-quarter 1984, lost money in the second quarter due to the West German metalworkers strike, but made a profit again in the third quarter, and its nine-month loss of $1.55 million is one-fifth that of a year earlier.

French prices up

The French government, which controls prices of its domestic auto companies, allowed a two percent increase starting Dec. 15. A depressed French market is hampering revival plans of Renault and Peugeot.

Expecting an upturn

West German engineering group GHH, owner of truck and bus maker MAN, forecasts a return to profitability in 1984. MAN has been the main reason for the group's poor financial showing in recent years.

Brazil

Continued from Page 41

tially, Uno is made only as a three-door, but a five-door will follow in 1985. While Fiat is well represented with small cars in Brazil, it is weak in medium and larger-size models. No decision on expanding the line has been made, but some action seems likely.

Volkswagen do Brasil exports in January-September 1984 were 40,600. Its main activity is in Africa and the Middle East, though the Beetle still finds its way to Europe. VW do Brasil is developing a new model to fit between the Beetle and Gol (a South American version of the Golf with air-cooled engine). An announcement is expected in 1985. While Wolfgang Sauer, president of VW in Brazil, has gone on record as saying the car will be exported in substantial numbers to Europe, VW officals in West Germany insist it will not, maintaining it will go to what are becoming VW do Brasil's traditional export markets, Africa and the Middle East.

Biggest export growth in recent months was made by Ford which shipped 24,500 in the first nine months of 1984 compared with 13,900 in entire 1983. The growth pattern is expected to continue. Distribution of Brazilian Escorts in Norway, Sweden and Finland at the start of 1984 was followed by its introduction in November in Denmark (a European Economic Community member) and Switzerland. Ford officials in Europe deny Brazilian reports that the next market will be Greece, another of the 10-member EEC.

GM still produces the venerable Opel Rekord in Brazil under the names Chevrolet Opala, Commodore and Diplomat.

Escorts were introduced in Scandinavia at a price about 15 percent less than a German-made model, and sales took off. Today, however, prices are only seven percent less.

During 1985 Ford expects to export 35,000 Escorts, about one third of capacity. The sensitive area will be Denmark (and possibly Greece), where neighboring auto workers in Germany, Belgium and Britain will note the steady erosion of markets in what is—by common definition—their own backyard. Ugo di Stefano, Ford's Brazilian export-operations manager, acknowledges there may by repercussions.

According to Brazilian sources, Ford will broaden Escort's appeal in the next few months by introducing Ghia, Cabriolet and XR3 versions of the Brazilian Escort. These also will be exported.

For the 1986 model year, Ford is believed to be working on greater design and engineering commonality for the facelift of the Escort it makes in North and South America and in Europe. There now are many technical and styling differences; greater uniformity would make it simpler to sell one area's products in other regions. However, it also would open the question of whether South American models could be sold in North America. Ford European officials deny South American reports that Sierra will be made in Brazil. (It now is assembled in Argentina from German kits.) It is believed Sierra will replace the local Corcel in 1987, and will be sold in European and U.S. export markets.

An interesting point is where GM plans to export its Brazilian-made J-car. Chevrolet Monza, a sales success in Brazil, may enter Scandinavian markets alongside its German-made twin, Opel Ascona. GM officials maintain no decision has been made, but the fact that winter testing is going on in Scandinavia, and that the car is sold in Iceland, suggests GM is headed down that road. The belief in South America is Monza will go on sale in Scandinavia next fall.

GM has two concerns over such a move: upsetting its established sales and marketing policy in Europe, i.e., Opel and Vauxhall networks; and pricing Monza attractively compared to the-tried-and-trusted Opel models. As Ford hikes Escort prices, GM's job becomes harder.

Any move by GM to sell South American products in Europe would correspond with efforts to boost the volume of its international export sales with Brazilian, Japanese and South Korean-made products, provided they carry U.S.-style labels such as Chevrolet. The strength of the U.S. dollar has hurt exports of U.S.-made models, and GM wants to recoup those losses.

In trade of a different kind, Brazilian sources indicate, GM do Brasil will turn to Opel for its products in the late 1980s and early '90s. They would replace Opala and Commodoro with something akin to the Opel Senator, and replace Chevette with a model like the Opel Corsa.

All this increased export action poses still another problem for Brazil. The country lacks the harbor facilities to handle projected volumes, and may have to build a special harbor near Sao Paulo to handle large transport ships.

Coffee, tea, cereal, cars?

Supermarket chain sells Austin Rover automobiles

By Richard Feast
European Editor

Selling cars alongside groceries in supermarkets isn't new. Plenty of shopping malls have auto showrooms and displays.

But Britain's Austin Rover Group (ARG) and Massa, the West German supermarket chain, are adding a new dimension. Massa will have 22 outlets operating in early 1985, providing a full sales, service and parts operation, plus the enticing prospect of servicing vehicles while the owners shop. In the first two weeks following the opening of 18 sites in West Germany in late October, Massa sold more than 500 cars. That's impressive considering ARG's entire 200-dealer network sold just 5,650 units the first nine months of 1984.

Says an ARG official: "It's been more successful than any of us dared hope." Morever, while there was some initial animosity from established dealers, it's subsided because they apparently have benefited from increased consumer awareness of Austin Rover products.

Massa expects to sell 4,500 vehicles, worth an estimated $23 million, in 1985. Alfred Massa supermarkets, concentrated in the central part of the country, have annual sales of more than $1 billion and employ about 8,600 people. Creating ARG showrooms and service facilities at 21 locations represents an investment of $6.6 million. For ARG that means adding a much-needed 10 percent to its dealer network in a nation where its recent sales have been poor. The West German new-car market is Europe's largest at about 2.4 million units in 1984. While ARG's share improved this year, it is still only 0.3 percent. "The German market represents, to us, the biggest opportunity of all in Europe, and we are giving it total commitment," says Mark Snowdon, recently switched from managing director-commercial to managing director-product planning of ARG.

As a group, Austin Rover depends heavily on the British market, where it is under constant pressure from Ford Motor Co. and General Motors' Vauxhall Motors Ltd. Now ARG is making a stronger export push, Snowdon declaring: "A key part of our strategy to obtain volume growth is an increase in export sales. While there are still opportunities for reasonable growth in the U.K., the market is not going to provide adequate growth by itself."

At current annual production of around 450,000 units, Austin Rover is making a small profit. But the need for 700,000 sales a year is apparent, and the weak links are the rest of Europe and the U.S.

In a few weeks, ARG's U.S. distribution plans for a car it is jointly developing with Honda are expected to be aired. The model will be introduced in first-quarter 1986. Until then ARG's export effort will be concentrated on mainland Europe.

Celebrating the opening of the first Massa outlet to sell and service Austin Rover Group products are, left to right: Bert Lawrence, ARG director of product and marketing affairs; Huw Jones, Austin Rover-Germany managing director; Georg Faber, Austin Rover-Germany sales and marketing manager; Wilfried Bechtolzeimer, Massa managing director; and Mark Snowdon, ARG managing director-product planning.

More modern and higher quality ARG products in France and Italy have been rewarded in those two important markets. ARG sold 30,400 units in France in 1983 and expects to boost its market share to 1.8 percent in 1984. Sales were 27,100 units in Italy in 1983, but came under heavy pressure from Italy's domestic auto makers this year, and market share probably will drop to 1.4 percent.

While its German sales are up in 1984, volume started from a low base (4,700 units and 0.2 percent market share in 1983). Sales in Belgium are up this year, but down in Holland. Spain, another major market, allows only a handful of imports under a strict quota system.

In contrast, ARG's U.K. sales in the first 11 months of 1984 were 301,400, 18 percent of the market, outpaced by Ford (28 percent) but still ahead of Vauxhall (16 percent), which is becoming more competitive.

The Massa deal indicates ARG is ready for an aggressive and original export thrust, although there is hesitancy about going the supermarket route in other countries. However, the concept appeals to Huw Jones, managing director of the local import company, who maintains, "For us, Massa represents the modern market place, the latest in the line of traditional markets that correspond to the horse or cattle markets of the 18th century. It is the point where, in 1984, people come to do their shopping. It is normal to be there."

Massa attracts 100,000 shoppers daily to its stores, the kind of captive audience that may be too much for not only ARG, but other auto makers, to ignore in other countries.

874,290 is total for September

Month's registrations up 19 pct.

By Jenny L. King
Detroit Reporter

Total U.S. new-car registrations in September soared 18.92 percent above the number for the same month a year earlier. Registrations in the ninth month likewise were up compared with August, and the year-to-date total was a full 35 percent ahead of the first nine months of 1983.

According to figures compiled by R. L. Polk & Co., 874,290 new cars were noted on the books in September, up 2.65 percent from 851,715 the preceding month and up 18.92 percent over the 735,167 reported in September, 1983.

Imports were up in numbers September to September, but, as has been the pattern throughout 1984, their penetration was on the decline. For the month they lost 1.70 percentage points, down to 26.42 percent from 28.12 percent. Year-to-date share for imports was off 3.66 percentage points, to 24.61 percent from 28.27 percent.

Domestic registrations were up 3.09 percent from the August level, to 643,261 from 623,957. Compared with the year-earlier total of 528,420, they were up 21.73 percent.

Import numbers in September were up 11.74 percent, to 231,029 from 206,747. After nine months their total climbed 1.52 percent, to 1,881,318 from 1,853,210.

September saw General Motors accept a smaller share of the market than it had claimed a year earlier. Suffering the after-effects of a brief UAW strike, GM was down 1.69 percentage points, to 41.77 percent from 43.46 percent.

Its loss, added to that of the imports, bolstered the positions of American Motors, Chrysler Corp. and Ford Motor Co. Ford gained 1.92 percentage points, growing to 19.39 percent from 17.47 percent. Chrysler was up to 9.57 percent from 8.48 percent, and AMC gained 0.39 percentage points, moving to 2.85 percent from 2.46 percent.

The market-class breakdown in September, 1984 vs. 1983, showed a rather dramatic shift out of the intermediate and imports segments, into competing sizes. While U.S. intermediates shrank to 21.41 percent from 27.88 percent and imports slipped to 26.42 percent from 28.12 percent, subcompacts, compacts, standards and luxury models increased their presence.

Subcompacts climbed to 13.13 percent from 10.36 percent over the 12 months. Compacts grew to 18.49 percent from 15.59 percent. Standard-size cars were up to 12.17 percent from 11.99 percent and luxuries claimed 8.36 percent, up from 6.60 percent.

Excluding imports, the breakdown included: Subcompacts

Table on Page 66

growing to 17.85 percent from 14.41 percent; compacts up to 25.14 percent from 21.69 percent; intermediates skidding to 29.10 percent from 38.78 percent; standards slipping to 16.54 percent from 16.69 percent, and luxuries up to 11.37 percent from 8.43 percent.

Total new-car registrations in the U.S. for the first nine months of 1984 were up 16.60 percent from 1983, growing to 7,644,804 from 6,556,402. Registrations were up 35.15 percent placed beside the 5,656,444 for the same period in 1982.

Domestic registrations through September climbed 22.54 percent, to 5,763,486 from 4,703,192. They were up 45.48 percent from the 3,961,614 posted two years ago.

Imports, up 1.52 percent in numbers, to 1,881,318 from 1,853,210, plunged 3.66 percentage points in market penetration during the nine-month period.

Ford increased its year-to-date penetration by more than two percentage points and GM was up 1.82 percentage points. Ford finished the first nine months with 18.80 percent of the total market, up from 16.80 percent. GM had 45.25 percent compared with 43.43 percent a year earlier.

Chrysler stayed at 9.35 percent of the market while AMC was down 0.23 percentage points, to 1.91 percent from 2.14 percent and miscellaneous domestics were erased, to 0.00 percent from their former 0.01 percent.

Mazda dealerships offer new line of accessories

LOS ANGELES.—Mazda Motors of America (Central) and Mazda Motors of America (East), the two Mazda importers for the U.S., have begun a new vehicle accessories marketing plan, called Mazda Finish Line, offering accessory items through Mazda dealers.

The program brings together and makes available through Mazda dealers, for the first time, optional factory equipment such as upgraded vehicle audio systems, air conditioning, cruise control and wire wheel covers.

All items included in the program will be specially packaged and promoted, using the checkerboard Finish Line graphics.

The importers said that dealers in the past have been missing part of the accessory market that has traditionally been left to the aftermarket. Offering select Mazda accessory items direct from dealers will benefit customers as well as dealers, the importers said.

Finish Line products are designed for both new and older vehicles, said Frank Garard, group vice president, service, parts and consumer communications, Mazda Motors of America (Central).

Garard said the importer's marketing research has shown that accessories purchases don't peak until a vehicle is three years old.

Mazda will back the new program with a marketing campaign developed with Foote, Cone and Belding, Inc.

The Finish Line name and checkered flag graphic were chosen to reflect Mazda's success in motor racing and to connote a sense of quality, excitement and value, the importers said.

New products available for the RX-7 sports car include body styling pieces such as a polyurethane front air dam, a Corex rear spoiler and a brushed-finish, stainless steel roof band.

Also available for the RX-7 are a scratch-resistant tempered safety glass Moon Roof, rear window louvers, vinyl front body mask and halogen fog lamps.

Mazda 626 accessories include a polyurethane front air dam and lightweight aluminum rear wing, rocker panel moldings, center armrest with hidden storage area and fitted car covers.

GLC owners can choose items such as passenger side mirrors, digital clocks, wire wheel covers, air conditioning and cruise control.

One-piece polyethylene copolymer bed liners are available for the B2000 pickup.

Casement promoted at AMC dealership

DENVER.—Steve Casement has been named vice president of Colorado AMC-Jeep-Renault here and has assumed an ownership interest in the dealership.

Casement had been the firm's general sales manager.

Truck sales are next to best

Continued from Page 1B

all market segments and all eight weight classifications.

Light-truck sales were up 29.8 percent to 3,816,124 units, compared with the year-earlier 2,940,751. Mediums totaled 60,903, a gain of 27.7 percent over the 47,693 sold in 1983. Heavies rose 52.7 percent, 215,352 versus 141,030.

The number of unsold trucks in retailers' hands on Jan. 1 also was considerably higher than the previous year.

Dealers had 783,295 units in inventory at the start of the year, up 34.2 percent from the year-earlier 583,746.

Light-truck stocks totaled 720,875 on Jan. 1, a gain of 31.9 percent over the previous year's 546,430. Mediums were up 48.8 percent, from 9,230 in 1983 to 13,731. Heavies gained 73.4 percent, 48,689 versus 28,086.

Big Three truck dealers retailed 3,127,447 units during the year, an increase of 24.4 percent over the previous year's 2,514,871, with good gains for all four truck operations.

Ford's 1984 sales were up 17.6 percent over the previous year, 1,166,715 versus 991,958, while the Chevrolet total of 1,111,839 for 1984 was 12.9 percent higher than the previous year's 984,587.

In the final month of the year, Ford dealers retailed 80,399 new trucks, down 16.6 percent from the year-earlier 96,378. Chevrolet sales in December were off 13.3 percent, from 91,770 in 1983 to 79,606.

Dodge and Chrysler-Plymouth dealers retailed 44,133 units in the final month, an increase of 51.1 percent over the previous year's 29,202. Through December, the total was 526,054, up 91.9 percent from the year-earlier 274,178.

The Chrysler minivans—Dodge Caravan and Mini Ram Van and Plymouth Voyager—accounted for 36.2 percent of the company's 12-month total, with 190,516 sales in their first full year in the market.

GMC Truck & Coach Operation reported that 1984 was its second-best year with 322,839 sales, an increase of 22.2 percent over the year-earlier 264,148. The alltime GMC high of 351,257 sales was established in 1978.

In December, GMC dealers retailed 22,823 new trucks, a decline of 3.7 percent from the previous year's 23,708 units.

Sales of Jeep four-wheel-drive vehicles in 1984 also were the second-highest in the firm's history. The 12-month total was 153,801 units, an increase of 87.2 percent over the year-earlier 82,140. The record—161,912 sales—was set in 1978.

The downsized Cherokee and Wagoneer accounted for 57.2 percent of Jeep's 12-month total with 87,943 sales. In December, dealers retailed 14,186 vehicles, up 34.4 percent from the year-earlier 10,555, and the downsized models accounted for 64.3 percent of the total with 9,116 sales.

Sales of the compact Volkswagen front-wheel-drive pickup truck in 1984 totaled only 389 units, compared with 4,861 in 1983. The truck no longer is in production, and no sales were reported in the last two months of 1984.

All five U.S. distributors of the non-captive Japanese compact trucks reported record sales for 1984.

Toyota dealers retailed 264,183 units in the 12-month period, an increase of 54.4 percent over the previous year's 171,052 units. In December, a record 25,312 vehicles were sold, up 40.4 percent from the year-earlier 18,024.

Through December, Nissan/Datsun sales totaled 203,724 units, a gain of 48.3 percent over the year-earlier 137,355. The count included 95,162 trucks built in the Nissan plant in Tennessee.

In the final month of 1984, dealers retailed 16,936 vehicles, up 58.4 percent from the previous year's 10,694. Included in the December total were 8,192 U.S.-produced trucks.

Mazda dealers sold 119,127 small trucks in 1984, an increase of 56.4 percent over the year-earlier 76,150. The December total was 9,843, up 8.4 percent from the 9,078 retailed in the same month in 1983.

Through December, Isuzu sales soared 73.1 percent to 45,379, compared with 26,211 in the like period the previous year. During the month, dealers retailed 5,413 units, an increase of 51.4 percent over the year-earlier 3,575.

Mitsubishi's 12-month sales totaled 17,613 units, a gain of 89 percent over the 9,317 retailed in the like period in 1983. The December count was 2,106, up 84.4 percent from the year-earlier 1,142 units.

Hoping to set a record

Rudi Lins and Gerhard Plattner plan to make the fastest bus ride around the world in this Volkswagen bus. It is a rear-engine, four-wheel-drive model.

'Thinking' 4WD available for VW light commercials

VIENNA.—A new world record is in sight for Rudi Lins and Gerhard Plattner, holders of many long-distance world records in Porsches.

This time they are on the road with a Volkswagen bus, planning to do 28,000 miles by May, passing through 34 countries and touching all five continents.

If successful, the trip by Lins and Plattner will be the fastest drive through all five continents and the fastest bus ride around the world. Starting from Graz, Austria, the route takes them through the arctic and the tropics and, in North America, through the U.S. and Canada.

Their VW bus is one of the first four-wheel-drive VW commercials to be produced. VW is the first European manufacturer to offer a light commercial van and bus with "thinking four wheel drive."

Production has just started in the Steyr-Daimler-Puch plant in Graz.

The "thinking four-wheel drive" was developed in the Steyr-Daimler-Puch-Werke in Graz, in line with four-wheel-drive development work done for Mercedes, Steyr-Daimler-Puch itself, Fiat, Honda and other car makers.

The VW four-wheel drive is unique, as it is rear-engined. The propeller-shaft connecting the front wheels is not engaged and disengaged by the driver but automatically. It is, as VW R&D Chief Ernst Fiala describes it, hydrokinetic mesh.

Basically, only the rear wheels are powered but as soon as one of the wheels shows the slightest tendency to slip, the four-wheel drive is engaged and held as long as deemed necessary by the hydraulic and electronic devices. Because of the hydraulic change from two-wheel drive to four-wheel drive and back, the change is not noticed by the driver except for a little controlling light.

VW is offering all its rear-engined light commercials in this four-wheel-drive version.

VW hopes to sell 10,000 four-wheel-drive light commercials a year worldwide.

'87 GM pickups will be built in renovated plant

Continued from Page 1B

shifts.

Consolidation of the medium and heavy-truck assembly at Pontiac Central allows better use of existing space, according to Coletta.

"At the same time," he said, "the move allows us to incorporate new technology into the production process for the medium trucks."

Employes moving to Pontiac Central with the medium-truck assembly will receive at least 40 hours, Coletta said, and those hired to work in the new pickup plant in 1986 will participate in at least 120 hours of training before going to work.

AT THE NADA CONVENTION

THE NORTHWOOD IDEA IS WORKING—
FOR ALL LEVELS OF PERSONNEL!

- **ACCREDITED DEGREE PROGRAMS**—Two year associate automotive marketing and management—only one of its kind in North America. Taught by experienced professionals; supported by dealer advisory committees. Other career-oriented curriculums including computer science, offered in two and four year academic programs. Also, external degree plan or study available.
- **SEMINARS/WORKSHOPS**—On and off campus. Customized automotive marketing, management and aftermarket courses—at locations convenient to the sponsoring organization.
- **CORRESPONDENCE COURSES**—Available in most automotive subjects. Comprehensive course material complete with approved textbook and study guides. Successful completion qualifies toward N.A.D.A approved automobile (CAM) and/or truck (CTM) merchandiser certification.
- **NATIONAL PLACEMENT SERVICE**—Talk with our representatives at the N.A.D.A convention to set up appointments with students attending or contact our national placement service office in Midland, Michigan for information regarding available personnel.

Air-bag Tempos get good marks in safety tests

WASHINGTON.—Tests of the Ford driver-only air bag in 1985 Tempo four-door sedans show great life-saving potential, with or without use of the three-point belt. Somewhat surprisingly in these single tests, the head injury criteria level is better with the unbelted dummy.

These two tests made by Ford are part of the company's contract with the government to provide 5,000 Tempo/Topaz cars with driver air bags, 5-MPH bumpers and high-mounted stop lamps.

The air bags are only supplemental since the cars are certified to meet Standard 208 because they contain the usual three-point active belt systems which have to meet only static ("pull-and-stretch") tests.

Head Injury Criteria reading for the unbelted dummy was 377; chest deceleration reading was 52 Gs.

Head Injury Criteria reading for the belted dummy was 540 and chest reading was 52 Gs—the same as for the unbelted dummy.

A reading of 1,000 HIC and 60 Gs on the chest are generally taken to mean survival of a human being.

Dummy kinematics were roughly the same: Deployment at 24 and 25 milliseconds, full inflation at 43, knee contacts instrument pannel at 43 and 45 and head contact with the air bag at 49 and 53 milliseconds.

Would you believe 16-valve heads for Chrysler fours?

Shelby hunts 'cheap performance'

By Dan McCosh
Detroit Reporter

Chrysler Corp. performance guru Carroll Shelby says he wants to concentrate on "cheap performance," eschewing a head-to-head conflict with General Motors, Toyota's mid-engine sports cars and Ford Motor Co.'s plans for upscale sports cars from Europe.

"Pontiac could build a Fiero that would *bleep* on a Ferrari for $15,000," Shelby told the Detroit Auto Writers Group recently, explaining why he was more interested in seeking low-volume, specialized niches rather than building a ground-up sports car for a rapidly-crowding market.

Shelby, a consultant to Chrysler developing specialized performance cars, recently developed a 146-HP turbocharged version of the Dodge Omni GLH. Shelby also is responsible for special projects such as the Chrysler XT LaserCoupe, originally due this spring. Shelby said the XT project has been delayed problems can be worked out with the drivetrain.

Giving some hints about other projects in the works, Shelby said his company, Shelby American, Inc., Gardena, Calif., has tested:

1. A four-wheel-drive version of the Laser/Daytona (Chrysler G-bodies).

2. 4WD minivans.

3. 4WD Dodge 600-series sedans.

4. 16-valve heads for Chrysler's 2.2-liter and 2.5-liter four-cylinder engines.

In rapid-fire appraisals of current technical trends, Shelby was enthusiastic about multi-valve heads ultimately replacing turbocharging as a route to higher horsepower.

"There are lots of reasons. The combustion is cooler. You can get away from turbocharging. A 2-liter engine with a four-valve head can do the work of a 1.5 liter with turbocharging. On an extended warranty, you don't have all the warranty problems you get with the electronics you need for turbocharging."

Shelby said Chrysler will have a four-valve head on the market "in a very short time."

He also mentioned that Chrysler President Harold A. Sperlich recently was present in Italy at Chrysler's new European partner, Maserati S.p.A., viewing a 3-cylinder engine with five valves per cylinder developed by Alejandro De Tomaso that develops 195 HP and 225 pounds-feet of torque. He predicted the radical new engine could show up in a joint Chrysler-Maserati project sometime in the future.

But Shelby also hinted Chrysler is cooling on the development of a two-seat sports car via the Maserati venture. "There are a *lot* of sports cars out there," he said. "Maserati has a (luxury) connotation," he said.

Future performance cars may well be assembled in small assembly lines outside the major manufacturing plants, he added, indicating he was interested in adding such an operation to his far-flung enterprises, which include specialty cars, Texas chili and a newly introduced taco sauce.

Lawsuit seeks to halt deal on DeLorean ranch

By Matt DeLorenzo
Los Angeles Reporter

SAN DIEGO.—A lawsuit seeking to stop the transfer of John Z. DeLorean's ranch near here to Howard Weitzman, who represented the former auto maker in his drug trial, has been delayed until Feb. 26 while attorneys for both sides work on a settlement.

The suit was filed in federal court here by D. W. Allard Jr., trustee for the defunct DeLorean Motor Co.

During a pretrial hearing last week, Jack Gray, an Atlanta attorney representing the trustee, told Judge J. Lawrence Irving he is working on a settlement with Weitzman and asked for the delay. If a settlement is reached, Gray said it would have to be aproved by bankruptcy court in Detroit, where Chapter 7 liquidation proceedings are ongoing.

The main thrust of the trustee's case is that the transfer of DeLorean's Pauma Valley ranch (which has been valued at various times between $2 million and $5 million) to Weitzman to cover legal fees is excessive compensation.

Also at pretrial hearing, a motion to have Weitzman disqualified as an attorney in the case was denied, and it was stipulated that depositions taken from DeLorean would remain under seal.

Judge Irving also instructed that any future motions or filings in the case be made by Gray. Referring to several other motions filed by Sheldon Toll, the Detroit attorney for the trustee, Irving said it appears attorneys for the creditors may be hounding DeLorean.

Sport Chevrolet cares

Robert Fogarty, center, Sport Chevrolet, Silver Spring, Md., receives a "C flag" (C for caring), symbolizing a citation from President Reagan in recognition of the dealership's service to the community. James K. Coyne, left, special assistant to the President for the Private Sector Initiatives Program, and Peter Ueberroth, chairman of the 1984 Olympics and now commissioner of baseball, made the presentation. Sport Chevrolet sponsors an extensive program of aid to handicapped persons.

Biggest transformation since days of Durant and Sloan

GM: A new global conglomerate

Continued from Page 1

conglomerate, which already includes equity investments in artificial intelligence and machine vision companies. GM has also set up a Military Vehicles Operation to study military business.

It would be logical for GM's future investments to include aerospace and financial service acquisitions which will circle the automotive business like the rings of Saturn.

"The recent investments are both vertically and horizontally integrated but it goes even farther," said Maryann Keller, an auto analyst and director of Vilas-Fischer Associates. "GM will need computers in the future and the new business will likely be related to what GM already has.

"If you put the auto business at the center of the corporation and then draw arrows from the present investments, they not only point toward the center but off into business outside GM and also point to one another."

Smith has reportedly been making the rounds in the defense and aerospace industries seeking some kind of merger or equity situation. A deep involvement in aerospace could lend new meaning to Chrysler Chairman Lee A. Iacocca's forecast that GM would become Global Motors with the Toyota joint venture.

GM now has the potential of becoming intergalactic. GM will be launching its own satellite in the near future, allowing it to be possibly the second largest commercial phone company in the world.

One of the most interesting aspects of GM's recent investments is that it has not gobbled up companies, but instead has left them to improve their own earning power and creativity. It has not stifled those companies by making them a part of such a large corporation, Keller said.

Even Electronic Data Systems, which GM bought for $2.55 billion, has its own stock, which creates incentives for it to add business outside of GM.

GM's existing automobile business and its existing financing subsidiary, General Motors Acceptance Corp., will be used as integral parts of the conglomerate as well as providing the means for acquiring additional pieces. Those could include an acquisition in the aerospace frontier, more military business and business expansions in GMAC.

GMAC, which has made no acquistion in the financial services area, is likely to move in that direction. A strategic planning team was formed last fall at GMAC to explore additional business opportunities.

• GMAC and the automotive groups are the cash cows, providing the financial ability for GM to acquire new business interests, while the newly acquired EDS is the thread that ties the whole network together.

The new Saturn Corp. is the classrooom to test the new business concepts and build a car which will be marketed as "one of a kind" in a separate showroom.

EDS is building for GMAC a new data processing system that will take GMAC into the deregulated environment of the 1980s and 1990s. GMAC already is the largest finance company in the U.S. In 1984, it became the first to hit the $1-billion-asset mark. It has 300 branches.

EDS is the expert in the financial services field with a third of its business falling into that category.

The system EDS will build for GMAC, whose business so far has been primarily providing loans for GM car buyers, ultimately will cut the costs of GMAC's business while providing improved and expanded services. The system may involve one-stop shopping for car loans and insurance with instantaneous credit approval and electronic transfer of funds.

Undoubtedly, GMAC will have the ability to do even more.

On the manufacturing side, GM will be the leader in moving the auto industry from a labor-intensive industry to an information-intensive industry, some say.

GM is becoming the computer lexicographer for the automobile industry and, perhaps ultimately, for the manufacturing world. It already has set the communication standards on the factory floor. Now it is setting the standard for how the industry communicates with it suppliers, a standard that may eventually spread to the rest of the manufacturing world.

Ford Motor Co. and Chrysler Corp. have already met with GM to create a common computer language for suppliers, which likely would be provided to the supplier by EDS. It is possible, then, that EDS could wind up as the provider for the entire auto industry.

GM is also establishing a similiar computer network for its dealers which would connnect them directly with the factory floor.

GM is negotiating a new dealer franchise agreement and that, some sources say, will give the corporation more control over the dealer. GM may be able to decide where a franchise could be located, what equipment will be needed and what kinds of training new employes will need. It may give the company more control over the customer's financing arrangements.

GMAC's new system may be able to offer the customer a better rate in exchanage for the customer allowing GMAC to electroncially deduct their car payment from their bank account, cuttting costs and paperwork.

Saturn will be the culmination of all of these things and will represent the latest in worker training, high-tech and automation.

Joseph Sanchez, president of Saturn Corp., said that within the next three years, the customers will be able to buy insurance to guarantee the workability of their GM vehicles.

"It will be a function of the cost of that car," he said.

That is another peg in the one-stop shopping theory of buying a car.

The new Saturn Corp. is not only GM's classroom but is also the vehicle being used to tell the rest of the world that the Henry Ford days of auto assembly are over. The modular components expected in the first vehicles from that newly formed company offer new ways to design and assemble vehicles, cutting both cost and time from drawing board to delivery.

Once the Saturn plant is built, suppliers may be under the same roof as the assembly plant and all its workers could end up being salaried, which would cut labor costs.

The reorganization of the car groups is the crux of the entire business philosophy. It has streamlined operations, eliminated duplication—which cuts costs—and left the door open for the divisions to create their own companies outside of GM, and that generates more money.

GM is not sparing any money in making its two auto groups powerful. The groups are Chevrolet-Pontiac-GM of Canada (CPC) and Buick-Oldsmobile-Cadillac (BOC). GM will spend $6 billion to $7 billion a year for the foreseeable future for modernization, innovation and new plants.

"Five years ago, GM was only an auto company lumped in with Ford and Chrysler and distinguished only by its size," Keller said. "In the past, GM was like a great, big plum, ripe for picking and everybody scratched a little off. GM was slow to react."

Five years ago, the recession hit the auto industry, and GM's leaders took advantage of it. They figured out what was wrong with the company and began to change it.

A similiar situation hit GM during the early days of Durant and Sloan, and their new business theories pulled GM out of the mire.

Durant was thought of as the dreamer, the visionary, but without pragmatism. Sloan was also a visionary but he was a manager, a pragmatist and an organizer.

Smith is also considered by many to be a visionary with big dreams but is also pragmatic, as is McDonald.

Smith also seems to be a student of history.

"I have always believed in planning big," Sloan said in his book, My Years with General Motors, "and I have always discovered, after the fact, that, if anything, we did not plan big enough."

Pontiac studies new type of station wagon

Continued from Page 3

handling characteristics, package size and so forth.

Pontiac also hopes to improve its sales from about 700,000 in 1984 to about 800,000 units in 1985, with the Grand Am accounting for all of the 100,000 increase. Pontiac sold 704,684 cars in 1984, up 27.4 percent from 1983. The Pontiac Sunbird was the division's best seller in 1984, followed by the 6000, Firebird and Fiero.

But, Losh said, the outlook for the industry is basically flat for 1985 with improvement of only a point or so.

obituaries

James L. Conlon

COLUMBUS, O.—James L. Conlon, 89, retired general manager of General Motors' former Buick-Oldsmobile-Pontiac Assembly Division (the division later became GMAD), died here Jan. 14. Mr. Conlon began his GM career in 1925 as an hourly-rate employe. From 1949-52, he was general manager of Ternstedt Division. He was named to the B-O-P Assembly Division post in 1952 and retired in 1960.

Exclusive Rolls-Royce facility

McGinnis Rolls-Royce has opened its full-service facility in Houston. Previously, the facility was housed at McGinnis Cadillac Rolls-Royce.

AMC stockpile balloons; promotional fiasco blamed

Continued from Page 67

Jeep line. Jeep sales last year totaled 153,000, an increase of about 90,000 over the previous year. But continued weakening of the domestic subcompact market class has created problems for AMC's passenger car line.

Supply of the Alliance subcompact climbed from 84 days on Dec. 1, 1984, to 147 on Jan. 1, 1985. The Encore hatchback went from 84 days to 129 days during the same period. The four-wheel-drive Eagle soared from 73 days on Dec. 1, to 99 days on Jan. 1.

The company's Renault imports are also piling up. The European-built inventory stood at 195 days on Jan. 1, up from 169 days on Dec. 1.

Alliance/Encore U.S. sales for December totaled 8,609, 35 percent below the same period a year earlier, and off 32 percent from November. Eagle sales were pegged at 1,660 for December, down 39 percent from December, 1983, and off 26 percent from November.

To stimulate sales of it Renault products, the company has been running incentive programs since the beginning of the model year. The company had used interest-rate financing breaks before declining rates nationally convinced the auto maker last month to cut prices instead.

The price of the base two-door Alliance was lowered $166, effective Dec. 26, to $5,995, while all other Alliance models were reduced $111. In five states—California, Hawaii, Alaska, Washington and Oregon—the base Alliance was reduced $394 and other Alliance models were lowered in price by $339.

At the same time, the base two-door Encore hatchback was dropped by $64 to $5,895. The price of other Encore models was also reduced $64.

"They've got to get rid of cars, that's why they are reducing prices at a time when GM is raising prices," said Detroit auto analyst Arvid Jouppi. "They know they've got to make it with Alliance/Encore and they are trying to do it with price. American Motors cannot afford to give up its share of the market."

Philip Fricke, an analyst at Goldman Sachs, in New York, said the glutted AMC pipeline reflects market conditions.

"In general, what it says is that the market continues to be in higher-priced upscale cars," he said. "Where there is demand in the economy cars the competition keeps intensifying. AMC just lacks competitive product."

Jouppi said "there is always the temptation" among auto makers to hike year-end shipments since deliveries to dealers show up as sales on the year-end balance sheet.

"Chrysler used to do it all the time before Lee Iacocca came," he said. "AMC has been pushing the dealers and the AMC dealers are in a position to deal. That is where I have been sending people."

Carl DiSalvo, an AMC-Jeep-Renault dealer in Aspen. Mo., and chairman of the AMC Dealer Advisory Council, said he is concerned with his own large inventory, but expects sales to pick up.

"The (subcompact) market is not what it was a year or two ago," he said. "For Renault, it is just a case of the market slowing up, and I don't think anyone was really prepared for it. But I kind of think people are going to start watching their pocketbooks more. Two thousand dollars is going to be a lot of money one of these days."

Although the AMC/Renault inventory is high, DiSalvo said he is not aware that retailers have been unduly pressured to take cars.

"It has not been brought to my attention that anyone has been forced to take any cars," he said. "I know we aren't."

DiSalvo said he welcomes the company's sales stimulation programs.

"Anything is helpful in a market that is a little tough," he said. "The price-cutting has worked some. I don't think the cuts have been big enough to be real significant, but anything helps."

Car sales show 28 pct. increase as 1985 opens

Continued from Page 2

up 35.42 percent. Ford was up 38.82 percent for the period, Mercury was up 28.13 percent and Lincoln was up 76.81 percent.

At American Motors, AMC was off 49.04 percent and Renault dropped 8.60 percent based on the company's estimated-sales report.

But GM strikes may cut total

Makers schedule 182,782 cars

By Louise Kertesz
Detroit Reporter

With 17 plants working overtime, domestic auto makers continued to schedule production at a high level last week. Output was pegged at 182,782 units, a dip of 1.50 percent from the previous week's 185,560.

But last week's totals do not reflect downtime due to strikes at General Motors plants that build the Buick Electra and Oldsmobile Ninety-Eight (Wentzville, Mo.) and the Chevrolet Corvette (Bowling Green, Ky.).

Last week's build was 12.50 percent higher than the year-ago week's 162,469.

So far this year, 480,024 cars have been assembled, 6.78 percent more than the 449,528 completed last year at this point.

Last week's scheduled output was shared as follows: GM, 58.14 percent; Ford Motor Co., 22.69 percent; Chrysler Corp., 13.84 percent; American Motors, 2.30 percent; American Honda, 1.77 percent; Volkswagen of America, 1.15 percent, and New United Motor Mfg., Inc., 0.11 percent.

Daily overtime was scheduled at all nine Ford plants last week.

GM scheduled two overtime shifts Saturday (Jan. 19) at the following plants: Detroit; Arlington (Tex.); Doraville (Ga.); Framingham (Mass.); Leeds (Mo.); Norwood (O.); Orion Township (Mich.), and Flint (Buick B and G Lines).

California court overturns denial of BMW franchise

SACRAMENTO, Calif.—The California Court of Appeals has turned back a bid by the New Motor Vehicle Board to expand its authority in controlling where new auto dealerships may be located.

The board, which is made up of nine members, four of whom are licensed new-car dealers, has been a source of irritation to auto makers since it was created in 1967 to hear appeals of new-car-dealer licensing decisons made by the Department of Motor Vehicles.

In 1977, the board was held to be a "slanted adjudicatory tribunal" incapable of offering manufacturers procedural due process in a case involving American Motors and one of its dealers

And in spite of 1979 legislative action strictly outlining its functions, the board was again held to be a biased tribunal in a 1983 case involving Chevrolet and one of its dealers.

The issue came up again when Hal Watkins, Hal Watkins BMW, Camarillo, Calif., sought to keep BMW from locating another dealer near him on the grounds that even though the new dealer would be 15.2 miles from Watkins' facility instead of inside the appealable distance of 10 miles, such an appointment would constitute a modification of Watkins' franchise.

The New Vehicle Board agreed with him, but on appeal by BMW, the Court of Appeals has now ruled that, notwithstanding BMW's arguments that the composition of the board is unconstitutional, it lacks jurisdiction over the Watkins protest.

The court found that the board's interpretation of the relevant statutory provisions is unconstitionally impermissible and that the board had no business deciding the matter to begin with.

The court said that Watkins' contract with BMW expressly states that he is not an exclusive dealer and that BMW reserves the right to appoint other dealers whether in Watkins' geographic area or not.

The Appeals Court said that if it agreed with the board, BMW could never create a new dealership without establishing good case before the board and the result would be that existing BMW dealers would be accorded a perpetual territorial monopoly.

China explores deal to build Land Rover

LONDON.—China is dickering with BL over the possibility of setting up a joint-production Land Rover plant, according to a report published here.

Apparently, no decision has been reached on production goals, size of investment or whether the Chinese plant would assemble kits or manufacture the vehicles. Land Rover now manufactures vehicles in 20 plants around the world.

Truck production slips but stays above 63,000

U.S. truck makers targeted production of 63,728 units last week, slipping 2.92 percent from the previous week's 65,647 but 6.02 percent better than the year-ago week's 60,106.

This year's build of 166,464 trucks is keeping pace (down 0.58 percent) with last year's 167,444 units completed at this point.

Ford Motor Co. scheduled daily overtime at all eight of its plants last week.

General Motors scheduled Saturday (Jan. 19) overtime at its No. 1 plant in Flint.

Canadian output of cars slips; trucks climb

Canadian auto makers scheduled production of 20,446 units last week, 11.37 percent below the previous week's 23,068, which was the best output in eight weeks.

Last week's build was 13.85 percent below the year-ago week's 23,732.

So far this year, 54,955 cars have been assembled, 6.99 percent behind last year's 59,084 completed at this point.

Truck makers pegged last week's assembly at 18,704 units, holding steady (up 0.68 percent) with the previous week's 18,578 but up 17.85 percent over the year-ago week's 15,871.

Chrysler's Windsor plant completed 2,580 Plymouth Voyagers, 2,742 Dodge Caravans and 594 Mini Ram Vans last week, bringing the T-115 total so far this year to 15,980.

Bankruptcy court to consider bid for Terex Corp.

CLEVELAND.—A plan to reorganize Terex Corp. that would see First of Boston Corp. become a major owner is being prepared for U.S. Bankruptcy Judge Harold F. White.

Calling the proposal "good news," Raymond T. White, chief operating officer of Terex which filed for Chapter 11 protection, added that the reorganization plan could see the company being taken over by a group of investors under the aegis of First of Boston Corp.

Pending determination of the proposals, the reorganization could mean the removal of General Motors as a key unit in the control of Terex. Terex, maker of earthmoving equipment, has plants in Hudson and Brooklyn, both suburbs of Cleveland.

GMs' future in Terex was described as a "passive investor role." Plans for Terex's future were disclosed to a committee representing creditors before being turned over to Judge White. Creditors in attendance indicated approval, said Warner, except the UAW, which abstained.

Warner said Terex completed the past year meeting all its obligations and moved into 1985 on a strong note with bids being considered by several major companies and by the Defense Department. Employment in the two Terex plants is around 850.

Dealers see fight for life in new retailing climate

By Robert M. Lienert
Editor

SAN FRANCISCO.—With the opening here of NADA's 68th Convention and Exposition, the nation's dealers are enjoying a second consecutive meeting bathed in success and optimism.

Last year in Dallas marked a turnaround convention, with the industry hot on a comeback trail. These two conventions stand in marked contrast to the years immediately prior to Dallas, when the convention mood was somber.

Here in San Francisco—a convention city of charm appropriate to the upbeat mood—the 1985 convention is under way with a sense of determination. Despite the rosy overtones, some dealers here believe that the easy-ridin' days are slipping away. They believe that the months ahead will bring tougher competition, leaner margins and a fierce fight for survival.

Discussions of General Motors' new corporation/division, Saturn, fill talk in the corridors and receptions. Chevrolet dealers tend to view it as an appropriation of their "right" to GM's newly announced market-entry auto. Other dealers see in Saturn the first indication of an all-new way to retail automobiles and they wonder if Saturn means the end of auto retailing as they have known it.

Registrations thus far indicate that attendance this year may top last year's 17,000 by a small amount. This total falls a bit short of the near-record 19,000 counted for 1979 in Las Vegas, but heavy "walk-in" business could boost attendance to a record 19,000. Some 3,600 dealers are included in this year's total—about the same as last year.

This is the first time for NADA in San Francisco since 1978—when the industry was still in its high-volume period. Attendance that year was not quite 15,000.

In his welcoming address, James P. Jennings, who will be succeeded as president later in the convention by William J. Symes, mentioned a number of programs for NADA to work on in the coming year.

Jennings is a Chevrolet dealer in Glenview, Ill., and Symes is a Cadillac dealer in Pasadena, Calif.

Jennings, in opening the convention, said he expected 1985 to

Rebodied GLC

Mazda softens the lines

Mazda has softened the lines of its GLC and has made a number of subtle changes beneath the skin. The new hood slopes appreciably and, to make the windows look deeper than they are, the tops of the doors are beveled to meet the windows. As before, there are three-door and five-door hatchbacks and a four-door sedan. Story, other picture, on Page 257.

breaking news

Avanti and bank settle differences

SOUTH BEND.—Avanti Motor Corp. reported last Friday it had resolved differences with First Source Bank of South Bend that resulted in legal action taken against Avanti the day before. Avanti said it is current on its payments to the bank, production is continuing and the company remains in control of all its property. Police had served a court order to seize all Avanti properties for the bank.

GM converting Olds plant to build new car

LANSING.—General Motors' Buick-Oldsmobile-Cadillac Group said it will spend $105 million to convert an Oldsmobile rear-axle plant here for assembly of a new front-drive passenger car. The factory had been scheduled to be closed this year because of declining demand for rear-wheel-drive

Boeckmann is named Quality Dealer of Year

SAN FRANCISCO.—H.F. (Bert) Boeckmann II, owner and president of Galpin Motors, Inc. (Ford), Sepulveda, Calif., has been named 1985 Time Magazine Quality Dealer of the Year.

He will serve as official national spokesman during the year for all 63 recipients of the TMQDA Award.

Boeckmann's award was announced by Michael M. Carey, director of the TMQDA program for Time at the opening session of the NADA convention here.

Boeckmann was picked from among a group of 21 finalists in the 1985 TMQDA program.

Boeckmann began his automotive career in 1952 as a salesman for Glendale Nash.The following year he joined Galpin Motors as a salesman and later became vice president. In 1964 he acquired a majority stock interest in the company and was named president.

Boeckmann was nominated for the TMQDA award by the Motor Car Dealers Assn. of Southern California, of which he is a director. He is a member of NADA, a founding director of the Ford Dealers Assn., past president of the Ford Dealers Advertising Assn. and was national chairman of the 1979 Ford Dealer Council.

Hanon ousted by Renault; Besse named

Richard Feast
European Editor

PARIS.—Bernard Hanon's position as head of the state-owned Renault Group has been increasingly uncomfortable for several months, but the brutal and abrupt manner in which he was fired last week left observers aghast.

Georges Besse, 57, chairman of another nationalized concern, the aluminum group Pechiney, became a Renault director on Monday and was elected president-director general at Tuesday's board meeting.

As the French Cabinet met for its regular Wednesday session to verify the change, Hanon, 53, was clearing his desk on the eighth floor of the Renault headquarters overlooking the river Seine at Boulogne-Billancourt.

Only the previous Friday, Hanon had attended a board meeting in New York of American Motors in which Renault has a 46 percent interest. Even then, his position was being undermined in Paris.

Hanon was said to be looking ill at ease at the meeting.

Very early on Saturday morning (Jan. 19), he was telephoned at the Hotel Carlyle by a Renault colleague who read to him the lead story in that day's edition of the French newspaper Le Matin. The paper had been leaked news of Hanon's departure and the appointment of Besse.

Hanon flew back to Paris on Saturday night and spent last

GM eyes huge rise in defense business

By Marjorie Sorge
and Michelle Krebs
Of the Automotive News Staff

General Motors will double or triple its $800-million-a-year defense and space business within the next two or three years, according to Donald J. Atwood, a GM executive vice president.

He also indicated that GM is contemplating future mergers, equity agreements or joint ventures with defense contractors which would create more military business. But, he said, GM is not formally looking into those possiblities now and will move "very carefully."

At present, about 1.5 percent of GM's business is in the military field, and it has never gone above 3 percent. In fiscal 1983, GM had $827 million in defense and space sales.

GM Chairman Roger B. Smith has said about 20 percent of GM's business could be non-automotive by the year 2000, and he plans to increase its military business substantially.

GM, in fact, established a Military Vehicles Operation last summer to look for more business.

"Depending on the military activities of this country and assuming it grows to certain levels and stays there, we think GM can and will be a significant factor in that business," said Atwood, who is executive vice president, truck and bus, power products and defense and components operations.

GM's strengths in the military business include vehicles, gas turbine and diesel engines, transmissions, electronics, navigation and guidance systems, fire control systems and computers.

But, he said, GM's future business could include research and development for the Reagan Administration's "Star Wars" military programs.

"The thing about the potential 'Star Wars' program is that GM

Saturn fuels rumor mill; would you buy 'Nrutas?'

By Dan McCosh
Detroit Reporter

"Somebody came up with the idea that we start our own small-car company and call it 'Nrutas'—that's 'Saturn' spelled backwards," joked Chrysler Corp. President Harold K. Sperlich, while denying that Chrysler is following General Motors' recent splashy lead in incorporating a small-car business as a separate corporation.

Sperlich is among those busy fielding the spate of rumors spawned by GM Chairman Roger B. Smith's tearing up his firm's corporate organization manual and initiating a series of acquisitions capped by the announcement it was setting up Saturn Corp.—a subsidiary expected to become a pilot for reorganizing GM's entrenched business practices and manufacturing plants.

Notwithstanding the genuine impact of GM's moves, Detroit's always-sensitive and rumormongering infrastructure has created scenarios for GM and the rest of the auto industry far beyond Chairman Smith's wildest dreams.

Many, like the rumor Chrysler was about to follow suit with a Saturn Corp. of its own, have at least a grain of substance, since Chrysler is, in fact, struggling to develop a business plan for low-cost car production competitive with Saturn—although, according to Sperlich, it isn't going to go as far as a separate entity.

Yet other rumors spawned by GM's fervor for new acquisitions have generated significant morale problems—for example one persists that GM is on the verge

Transport Board examines issues

CAFE pot simmers with bevy of stances

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—Some segments of the auto industry are looking at whether fuel economy standards (CAFE) should be adjusted downwards or repealed.

Since both General Motors and Ford Motor Co. are having trouble meeting the 1985 fuel economy standard of 27.5 MPG, it seems reasonable to expect that GM—and possibly Ford—may ask NHTSA to drop the 1986 CAFE to 26.0 MPG administratively. Or failing that, they may ask Congress to lower or abandon CAFE standards legislatively.

If that occurs, GM is likely to be joined by other companies expecting trouble with future CAFEs. This includes Ford and the whole kit and kaboodle of European auto makers, some of whom are already paying hefty gas-guzzler taxes and who may be soon facing civil penalties as well.

The timing of any such petition is crucial because of the need to calculate CAFE projections. NHTSA has said it cannot make any changes after the start the model year.

Chrysler Corp.is adamantly opposed to any lowering of the passenger CAFEs and is expected to do more than just the vigorous talking and letter writing it did when Ford succeeded in getting the light-truck fuel economy standards relaxed for the 1985 model year.

Chrysler will probably be joined by the Center for Auto Safety and other consumer and environmental groups.

A preview of these divisions and tangle of issues occurred at the 64th annual meeting of the Transportation Research Board, where a day-long session featured views of various groups—some outside, some government and some quasi-government.

The topic was "Automobile Fuel Economy Standards—Unnecessary Intervention Or Effective Conservation Policy." No consensus was reached.

Gordon E. Allardyce, Chrysler's manager for regulatory analysis and planning, strongly supported CAFE and said the company's experience shows it is possible to comply.

Allardyce said it was not easy for Chrysler "to change almost our entire product line in the midst of a major recession, but we did it—at great expense and sacrifice." Further, its product plans assumed that the set CAFEs would be maintained and perhaps even raised.

Chrysler said that NHTSA's reduction of standards is a classic case of changing the rules in the middle of the game.

Not to make GM and Ford produce more-efficient models so they have carryback credits and not to impose civil penalties, Allardyce continued, "ironically penalizes those auto companies which have already paid the price."

Earlier in the day, others supported some of Chrysler's statements without necessarily endorsing its policy. David L. Greene, of Oak Ridge National Laboratory, analyzed the relative effect on gas mileage of design and engineering changes and changes in consumer buying habits.

From 1978-1984, Greene found the biggest factor to be improvement in nameplates and then the introduction of

Arrested for copies

William Favre, as he appeared in the Oct. 29 issue of Automotive News, was arrested last week by Swiss police in Geneva during a news conference he had called to introduce the first of what he said were exact ($135,000) replicas of 1957 and 1962 Ferraris. Favre, based in Geneva, was charged with infringing on Ferrari's name and reputation. The arrest was prompted by a complaint from Fiat's legal department.

His attorney tells Detroit federal judges

DeLorean indictment is expected

By Edward Lapham
Senior Editor
Copyright, 1985, Automotive News

The U.S. attorney in Detroit will recommend that a federal grand jury indict former auto maker John Z. DeLorean on new federal criminal charges, according to one of DeLorean's attorneys.

The outcome has long been speculated, but this is the first written confirmation of the pending indictment.

"The United States attorney has indicated, in writing, that they intend to request the grand jury to indict Mr. DeLorean, barring some change in circumstance," Donald M. Re told two Detroit federal judges in a letter.

Re and his partner, Howard Weitzman, represented DeLorean in his lengthy federal drug-trafficking trial, winning acquittal on all charges last August.

Leonard Gilman, U.S. attorney in Detroit, declined to comment on the matter. "If I were to say anything, it might violate Rule 6(e)," he said.

Rule 6(e) is the Federal Criminal Procedures provision which guarantees grand jury secrecy.

Gilman has steadfastly refused to even acknowledge the existence of a federal grand jury investigating alleged financial irregularities involving the defunct DeLorean Motor Co.

However, Assistant U.S. Attorney James Walsh, who unsuccessfully prosecuted DeLorean on the drug charges in Los Angeles, revealed the grand jury investigation in bankruptcy court here more than 18 months ago. The beginnings of the federal probe were first reported in Automotive News in November, 1982.

The feds are known to have investigated a number of possible crimes including tax fraud and bankruptcy fraud.

Sources close to the investigation last week said the probe apparently is finally winding down. The federal investigators have scheduled interviews in New York this week, but most observers believe they are merely "filling in a few small gaps."

• After those gaps are filled and the "evidence" is ready for the grand jury, the feds might give DeLorean himself the opportunity to tell his side of the story in order to dissuade them from seeking an indictment. A conclusion of the grand jury's investigation could come as early as February.

Whether DeLorean's attorneys would permit him to talk to the feds is another matter.

Re's letter was written to U.S. District Judge Thomas P. Thornton, who is overseeing the grand jury, and Bankruptcy Judge Ray Reynolds Graves, who is handling the DMC bankruptcy, where Chapter 7 liquidation proceedings are taking place.

It was a cover letter for the submission of microfilm of certain documents originally seized in a court-ordered search of DeLorean's Bedminster (N.J.) home by creditors committee attorneys in September, 1983.

The grand jury subpenaed many of the documents Sept. 10, 1984, but DeLorean's attorneys tried unsuccessfully to quash the subpena, and Judge Thornton ordered the documents surrendered to the grand jury.

Last Oct. 22, Judge Graves ordered DeLorean to produce the documents for examination by DMC's trustees. On Jan. 21, Judge Graves delayed a further hearing on the matter until Feb. 19.

If auto restraints are lifted

Brock sees no Japanese flood

By Jake Kelderman
Washington Reporter

WASHINGTON.—When it comes to the subject of import restraints on Japanese cars, Washington is hardly a quiet place these days.

The restraints, now in their fourth year, expire March 31.

Most recently, U.S Trade Representative William Brock confirmed published reports indicating that in the event of an end to the import quotas that now limit Japanese cars here to 1.85 million units annually, the U.S. would not see a sudden surge of vehicles from that country.

Several high-ranking Japanese Government officials had been quoted by the Washington Post as having told the Reagan Administration that Japanese manufacturing capacity constraints would preclude such an occurence.

The paper quoted the Japanese officials as suggesting that perhaps no more than another 650,000 cars would be brought to the U.S. in the absence of the quotas.

Brock, who is known to question the value of the restraints, said he didn't think it would be possible for an "overwhelming" surge because that would require penetration by the Japanese into the middle-size-car arena where he thinks they are not yet competitive.

However, the UAW maintains that the Japanese have the ability to produce an additional two million or more vehicles annually.

In a letter to Susumu Nikaido, vice chairman of Japan's Liberal

May drop turbo unit for Continental, Mark VII

Ford giving up on luxury diesel

By Richard Johnson
Detroit Reporter

Less than a year after their introduction, Ford Motor Co. appears to have given up on selling turbodiesel-equipped versions of its Continental and Mark VII models.

Robert Rewey, Lincoln-Mercury general manager, said the near-invisible rate of installations for its 2.4-liter, BMW-built six-cylinder turbodiesel probably means the company will stop offering the engine to buyers.

But he said Ford will continue to offer a 2.0-liter four-cylinder Mazda-built diesel as an option in the Ford Escort and Tempo and Mercury Lynx and Topaz.

"I think you will probably see them stay in the small cars, but not the large ones," said Rewey, who takes over as Ford Division general manager Feb. 1.

No final decision has been made on whether to eliminate the turbodiesel option for the 1986 model year, he said. But, he added, "the market is dictating that they are almost out, the rate is so low."

Ford entered the diesel wars shortly after the 1984 model year began, starting with the Mazda diesel on Escort, Tempo, Topaz and Lynx and then adding the turbodiesel option on the luxury models in early 1985. But the company began scaling back its order for turbodiesels as the diesel boom began going bust two years ago.

The original deal with BMW called for Ford to buy 190,000 engines over three years. But in 1983, Ford cut the order to 71,000 engines during the same period.

Diesels became extremely popular options in the U.S. following the Iran hostage crisis in 1979-80. Just five years ago, auto executives surveyed by the University of Michigan's Office for the Study of Automotive Transportation predicted that 25 percent of the U.S. passenger-car market would be held by diesels in 1990.

• But by the time Ford had its diesel program in place, installations had dropped precipitously. Gasoline prices had stabilized and diesels suffered from a rash of negative publicity.

Alleged problems with a V-8 diesel built by Oldsmobile and installed in Olds, Cadillac, Chevrolet, Pontiac and Buick models from 1978 through 1981 led to a rash of consumer complaints and soiled the image of diesel engines in general.

Late last year, General Motors announced it will no longer offer its 4.3-liter V-6 and 5.7-liter V-8 diesel engines in passenger cars beginning with the 1986 model year. GM will continue to offer diesels in Chevrolet and GMC light trucks, and an Isuzu diesel will continue to be available in the Chevrolet Chevette.

Rewey, who criticized other makers for "too quick an application without doing their homework," recalled that Ford officials were once chastised for not jumping into the diesel market more quickly.

"I remember the principals at Ford Motor Co. were just taking a beating in the press over why they didn't do what Brand X was doing," he said. "Well, thank God they didn't."

Because public perception of diesels is so bad, Rewey said it is nearly impossible to convince buyers that not all oilburners suffer from the maladies of GM's gasoline-derived V-8s.

Rewey praised the quality of the BMW engine imported for Continental and Mark VII, but he said diesel sales nonetheless remain dead in the water.

For the 1984 model year, diesels accounted for 7.1 percent of all Mark VII engines, or 2,367, and 4.5 percent on the Continental, or 1,371 engines.

The rate of diesel installations was even lower on Ford's subcompacts during the 1984 model year. Diesel orders were pegged at 2.1 percent on Tempo and 2 percent on Topaz for the year. Installations were 5.3 percent on Escort and 7 percent for Lynx in 1984.

A slight case of frostbite

Mid-month car sales fall below 1984 total

By Jenny L. King
Detroit Reporter

As the coldest weeks of the winter season settled over the U.S., new-car sales suffered a bit of frostbite. They failed to match the year-earlier total for the mid-January period.

Mid-January domestic sales reached 168,668, down 7.46 percent from the 182,273 reported a year ago. The high for the period was 254,688, recorded 20 years ago, in 1965.

On a daily-rate basis, however, sales topped the 1984 figure by 4.10 percent. The eight selling days this year produced an average of 21,084, compared with an average of 20,253 for nine days in the 1984 period.

Chrysler Corp. and Honda reported sales increases and General Motors sales were up on a daily-rate basis.

GM dealers delivered 99,016 new cars, down 5.29 percent from 104,545 last year, but up 6.55 on a daily-rate basis. Chrysler was up 0.60 percent, to 21,702 from 21,573 (up 13.18 percent daily rate). Honda sales of 2,500 were up 3.31 percent from 2,420 (up 16.36 percent daily rate).

Ford Motor Co. dropped 13.28 percent, to 41,012 from 47,294 (down 2.44 percent daily rate). American Motors reported estimated sales of 3,125 new cars, down 25.60 percent from 4,200 a year earlier (down 16.27 percent daily rate), and Volkswagen was down 41.41 percent, to 1,313 from 2,241 (down 34.14 percent daily rate).

GM's share of the domestic market increased to 58.70 percent from 57.36 percent. Chrysler gained a percentage point, rising to 12.87 percent from 11.83 percent. Ford dipped to 24.32 percent from 25.95 percent. AMC's 1.85 percent was off from 2.30 percent. Honda claimed 1.48 percent, up from 1.33 percent, and VW took the remaining 0.78 percent, down from 1.23 percent.

On a year-to-year basis, only six domestic makes enjoyed sales increases in mid-January. Plymouth was up 1.73 percent, Dodge was up 3.48 percent, Lincoln was up 0.38 percent, Buick was up 1.37 percent, Chevrolet was up 8.13 percent and Honda was up 3.31 percent.

Makes slipping in sales were: Chrysler, down 3.84 percent; Ford, down 14.53 percent; Mercury, down 13.82 percent; Cadillac, down 6.72 percent; Oldsmobile, down 19.17 percent; Pontiac, down 18.87 percent; AMC, down 64.29 percent; Renault, down 15.92 percent, and VW, down 41.41 percent.

Year-to-date sales were up 8.49 percent, to 359,537 from 331,409.

DOMESTIC SALES

	Jan. 11 20, 1985	Jan. 11 20, 1984

Estimate

Hudson River hides auto burial ground

EDGEWATER, N. J.—In what began as a search for a stolen car here, police have uncovered an automobile burial ground in the Hudson River and said they expect to find as many as 40 vehicles in the water.

Police Chief Edward Schmalz said a team of four divers will continue working at the abandoned site of a ship-loading company until the cars are removed. He said the task would take several months. The divers, he said, are hampered by an inability to see the cars in the dark, polluted water.

Import registrations increase in Japan

TOKYO.—Registrations of imported cars totaled 3,045 in Japan in November, compared with 2,312 in the year-earlier month.

Leading makes' totals were: BMW, 812; Mercedes-Benz, 667; Volkswagen, 485; Audi, 345; Mini, 129; Fiat, 68; Autobianchi, 55; Volvo, 48; Ford, 40; Citroen, 38; Porsche, 36; Cadillac, 34; Buick, 32; Jaguar, 31; Saab, 30; Renault, 25; Chevrolet, 24, and Pontiac, 24.

May 5 is new date for Ford Aerostar

ST. LOUIS.—Ford Motor Co. announced that it will temporarily close the suburban Hazelwood assembly plant Jan. 25 to accelerate retooling that will prepare for the launch of the 1986 Aerostar on May 5.

The company has set first-year production at 100,000, but in calendar 1986 and thereafter about 200,000 minivans will roll off the line, the market willing.

No announcements have been made yet as to the relocation of the Ford Crown Victoria and Mercury Grand Marquis, the big cars which have been much in demand in wake of falling petroleum prices and a stable economy.

Ford is spending more than $750 million for the minivan that will take on the entrenched Chrysler Corp. and Toyota models and the new General Motors version. For one thing, the high tech of the North St. Louis County plant will be expanded. Presently, there were but a few robots but the new line will include 100 such automatic machines for the rear-wheel-drive Aerostar.

Many of the 2,300 hourly workers will be furloughed until the plant is ready for production. In the interim, some laid-off workers will be retrained and others will receive some benefits. Like Chrysler's Fenton plant here, and the GM facility in nearby Wentzville, the Ford assembly operation will be transformed into a showcase.

A Ford official said that all workers will be recalled by late summer.

Located on a 96-acre site, the 1,370,000-square-foot assembly plant is undergoing extensive changes, including expansion of approximately 425,000 square feet for the Aerostar. An additional six acres were purchased to accommodate the modernization.

The Aerostar is an all-new minivan with 97.3 percent automation welding incorporated in its assembly. The plant will become the most extensive automated body construction facility, including 313 automation fixtures and 100 robots complemented by an automated state-of-the art base coat/clear coat paint system.

Originally scheduled to begin in December, 1984, the Aerostar was delayed by installation of the high-tech robotic equipment.

Job 1 is expected to be about May 6 and the base-level Aerostar will be powered by a 2.3-liter engine and have 175.9 cubic feet of cargo space and payload capacity of 2,000 pounds. Seating will be available for seven persons or rearrangement of cargo.

College slates program on quality assurance

AUBURN HILLS, Mich.—Oakland Community College has slated a Quality Assurance Symposium for manufacturers and automotive suppliers on Friday, Feb. 8, from 9 a.m. to 3 p.m. at the Auburn Hills Campus.

The symposium is designed to provide local suppliers with information on current and future quality requirements for retention of vendor certification. The $35 registration fee includes lunch.

Introducing the Best Thing to Come Along in 50 Years for Pickup Trucks!

VERSA-RAMP

Versa-Ramp, a brand new, patented, revolutionary product is designed for simple installation on the tailgate of any make or model pickup truck. Its total weight is only 100 lbs. and its 100% steel construction provides a loading capacity of up to 700 lbs. It expands to a full 6½ feet and is 4 feet wide. So, almost anything that will fit in the bed of a pickup can be driven, ridden, pushed, or pulled up the ramp into the bed. No more lifting! Installation does not mar the exterior of the tailgate and ramp is easily removed from the tailgate for storage.

If you're in San Francisco for the NADA Convention don't leave until you've seen the exciting new Versa-Ramp demonstrated. We're not in the exhibition hall, we're at the Marriott Fisherman's Wharf, 1250 Columbus Avenue, San Francisco, Suite 302. Just call us at (415) 775-7555 Ext. 131 (or 106) before you come to set the time.

If you're not in San Francisco and would like to arrange for a demonstration at your dealership or would like to receive a complete product information kit, call us toll free at 1-800-438-6934.

As Mr. Sinatra said, it was a very good year

Cleveland dealers are flying high

By Sanford Markey
Staff Correspondent

CLEVELAND.—Popularized by Frank Sinatra into a hit song, the line "it was a very good year" became the 1984 theme for car dealers who look ahead for the next 12 months with great expectations.

James Garfield, executive vice president of the Cleveland Automobile Dealers Assn., helped sum up the year with his annual review statement that it "was the best year since 1979."

For some, the bullish year has meant building expansion, as reported by dealers Al Spitzer and Lee Seidman.

Spitzer is executive vice president of Spitzer Management which operates 22 franchises in Florida and Ohio covering 17 locations principally in the Buckeye State. Expansion is underway at the family's automotive complex at Grafton, site of the original hardware store in 1904. Spitzer is also adding Volkswagen to its lines.

"If the economic forecasts by the experts hold true," said Spitzer, then "we expect 1985 to be very strong with perhaps a sales increase of 10 percent over last year. The past 12 months, with December closing with especially heavy turnover, brought a 30 percent increase over 1983."

There was no particularly cold car last year, he added. Availability was the only question. The year showed people want more options and "they like gingerbread. Customers also are now looking at domestics while shopping, whereas a few years ago many customers wouldn't even consider looking at anything but imports.

The strong market, he added, also indicates that people "are keeping their cars longer and want quality."

Quality and expansions are two significant words for Seidman, who last November opened his new $1.9 million dealership for his line of imports, Toyota, Volvo, Porsche, Audi and Honda.

The recipient of a 1984 National Quality Award from Honda, Seidman has been involved with import sales for more than 25 years in the Cleveland market.

He said "1984 was the best year since 1973," and that if the manufacturers "maintain the same quality standards and don't try to force the market, we'll keep the pace." He hopes, too, that domestic manufacturers will continute to improve and to match the imports.

While the overall atmosphere is a healthy one, there are some clouds on the horizon.

Jack Dobbs, CADA board member and Crestmont Cadillac Corp. executive, did note price resistance and wondered if this will increase in light of General Motors' new hike.

"In our recent forecast meeting, our people said 1985 should be 20 percent over the past 12 months, and those months were above 1983," he said."While December was a good month, comparatively speaking, we felt price resistance to Cimarron.

"We had good acceptance to DeVille/Fleetwood, and a generally strong trend to the smaller models." One highly successful promotion was giving a mink coat with the sale of any Cadillac.

Overall, his dealership's sales were up 11 percent and profits were 60 percent ahead of 1983. A strong factor was service strength, up 40 percent.

Besides its east side Cadillac dealership, Crestmont operates a Toyota outlet on the west side. Despite a short supply, Dobbs said the capability to handle inventory to meet customer demand reflected a 20 percent hike in volume. He anticipates that his Audi line will benefit, too, with the car's new sales setup.

Service development, with its increases in volume and profit, is being keenly watched in many other dealerships by management well aware of the high-tech input.

Sam Marshall, whose 52 years as a dealer make him dean in the area, emphasized that service is a key to the achievements of his Ford dealership. A training program for mechanics is a critical element in keeping abreast of changes.

The past year was 30 percent higher than "an excellent 1983," he said, and although "we received all the models we needed, we're looking forward to Ford's rounding out its program of one sports model for each line. We did experience some shortages in Mustangs, Escorts and Tempos."

What impressed Marshall, a former CADA president, during the past months was the return of "confidence, faith and people willing to extend themselves." He also noted the buying public's recognition that American-manufactured vehicles are now "quality cars."

Leasing has become another strong sales point and Marshall said Ford's Red Carpet rate is helping to promote more leasing than ever.

At Steve Barry Ford, Bruce Barry, general manger, called Crown Victoria a "hot mover" along with Escort and Tempo. With the easing of interest rates, he pointed to a pickup in pickups, particularly by the smaller company owner who feels he can now make his purchase.

Leasing, though, is a point of contention for Larry Axelrod, a past CADA president and head of the Pontiac dealership bearing his name.

"Not only are we short of cars," he said, "but fleet companies are getting the break when it comes to getting cars."

Overall, the past 12 months were described as a "fine year" with Grand Am and Fiero "hot cars." He looks forward to another good year because "people still must catch up with the past years of not having made their purchases."

He estimated that new-car sales for the past 12 months weres up 25 percent with profits double that figure.

At Crossroads Lincoln-Mercury, Inc., Harry Lum hoped this year would find him in the same predicament as the past 12 months when "I did not know which model to promote in my ads since every one was a 'hot car.' Lincoln-Mercury is becoming stronger in the overall market, and this will help the individual dealer."

Lum, who opened in 1973, described Ford's pricing structure as the best in history from a dealer's standpoint. He said this is seen in sales, with retail turnover up 35 percent and fleet up 400 percent, the latter reflecting the growth of business development in the suburban area where the dealership is located.

The Lincoln-Mercury-Ford growth was reflected in year-end figures showing the 12 Ford and L-M dealerships in Cleveland's metropolitan district sold a combined total of 28,711 new cars and trucks—up 15 percent over 1983.

Rising gas prices in Mexico hurt used-car dealers

MEXICO CITY.—A reported new increase in gasoline prices in Mexico, rumored to be 50 percent above current levels, is to be announced this month.

Spokesmen at used-car lots throughout Mexico City, which had trouble moving 8-cylinder models last year, agreed that this will affect sales of large cars.

Even tumbling prices do not seem to build buyer interest in the heavy cars.

On the other hand, two-year-old Datsuns and Volkswagens move quickly and command prices of up to $5,000. The interest in Renaults is also growing.

There are several problems even in sales of lighter new and used cars: Rising gasoline prices, increased tolls for speedways, higher maintenance costs and a shortage of good mechanics to keep cars rolling.

E&G.
Because you deserve a handsome profit.

Every business needs an edge to compete. E & G goes beyond giving dealers like you an edge. We give you the "Dealer's Advantage" with classic extras that your customers demand—extras that give you a handsome profit too! Thanks to E & G you can give your customers elegant features like classic grilles and deck straps, classic spares, simulated convertible tops, and much more. Your customers will appreciate the quality so much they'll come back to you again and again. That's the E & G "Dealer's Advantage" and it's yours for the asking. Call us today for profit's sake!

A comprehensive definition of the breed

What is an auto dealer?

Editor's note: from the North Dakota Automobile Dealers Assn. Newsletter.

Between the innocence of the teens and the dignity of maturity, we all fall under the influence of a group of people called auto dealers.

Auto dealers come in assorted sizes, weights and colors. They have various interests, hobbies, religions and beliefs, but they share one creed—to sell more cars at a higher profit than any other dealer in the universe.

The auto dealer is a composite. He must have the energy of a harnessed volcano, the efficiency of an adding machine, the memory of an elephant, the understanding of a psychiatrist, the wisdom of Solomon, the tenacity of a spider, the patience of a turtle trying to cross a highway in rush-hour traffic, the decisiveness of a general, the diplomacy of an ambassador and the financial acumen of a Wall Street wizard.

An auto dealer may be handsome, or possess sports skill, but mostly he must have respect for people, individually and en masse.

He must respect the customer who drives in with a clunker to trade and says, "There's not a thing wrong with it."

He must respect the customer who test drove a car for a week, signed papers, bought it and drove it for another week, then changed his mind and wanted his money back.

He must respect the inconsiderate, the bothersome, the noisy and the sly.

An auto dealer must possess many abilities. He must not mind explaining for the tenth time to the new salesperson that there is a county tax and a sales tax.

He must not mind explaining to the customer that insurance is not optional but a necessity.

An auto dealer must sense what decisions he must make and which must be made by his employes.

He must be steadfast without being inflexible, sympathetic without being maudlin, generous without being taken.

He must work with the moods of salespeople and enjoy their joys, satisfactions and successes while understanding their griefs, irritations, embarrassments and harassments—and their down days.

An auto dealer must constantly take stock of his business status and spend increasing time in the community as a leader.

He must do all of the above while worrying about this month's low new-car sales, what his wife will say if he works or stays late again tonight, whether he forgot another anniversary, whether his son really wants to become a hairdresser and how Sam Jones, the loyal older but less active salesman, will take the lower commission figure on his paycheck.

And while worrying about where to get the money to help support the Boys Club, find how to expand the service department without cutting into the showroom area and who's been stealing the spare parts from the company supply room.

The most amazing thing about auto dealers is that they would not trade jobs with anyone they know.

They like what they do.

Holbrook named to Volvo Hall of Fame

SCARBOROUGH, Me.—Joseph Holbrook, of Portland Volvo here, has been named to the Volvo Hall of Fame.

Volvo salespersons qualify for the honor by selling 1,000 new Volvos. Holbrook has been with the dealership since 1970.

Major events show attendance increase for 1984

Auto racing packs the tracks

AKRON.—America's renewed enthusiasm for autos in 1984 was reflected not only in crowded new-car showrooms but in jam-packed grandstands at major auto racing tracks.

Attendance figures compiled by Goodyear for major North American auto races in 1984 show that there were nearly a quarter-million more spectators than in the previous year. Attendance totaled 4,983,000 for 223 race dates compared with 4,741,000 for 219 events in 1983.

"The increasing spectator interest in auto racing parallels increasing sales of automobiles in general and high-performance automobiles in particular," said Leo Mehl, Goodyear's director of racing.

"It is significant that you cannot attend a major auto race today without seeing auto engineers from Detroit and around the world learning from and contributing to race-car technology," said Mehl.

Goodyear, which claims to be the largest producer of race tires, annually publishes comparative auto-racing attendance figures from selected series as a barometer of the sport's popularity.

Attendance increased in 10 of 13 major North American auto-racing series monitored by Goodyear. The only decreases came in three series which ran fewer events in 1984 than the previous year.

The National Assn. for Stock Car Auto Racing (NASCAR) Winston Cup Grand National series remained the world attendance leader with 1,574,000 spectators at 30 events, up 27,000 from 1,547,000 at the same number of events in 1983.

An increase in average number of spectators per event to 52,467 from 51,567 resulted from seats being added at several major tracks previously filled to capacity on race days.

The Championship Auto Racing Teams (CART) PPG Indy Car World Series added three new events in 1984 and maintained its position as the leader in average race attendance among North American series with 60,750 per event.

Combined with the U.S. Auto Club (USAC)-sanctioned Indianapolis 500, the world's best-attended single-day sporting event, Indy Car racing attendance jumped 118,000 to 972,000 at 16 events in 1984 from 854,000 at 13 races in 1983.

The international Formula One Grand Prix series, listed separately from North American series on the Goodyear attendance chart, has the highest average race attendance in the world and is second only to NASCAR's Grand National series in total attendance.

Formula One crowds increased by 30,000 in 1984 to 1,325,000 at 16 races from 1,295,000 at 15 events the previous year. The series, which included three North American races in 1984, averaged 82,813 spectators at each of the 16 events.

The largest attendance increase of any auto racing series came in the Sports Car Club of America (SCCA) Budweiser Trans-Am Championship, where increased activity by American auto makers helped add four races and 126,000 spectators in 1984.

The Trans-Am drew 375,000 at 16 events compared with 249,000 at 12 1983 races.

The CRC Chemicals Can-Am series was expanded to 10 races in 1984 from six the previous year, and attendance grew 75,000.

The Robert Bosch Super Vee series, which ran before large crowds as a supporting event at Formula One, Indy Car and Trans-Am races, played before 392,000 fans at 12 events in 1984 compared with 337,000 at 11 races in 1983.

Another sports-car series, the International Motor Sports Assn. (IMSA) Camel GT, ran the same number of events (17) both years, but added 29,000 spectators in 1984.

Drag racing produced mixed results in 1984 as the National Hot Rod Assn. dropped from 12 to 11 Winston Championship events and fell to 318,000 spectators from 345,000 in 1983. Meanwhile, the International Hot Rod Assn. increased its schedule to eight events from seven and gained 13,000 attendes.

Sprint-car racing also produced mixed results as the World Of Outlaws circuit gained 15,000 fans in 1984 with 458,000 at 50 events compared with 443,000 at 49 races in 1983. USAC's Silver Crown Dirt Championship was hurt by bad weather, losing 20,000 fans after dropping to six from nine races.

174,765 cars built; severe weather a factor

Auto output slips below 180,000

By Louise Kertesz
Detroit Reporter

Last week's estimated domestic auto production slipped out of the 180,000 range for the first time (during a regular work week) since climbing to that level at the beginning of December.

Downtime at several Big Three assembly plants due to severe weather was a factor in the slowdown, as was the closing of American Motors' Kenosha (Wis.) facility for inventory adjustment.

Last week's scheduled total again included figures from striking General Motors plants in Bowling Green, Ky. (Chevrolet Corvette), and Wentzville, Mo. (Buick Electra and Oldsmobile Ninety-Eight).

Estimated output of 174,765 cars was down 3.52 percent from the previous week's 181,147 but was 5.51 percent better than the year-ago week's 165,639.

So far this year, 653,154 cars have been assembled, 6.41 percent more than the 613,786 built last year at this point.

Companies accounted for last week's scheduled production as follows: GM, 62.04 percent; Ford, 21.54 percent; Chrysler Corp., 12.93 percent; American Honda, 2.08 percent; Volkswagen of America, 1.30 percent, and New United Motor Mfg., Inc., 0.11 percent.

All Ford plants worked daily overtime last week except for the days when severe weather intervened.

GM scheduled two overtime shifts Saturday (Jan. 26) at the following plants: Flint (Buick B and G lines); Detroit; Fairfax, Kans.; Janesville, Wis.; Lakewood, Ga.; Lordstown, O.; Norwood, O., and Oklahoma City.

Honda scheduled 10 hours of overtime Saturday at its Marysville (O.) plant. The same plant worked two overtime hours once during the week.

Truck production rises to 66,880 for year's high

U.S. truck makers last week expected their highest weekly production so far this year and the highest since mid-December—66,880 units.

The figure was up 4.72 percent from the previous week's 63,867 and was 10.01 percent better than the year-ago week's 60,793.

The targeted production increase was reported despite several plant shutdowns caused by snow and subzero weather.

Year-to-date, 233,483 trucks have been assembled, keeping pace (up 1.96 percent) with last year's 228,995 completed at this point.

All Ford plants worked daily overtime last week.

General Motors scheduled two overtime shifts Saturday (Jan. 26) at its plants in Flint (No. 1 and 2); Janesville, Wis.; St. Louis; Pontiac (No. 5), and Lordstown, O.

One overtime shift was scheduled Saturday at GM's plant in Detroit.

Michigan dealers call odometer fraud 'epidemic'

By Richard Johnson
Detroit Reporter

New-car dealers in Michigan say a "very substantial" number of cars with rolled-back odometers are coming into the state, and they have begun taking steps to combat the problem, according to the executive vice president of the Detroit Auto Dealers Assn.

With odometer fraud reaching "epidemic proportions," executive director Daniel Hayes said the association recently asked the Michigan attorney general's office and secretary of state to conduct a seminar on the subject for its members. The session, conducted last Monday (Jan. 21) was aimed at advising dealership personnel how to recognize and help prevent the problem.

The secretary of state last year revoked the licenses of 15 used-car dealers and suspended the licenses of 19 others in connection with an ongoing probe into odometer tampering. The charges against dealers included both illegal altering of odometers and knowingly selling cars with inaccurate readings.

Hayes noted that none of the suspensions or revocations involved new-car dealers or members of the Detroit dealer group. But, he added, "that does not mean that new-car dealers don't have a problem in this area."

"We have a very substantial problem because there are seemingly endless numbers of used cars coming into Michigan from out of state," he said. "Most of them apparently originate as fleet cars or daily rental cars, which have been cleaned up and detailed to the extent that it is very difficult to isolate them out as high-mileage cars."

Hayes said the cars look like low-mileage vehicles and appear to run like them. The rollbacks are generally aimed at increasing the value of used cars by $700 to $800, he added.

• Michigan's investigation began in January, 1983.The Secretary of State Automotive Bureau's Car Dealer Division now routinely examines out-of-state titles on cars coming into Michigan for retail sale. Extensive ownership and mileage history checks are made if title paperwork exhibits signs of odometer alteration.

In particular, the bureau has tracked cars coming into the state with Kentucky, Tennessee and Indiana titles. A sampling last year of cars purchased by Michigan dealers from suppliers in Kentucky showed that 87 percent of the odometers had been rolled back.

To help new-car dealers recognize and alleviate odometer fraud, attorneys for the Detroit dealer group asked state officials to present the seminar, which was held at the Michigan State University Management Conference Center in Troy.

In addition, Hayes pledged that the association will cooperate with the attorney general's office and the secretary of state "as they attempt to clean up the odometer rollback situation and let the chips fall where they may."

He also said the group will continue to support proposed federal legislation that would require that titles and registrations include information making it easier to trace rollbacks.

Auto assembly in Canada trails pace of 1984

With almost a full month of 1985 production behind them, Canadian car makers are building at a somewhat slower pace than a year ago. But truck makers have already reached a weekly high better than any week last year.

Last week, 21,046 cars were scheduled for assembly, up 5.30 percent from the previous week's 19,987 and 10.91 percent more than the year-ago week's 18,976.

Year-to-date, 75,542 cars have been completed, 9.76 percent less than the 83,716 built at this time last year.

Last week's scheduled build of 18,621 trucks was a bit lower (1.79 percent) than the previous week's 18,961, which topped 1984's weekly high of 18,853, reached in the week ending June 23.

International Harvester's Chatham (Ont.) plant was closed last Monday (Jan. 21) because of bad weather.

At Chrysler's Windsor (Ont.) plant, 2,580 Plymouth Voyagers, 2,742 Dodge Caravans, and 594 Mini Ram vans were scheduled for assembly, bringing the T-115 total for the year to 22,040.

Taurus, Sable unveiled

Ford claims record for roominess

Ford claims its new 1986 Taurus, along with its sister the Mercury Sable, provides more combined passenger and luggage room than any car in the mid-size family-car market. The auto maker is also stressing the extent to which computers are involved in designing and producing the cars. Story, other pictures on Page 61.

'86-model Mercury

The Mercury Sable, slated for introduction this fall, is distinguished by a "light bar" which sweeps across the front. Initially, it will have a six-cylinder, 60-degree V-6 pushrod 140-HP engine with port-mounted fuel injectors. Later, a four-cylinder, 2.5-liter engine will be added.

NADA will play it tough in Washington this year

By Robert M. Lienert
Editor

SAN FRANCISCO.—Contentment and satisfaction, tempered by cautious optimism for 1985, was the prevailing mood of the 68th NADA Convention and Exposition which closed here last week.

Yet, dealers seemed to be in need of reassurance about the future. They got that from the incoming president, William J. Symes, who told the closing session that dealers must be competitors to succeed and that NADA is going to be a "very aggressive competitor" on their behalf.

By all traditional measurements, the convention was a star-spangled success.

Final count may push attendance to a record, topping the 18,000-plus scored in 1979 at the Las Vegas convention. Workshop attendance neared 20,000. Aisles at the exposition were jam-packed with shoppers.

Many of the workshops—particularly those concerned with leasing and computers—had overflow crowds spilling into the corridors.

Symes, a Cadillac dealer in Pasadena, Calif., told the convention that the biggest job for 1985 lies in Washington, where there is a heavy legislative agenda. The primary item there, he said, is fleet subsidies.

"The manufacturers feel it is necessary to sell cars to the fleets cheaper than they sell to us," Symes said. "I don't understand that philosophy and I sure as hell don't agree with it.

"When manufacturers sell cars to someone else cheaper than they sell to their own franchised dealers, that's illegal procedure and somebody has to blow the whistle. All we are asking for is a fair ball game."

Symes, a onetime sports announcer, lapsed into football metaphor in ripping into fleet subsidies. The fleets, he said, need only five yards to make a first down, while dealers still are expected to gain the traditional 10.

NADA, he said, will play a vigorous lobbying role when Congress starts rewriting the tax laws.

"We will be making the case of

Industry can compete, Commerce Dept. says

By Jake Kelderman
Washington Reporter

WASHINGTON.—Barring a severe recession in combination with a "radical" increase in Japanese auto imports, U.S. auto makers should be able to compete head-to-head with the rest of the world in 1985, according to a confidential Department of Commerce report on the status of the industry.

The report, a copy of which was obtained by Automotive News, was prepared for the Cabinet Council on Commerce and Trade, which met late last week to take up the controversial issue of whether to push for continuation of import quotas on Japanese automobiles. A majority at the meeting reportedly favored allowing the quotas to lapse, although no position was taken.

Those quotas are imposed by the Japanese government and currently limit the Japanese makers to 1.85 million autos annually. They now are in the fourth year of what was to have been a three-year limitation period.

The quotas are scheduled to expire at the end of March, but pressure is building from Chrysler Corp., Ford Motor Co., the UAW and various legislators to keep them in place for another year or until the industry is fully recovered.

The report from the Commerce Department's Office of Automotive Affairs and Consumer Goods appears to say recovery already is here.

"The U.S. companies have largely recovered from the recession of 1980-1982 and are in much stronger financial shape, with income for 1984 expected to be about $10 billion," the report says.

Measured in constant 1978 dollars, this is $1.4 billion more than the record $4.9 billion the industry recorded in its last good year, 1978, the report says.

This is not to suggest the industry's balance sheets have returned to 1978 levels, the report notes. But it concludes this may never again occur anyway because of fundamental changes in the "basic financial and operating structure" of the industry.

For example, the industry has implemented aggressive working capital management programs designed to reduce receivables and inventories while stretching payables. That reduces liquidity but increases cash flow, the Commerce report says.

That improvement in cash flow should be sufficient to finance capital expenditures, debt repayment and dividends in 1985 without substantial borrowing, Com-

That's Ford's sales goal for new upper-middle cars

Taurus/Sable: 2.5 million by 1990

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—Ford Motor Co. expects to sell 2.5 million Taurus/Sable cars by the end of the decade, or about 500,000 a year, in a bid to capture a greater share of the emerging upper-middle segment of the new-car market, company executives said during the car's unveiling last week.

Harold (Red) Poling said the price range of the new line would be between $8,200 and $12,200. Poling became president of Ford on Feb. 1. He formerly was executive vice preisadent, North American Automotive Operations.

Explaining that the new series cost Ford nearly $3 billion, Poling said production is expected to begin in Atlanta, followed six months later by assembly at Ford's Chicago plant. The new models are slated for a fall introduction.

"We will launch them into a rising tide," Poling said of the segment the new cars will occupy. "Sable and Taurus are in the upper-middle segment, which has grown 7 percentage points during the last four years. Ford and Mercury cars have increased their share of this segment in the U.S. from 12.1 percent in 1980 to 15.9 percent in 1984.

"In Canada, our share has increased to 15.7 percent. We also expect that Sable and Taurus will appeal to a broader base that now covers six of 10 potential buyers in the compact, mid-speciality and large-car segment," Poling said.

To reach that goal of 2.5 million owners by the end of the decade, Poling estimated that Ford will sell 410,000 of the cars during the 1986 model year, with sales climbing to the 550,000-unit level in the succeeding model years.

Philip Caldwell, who retired Feb. 1 as Ford chairman and chief executive, said the Taurus/Sable line is aimed directly at the baby-boom generation and is a statement by the company of what a family car should be.

"Taurus and Sable speak to the large segment of the U.S. population born after World War II," Caldwell said. "There are a lot of them. By 1990, they will be well into middle age and the nation as a whole, for this and other reasons, will have more than 90 million households—14 million more than when we entered this decade.

"By every standard of objective measurement, we know that Taurus and Sable are best-in-class, best in segment. No six-passenger family car is better either absolutely or in feature content. These are what, in our opinion, contemporary family cars ought to be."

When asked if the modular construction and CAD/CAM techniques are a response to General Motors' Saturn project, Caldwell quipped, "While other manufacturers may have projects that are

Labor contract reached at Sterling Heights

DETROIT.—A new three-year labor agreement has been reached at Chrysler Corp.'s new Sterling Heights (Mich.) plant. The contract has seven skilled and nine production job classifications, fewer than many other pacts. The hourly rate for an assembler is $13.05. The UAW local has not been assigned a number yet, the union said. Sterling Heights builds Chrysler's new Dodge Lancer and Chrysler LeBaron GTS.

G-line closes in Flint, B-line to follow

FLINT.—Buick's factory No. 40—the G-line that had been producing the rear-wheel-drive Buick Regal and Oldsmobile Cutlass Supreme—went down Friday (Feb. 1). It is the first closing in the conversion to the Buick City project. Production of the G-cars was moved to Pontiac for the 1985 and 1986 model years. This Friday (Feb. 8), the B-line (Buick LeSabre and Chevrolet Impala-Caprice) will close. Production of the

AMC undercuts Chrysler

New incentive fuels small-car sales battle

By Joseph Bohn
Marketing Editor

The battle in the small-car segment continues to heat up, as American Motors is undercutting Chrysler's 8.8-percent finance promotion by a third of a percentage point.

A new low-interest APR program from Chevrolet will also put a lot of extra heat on the compact pickup market.

AMC's new 8.5-percent finance offer on Alliance and Encore subcompacts runs from Feb. 1 to 28. It is available on contracts up to 36 months.

For loans of 37 to 42 months, a 9.5-percent finance rate is being offered. And on loans of 43 to 48 months, the rate is 10.5 percent.

AMC said that on a $7,000 loan for 36 months, customers save about $535, compared with the 13-percent rate a bank would charge. Its finance offer is available at local dealers' lending institutions or through AM Credit.

AMC is buying down contracts up to 13 percent.

The offer is available on vehicles bought and delivered during February.

AMC previously rolled back prices of these same vehicles Dec.26. Both actions reflect the severity of competition in the subcompact sector.

Chrysler is running an 8.8-percent APR program on its subcompact Omni/Horizon lines.

The subcompact car segment generally hasn't been too strong.

Marketing analysts were a little surprised at GM's new 8.8-percent financing program, which runs from Feb. 1 through March 31 on Chevy S-10 and GMC S-15 compact pickup trucks.

The offer is availble through GMAC only.

Chevrolet had a 68-day supply of S-10 pickups and GMC, a 66-day supply of S-15 pickups as of Feb. 20, according to industry sources.

That's a tad high, but would not normally be enough to warrant an APR program.

GM may be countering some of the importers' efforts, like Nissan's 8.8-percent program on trucks. But, as one observer pointed out, "if they are, they sure waited long enough." Nissan has been running its program for months on end.

The most likely reason for GM's move is probably to satisfy a CAFE issue. The company, with strong sales of big-engine trucks, may be having trouble meeting the fuel economy standards on trucks.

Importers generally have been very aggressive in the compact truck segment, the only area where they are not constrained by quotas.

Industry sources estimate that altogether the Japanese importers had a 35-day supply of compact pickups as of Jan. 20.

Ford, with an estimated 70 days' supply of compact Ranger pickups as of Jan. 20, is expected to move rather quickly to counter the new GM program. It now has to contend with both GM and the Japanese incentives.

Ford may not offer low-interest financing, but is certain to come up with some kind of program quickly.

Iacocca gets engaged; no wedding date set

DETROIT.—Chrysler Chairman Lee A. Iacocca, 60, confirmed his engagement to Peggy Johnson, a BBD&O account executive on leave to work on the Statue of Liberty restoration project. No wedding date has been set.

Johnson, 34, is a former Pan Am flight attendent. It will be her first marriage. Iacocca has been widowed for nearly two years. The couple met while working on the Statue of Liberty project and became engaged at Christmas.

An arresting jump

A Long Beach (Calif.) police officer shows what a good feeling it is to drive a Toyota "paddy wagon." Long Beach is the first city in the U.S. to buy the converted Toyota cargo vans for use as patrol vehicles. When the need arises, the vans also can be used to pick up as many as eight prisoners from other on-duty patrol cars and shuttle them to the station. Norwalk Toyota, Norwalk, Calif., handled the sale and conversion of the vehicles.

More capacity for the same size market

Bidwell warns of a tougher sell

By Joseph Bohn
Marketing Editor

Chrysler Corp. is still moving merchandise at a fast clip, but it's not as easy a sell as last year, according to Bennett E. Bidwell, executive vice president.

"You've got a helluva lot more (industry) capacity this year chasing the same size market," he said. He added that this forces Chrysler and everyone else to market more aggressively.

He pointed to Chrysler's new Sterling Heights (Mich.) plant, extra shifts at Ford and General Motors, increasing production at Honda's Marysville (O.) plant, the upcoming addition of car production at Nissan's plant in Smyrna, Tenn., and an increase in import quotas as providing much more competition than last year when there were production constraints and shortages.

"That was a pull year; this year is going to be more push," Bidwell added.

Chrysler's inventories climbed to 90 days Jan. 1, and it has been using free automatic transmission giveaways on K-cars and 8.8 percent interest subvention on L-body subcompacts, plus other incentives, to sustain the momentum.

But, Bidwell noted, the company has enough wholesale orders to sustain its current production rates through February and partly into March and "that's not bad, considering the history of Chrysler."

"We're trying to stay well ahead of the plant because of the quality effort," he said. "We've committed to keeping a minimum 10-day schedule on hand at all plants, at all times.

"This is the season when everybody's days' supply goes up. If you go into spring with anything, you've got to carry a fairly high days' supply," he pointed out, adding that Chrysler had 100,000 more cars on hand than last year when it was short on product.

He said the company hit its sales program for December and into January.

"If we stay on program, we'll be fine. If we start missing program, actual stocks will turn out higher than program stocks," he added.

Minivans continue to be Chrysler's hottest sellers, though with competition from General Motors and, later this year, Ford Motor Co., Chrysler is prepared to switch to more conventional advertising.

"We may take a little more time to explain that ours (minivan) is a car in the minds of the public, and theirs aren't," he said.

Bidwell thinks the market potential for minivans is greater than many people think because of the heavy crossover of former car owners.

The big percentage of two-door sedan tradeins on minivans "continues to astound us," he added, because Chrysler had been expecting a lot of station wagon converts.

"Those people (minivan buyers) were heading toward multi-purpose vehicles. They were leaving two-door America." he said. In the process, they were looking at vehicles like the Bronco II, Jeep Cherokee and Toyota Van.

He believes truck sales, bouyed by such a trend, will continue escalating steadily, while car sales may plateau or even decline.

Interestingly, Chrysler deferred plans for a second minivan plant in favor of continuing its rear-drive large cars, as much to placate dealers as anything else. It has been able to keep profits the same for both Dodge and Chrysler Plymouth dealer groups.

The Chrysler-Plymouth dealer organization was "pretty much up in arms" over thoughts of losing their profitable Chrysler Fifth Avenue model, although losing the Diplomat "didn't mean much

GM reinvests in software firm

General Motors has invested an additional $1.05 million in Teknowledge, Inc., a Palo Alto (Calif.) computer software company specializing in "artificial intelligence."

Previously, GM invested $3 million in the company, one of several equity investments it has made recently in high-tech firms.

"Artificial intelligence" is a specialized computer science that uses broad-based data bases and "reasoning" logic to simulate the problem-solving process used by human experts.

GM hopes to be able to apply so-called "artificial intelligence" to such fields as auto design and repair diagnostics. Currently, according to Teknowledge executives, work for GM accounts for about 10 percent of its volume. GM's investment represents about 10 percent of Teknowledge equity.

Chrysler's Concept 90 has running prototype

Chrysler Corp. recently completed a running prototype for its "Concept 90" small-car program —reportedly the company's answer to General Motors' Saturn. Completion of the prototype is an indication Chrysler is only months behind GM in hardware development.

However, sources close to the program say Chrysler has no firm plans to produce the vehicle.

The "Concept 90" car has been developed as a test bed for low-cost manufacturing technology and running gear. The prototype is reportedly front-wheel drive, close in size to the current Omni/Horizon, and built on a relatively conventional steel platform, although it does include a significant number of composite components.

It represents input from both Chrysler advanced development engineers and outside suppliers.

Meanwhile, Chrysler said it has purchased an option on a former Western Electric plant in Indianapolis as a potential site for a new assembly plant.

A Chrysler spokesman says the company will not make a decision on whether to exercise its option until after a decision is made on extending the voluntary restraint agreement with the Japanese.

The plant is a likely site for future minivan assembly, according to Chrysler insiders. Chrysler delayed a second minivan plant in favor of large-car production late last year, but has been reluctant to expand its manufacturing capacity. — DAN MC COSH

Dealer's bold display proves profitable

ST. LOUIS.—A Lincoln dealer here is displaying a Cadillac in his showroom. Through advertising, Paul Cerame invited prospective customers to his dealership to compare a 1985 Cadillac Sedan DeVille and a Lincoln Town Car, positioned side by side under a tent.

The result? Cerame was the number one luxury car Lincoln-Mercury dealer in the city last November.

Sales up, outlook bright; now he goes to Ford Division

Rewey helped put L-M on a winning track

By Richard Johnson
Detroit Reporter

Robert Rewey, who took over this week as Ford Division general manager, is leaving behind what may be the domestic industry's hottest car division: Lincoln-Mercury.

At 46, Rewey is on a fast track at Ford Motor Co. and is getting much of the credit for L-M's recent success. He joined Lincoln-Mercury in 1978 and was general marketing manager, general sales manager and, finally, general manager before being tabbed in December for his new assignment.

During the past two years, L-M's volume has grown at well beyond the industry pace. L-M picked up more than a percentage point in market share in both 1983 and 1984 and also earned unprecedented plaudits in the 1984 J.D. Power and Associates customer satisfaction survey.

During a recent interview with Automotive News, Rewey attributed L-M's gains to improved product offerings in the middle of the market, a quality commitment and a conscious effort to upgrade customer service.

In the interview, Rewey also said:

1. There are no plans to stop selling the division's large car, the Grand Marquis, even though the corporation is in a deficit position with respect to federal CAFE credits. He said a "tremendous investment" is underway to make the Grand Marquis/Crown Victoria powertrain more fuel efficient.

2. A replacement for the aging rear-drive Continental will arrive in two or three years.

3. L-M will sell no cars

Western Star develops 6x6 mixer

Western Star Trucks has developed a lightweight 6x6 construction truck for both on-highway and off-road use. Two prototype 6x6 mixers were delivered to Palmetto Truck Sales, Miami, for testing. The truck, powered by a Cummins L-10 diesel, is expected to be available this summer.

Isuzu bus/RV chassis will be built in U.S.

By Arthur Flax
Assistant Truck Editor

EL MONTE, Calif.—Isuzu Trucks of America, Inc., will build a bus/RV chassis assembly plant in the Eastern U.S. and expand its operations by the end of 1985, according to Steven M. Allen, vice president and general manager.

Isuzu Trucks, said Allen, will assemble its front-engine MR and rear-engine LT forward-control chassis, commonly used for airport shuttle buses and recreational vehicles, from units shipped to the U.S. "knocked down."

Isuzu currently brings the chassis into the U.S. fully assembled. Allen estimated the company will sell more than 400 bus chassis this year.

He said the company "more than likely" will continue to import fully assembled bus/RV chassis for customers on the West Coast.

Allen said the new plant will allow Isuzu to better tailor its bus/RV chassis to customer requirements. At this point, however, he said the impact of the new plant on sales volume cannot be projected.

"A number of customers request that we modify the chassis (to fit their bus and RV bodies)," he said. "Rather than take the chassis to a hack shop or have them modified in Japan, where they are assembled on a high-volume line, we felt there was an opportunity for a plant here that can accommodate those customers."

Allen also announced that Isuzu Trucks of America, Inc., has discontinued its affiliation with American Isuzu Motors, Inc., the U.S. distributor of Isuzu cars and compact trucks, and is now a direct subsidiary of Isuzu Motors, Ltd., in Japan. Isuzu Trucks' headquarters will remain in South El Monte.

He said the reorganization "represents the faith and confidence the parent company has in its U.S. truck venture."

Runyon to be keynoter at NTEA convention

OAK PARK, Mich.—Marvin T. Runyon, president, Nissan Motor Mfg. Corp., U.S.A., will be the keynote speaker at the National Truck Equipment Assn.'s 21st annual convention at the Monterey (Calif.) Conference Center Feb. 27-March 2. He will speak at the opening business session Feb. 28.

Planned for the convention, the theme of which is "Charting Your Future," are a number of management seminars and 147 exhibits of new products and services.

After Runyon's remarks, Dr. Albert Bates, president, Profit Planning Group, Boulder, Colo., will discuss strategic planning in a continuation of his recent NTEA "Profitability" seminars.

At the morning session March 1, Joseph B. Olson, president, and Steven L. Buth, marketing vice president, Spokane Computer Services, Inc., will discuss trends in inventory management and how computers fit into truck-equipment management systems.

NTEA noted that Spokane Computer Services is the developer of the industry computer program it endorses.

Dr. Drea Zigarmi, senior associate, the Blanchard Training and Development Group, will explain how to apply techniques of "The One-Minute Manager" at the morning's second session.

"The Future of the Truck-Equipment Industry: The Impact of Manufacturer/Distributor Relations" will be the subject of an industry panel at the morning session March 2. The moderator will be Bert Klopfenstein, president, Koenig, Inc. The NTEA's legal counsel, Larry McCaffrey, will be a participant.

The two-hour session will center on several key industry issues, including what distributors and manufacturers expect of one another, whether distributors should insist on supplier contracts and the legal advantages and disadvantages of contracts.

truck industry news

11-month totals also top mark established in 1978

November registrations hit peak

November registrations of new trucks of all types in the U.S. were the highest for the month in industry history, and the 11-month total also set a record.

During the month, according to R.L. Polk & Co. statistics, 341,471 new vehicles were registered, an

Table on Page 34

increase of 34.9 percent over the year-earlier 253,205, and 8.8 percent greater than the 313,958 units tallied in the same month in 1978.

Through November, the total was 3,686,240, up 39.4 percent from the previous year's 2,644,686. It was 2.3 percent greater than the former high of 3,602,709 tallies established in 1978, when the 12-month count reached its highest level ever.

Eleven-month registrations in the three major market segments in 1984 were up significantly from the year earlier, with big advances in all eight weight classifications.

The light-truck count in the January-November period was up 38.9 percent to a record 3,454,729 units, compared with 2,486,652 in 1983. The total also was 5.3 percent higher than the previous peak of 3,282,345 units registered in 1978.

Medium-truck tallies through November climbed to 53,372, a gain of 23.5 percent over the year-earlier 43,200. But the count was 63.8 percent below the 147,528 units tallied in the comparable period six years earlier.

Through November, heavy-truck registrations totaled 178,139 units, up 55.1 percent from the previous year's 114,834 and 3.1 percent greater than the 172,836 recorded in 1978.

However, the 1984 count was 9 percent below the record 195,848 heavies registered in the like period in 1979.

No. 1 Ford increased its lead over runnerup Chevrolet by almost 15,000 units in November, rolling up an 11-month total of 1,060,437. The Chevrolet count through November was 996,931 units.

Group 1 registrations for the 11 months hit an alltime high of 1,983,239 units, up 41.5 percent from the previous year's 1,401,898 and 92.1 percent greater than the 1,032,473 tallied in the same period six years earlier.

In Group 2, there was a sharp contrast in the totals over the six-year span. The total through November was 1,438,067, a gain of 34.9 percent over the previous year's 1,065,772, but 34.7 percent below the record 2,202,524 units registered in 1978.

There was a dramatic upturn in Group 3 tallies over 1983 for the 11 months, but again, the count was far less than that in 1978.

Through November, there were 33,423 Group 3 registrations, an increase of 76.1 percent over the year-earlier 18,982 units, but 29.4 percent fewer than the 47,348 tallies six years earlier.

The 11-month Group 4 count also was far ahead of the year earlier and far below that for 1978. There were 644 tallies in 1984, compared with 306 the previous year and 13,386 in 1978.

Group 5 tallies totaled 3,870 through November, five times greater than the year-earlier 765 and 45.2 percent higher than the 2,666 units registered in the like period six years earlier.

In Group 6, where the count has been declining steadily since the switch from gasoline power to diesel in the mid-1970s, there were 48,858 tallies through November, up 16 percent from the

Continued on Page 27, Col. 1

HD registrations for 11 months up 55.1 percent

Registrations of new heavy trucks in the U.S. during the first 11 months of 1984 totaled 178,139 units, according to R.L. Polk & Co. statistics, an increase of 55.1 percent over the year-earlier 114,834 units.

In November, 17,715 units were registered, a gain of 60.5 percent over the 11,039 tallied in the same month the previous year.

Registrations of Group 7 trucks through the first 11 months totaled 60,703, up 36.2 percent over the 44,570 in the year-earlier period.

The Group 8 count through November was 117,436, an increase of 67.1 percent over the previous year's 70,264.

International continued to lead Ford in heavy-duty truck registrations with a 11-month total of 40,621 units, compared with 34,147 for runnerup Ford.

In November, International increased its lead over Ford by 735 units.

International was also No. 1 in Group 8 registrations with 26,769 tallies through November, while Ford was the Group 7 leader with 23,151 units.

Automotive News analysis of new-car registrations based on R.L. Polk & Co. statistical report. New York, Oklahoma, 1984, from manufacturers' sales records. Oklahoma '83 figures not available. Maine for Oct., 1984, temporarily delayed.

October total is 834,300

Month's registrations rise 10 pct.

By Jenny L. King
Detroit Reporter

New-car registrations in October, 1984, slipped some 40,000 units from the September level but were ahead of the year-earlier October sum by a respectable margin.

Table on Page 53

According to figures from R.L. Polk & Co., total registrations of new cars last October reached 834,300, up 10.24 percent from 756,795 for the same month in 1983. September registrations were healthier; the September total was 874,290.

From October to October, the import segment of the market dipped 0.09 percentage points, to 24.97 percent from 25.06 percent. Import registrations, however, were up 9.83 percent, to 208,330 from 189,688.

The stronger domestic market was inhibited by scattered labor strikes against General Motors in September, keeping the No. 1U.S. auto maker from matching its year-ago registrations for the month and, simultaneously, slowing the momentum the domestics had been building throughout the year.

Domestic registrations in October totaled 625,970, up 10.38 percent over 567,107 a year earlier but off 2.69 percent from the preceding month's 643,261.

Ford Motor Co. made the greatest gain of any manufacturer in October, adding 3.01 percentage points to its share of the market. Ford was up to 20.77 percent from 17.76 percent. Chrysler Corp. claimed an extra 1.69 percentage points and was up to 10.33 percent from 8.64 percent. GM dropped 4.39 percentage points, to 42.09 from 46.48 percent.

American Motors was pressed down to 1.84 percent from 2.05 percent, imports dipped 0.09 percentage points to 24.97 percent from 25.06 percent and the 24 miscellaneous domestic cars registered hadn't the strength to hold a significant share of the 1984 total They had 0.01 percent in October, 1983.

The market class breakdown among domestic cars showed subcompacts, compacts and luxuries increasing. Subcompacts were up to 16.36 percent from 14.98 percent. Compacts grew to 24.08 percent from 22.02 percent. Luxury cars were up to 12.34 percent from 8.20 percent.

Meanwhile, intermediates tumbled to 32.89 percent from 38.55 percent, and standards dropped to 14.33 percent from 16.25 percent.

Of the total market, imports claimed the largest piece, 24.97 percent. Intermediates were second with 24.68 percent, followed by compacts at 18.07 percent, subcompacts at 12.28 percent, standards at 10.75 percent and luxury models at 9.25 percent.

The October, 1983, market class lineup included: Imports at 25.06 percent, intermediates at 28.89 percent, compacts at 16.50 percent, subcompacts at 11.23 percent, standards at 12.18 percent and luxury cars at 6.14 percent.

Registrations for the first 10 months of 1984 totaled 8,479,096, up 15.94 percent from 7,313,078 in 1983. Domestics for that period were up 21.24 percent, to 6,389,456 from 5,270,204.

Imports climbed 2.29 percent year to year, rising to 2,089,640 from 2,042,874. Their share of the market, however, plunged 3.28 percentage points, to 24.65 percent from 27.93 percent.

In the 10-month period, GM, Ford and Chrysler increased their penetration of the market as the imports, AMC and miscellaneous domestics slipped.

GM was up 1.18 percentage points, to 44.93 percent from 43.75 percent. Ford gained 2.17 percentage points, lifting itself to 19.07 percent from 16.90 percent. Chrysler was up 0.16 percentage points, to 9.44 percent from 9.28 percent.

Along with the imports' loss of 3.28 percentage points was a 0.22 percentage-point drop by AMC, which fell to 1.91 percent from 2.13 percent. Miscellaneous domestics dropped to zero from 0.01 percent.

Top-level personnel shuffle at Toyota Motor Sales

LOS ANGELES.—Several top-level executive shifts and the appointment of two new regional managers were announced by Toyota Motor Sales, U.S.A., last week.

Robert McMillan, vice president of sales, has been given dealer relations in addition to his sales duties. His new responsibilities include dealer development and business management. McMillan reports to Jim Perkins, Toyota's group vice president, sales, marketing and distribution.

Warren Christell, formerly vice president of marketing, has been moved to the new position of vice president, business planning. He is responsible for evaluating and developing new business opportunities for Toyota. Christell reports to Yale Gieszl, senior vice president for finance and administration.

Jim Press has been appointed general marketing and distribution manager and is responsible for advertising, merchandising, sales training, planning operations and import operations. He formerly was corporate manager for distribution and planning. Press also reports to Perkins.

Dennis Clements has been appointed general manager of the New York region. Ren Rooney, formerly assistant general manager of the Los Angeles region, succeeds Clements as Denver regional manager. Both report to McMillan.

STRETCH YOUR PROFITS WITH OUR BIG BOY 4-DOOR.

We can "stretch" your class 6 or 7 truck chassis in four weeks or less at a surprisingly low cost and you've got yourself a new profit center. These conversions are in high demand for large crews with equipment—like construction companies, utilities, oil companies, etc.

The Conversion Process.
Our conversions are done by experienced customizers who use heavy-duty steel, not fiberglass like some conversion companies do. A standard conversion includes: 33½" "stretch" on Chevrolets or GMC's, 35½" on Ford's, seating for six, matching interior trim, full undercoating, full-length running boards, and painting to match original color. And we can do special interior work such as carpeting, hide-a-bed seating, captain's chairs and custom painting. We will also be glad to work with you on any special customizing you may need. You're only limited by your imagination.

For details and special dealership pricing, call or write today. Exclusive dealerships available now.

In training dealership employes

Arizona college works with GM

GLENDALE, Ariz.—Dedication ceremonies have been held at the $250,000 Glendale Community College Automotive Technology Complex, and nearly 300 students have begun attending classes in automotive repair.

The college offers a two-year associate degree in applied science for automotive technology.

The student body includes 25 who are employes of auto dealerships in Arizona, New Mexico and California. Those students, mostly in their upper teens and all high school graduates, are part of a General Motors effort called the Automotive Service Educational Program. It began late in August and will continue for 2½ years.

Phil Randolph, chairman of the school's technology department, said, "The course for the GM dealership employes provides them with great career possibilities in the car repair field."

The students pay tuition of $250 per semester. In some cases, the dealerships pay the tuition for their employes.

The program is designed to expose the students to the engine designs and electronic components used in new GM autos.

Randolph said that "a considerable amount of electronics is coming into our business of cars and the students from the dealerships must know about these advances and sophisticated equipment if they are to remain in the competitive worldwide market."

He added, "It's really what education should be. We don't allow our people to stagnate, especially in an industry that's changing."

Eight GM cars were donated to the college's complex for use during the classes and more will be provided.

Four classrooms are part of the automotive complex. Four full-time and eight part-time teachers handle the teaching duties for the entire complex with special teachers assigned to the GM students.

When the GM students complete the course, they will have been exposed to subjects like engineering theory, electricity, carburetion, engine overhaul, air-conditioning, front-end chassis, brakes, powertrain and electronic engine control. Trouble-shooting is also part of the training, according to instructor Errol Stephenson.

"These students are not here to learn about upholstery installation or body painting but just mechanics," Stephenson said, "and on Mondays and Wednesdays, we offer them a quick-service class."

He said final exams will be given in each of the subject categories each semester.

"When these students return to their dealerships, they will be thoroughly equipped with automotive knowledge," Stephenson said.

Since the student earns while working for the dealership sponsor, a considerable portion of the costs of the program are offset. The student is also required to own a prescribed basic hand tool set. The student can select any brand of tools and assistance in obtaining an educational discount may be arranged for most popular brands. Students are urged to check with their sponsor or the college before purchasing tools.

The GM students are told that the Automotive Service Educational Program is not easy and not for everyone. They are told that it requires an ability to work well with their hands and the ability to think and learn.

Eugene Dorr, associate director for educational services for the Arizona Community College Board, referred to the new $250,000 center and the program with GM as "a perfect example of partnership" between industry and education.

Glendale Community College is one of the seven Maricopa Colleges. Founded in 1966, it has a 160-acre campus and has about 13,000 day and evening students.

U.S. truck tallies in November hit alltime high

Continued from Page 16

year-earlier 42,129. But the 1984 total was 62.8 percent below the 131,476 units registered in the same period in 1978.

Group 7—the beneficiary of the growth in mid-range diesel popularity—produced significant gains in 1984 over both 1983 and 1978.

Through November, there were a record 60,703 registrations, an increase of 36.2 percent over the previous year's 44,570 and 75.2 percent higher than the 34,657 units tallied six years earlier.

Eleven-month Group 8 registrations were up 67.1 percent to 117,436 units, compared with the year-earlier 70,264. The total, however, was 15 percent below the 138,179 tallied in 1978 and 22.9 percent less the the record 152,391 registered in 1979.

The big gainers in registrations penetration were marketers of downsized vehicles and big trucks.

Dodge's share of the 11-month total was up 1.95 percentage points over the previous year and Plymouth's was 1.68 points higher. Sales of the minivans were mainly responsible for the increases.

Jeep penetration was 1.20 points greater, with the downsized Cherokee and Wagoneers the major contributors to the boost in registrations.

Big trucks are experiencing their best year since 1979, and small gains in penetrations were achieved by Mack, Kenworth, Peterbilt, White, Freightliner and Western Star.

Chevrolet and Ford had the biggest declines in share of the January-November total. Chevrolet's penetration was down 3.35 points and Ford's share was off 2.97 points.

INTRODUCING BUDD UNI-MOUNT-10... A BETTER MOUNTING SYSTEM.

Five years ago, we gave our engineers this challenge: Develop a new wheel and wheel mounting system that will simplify wheel maintenance and reduce life-cycle costs.

Today, we proudly present the solution: Uni-Mount-10™, a metric-designed, hub-piloted, single flange nut mounting system that effectively cuts both wheel installation time and replacement costs. This system

- has only one set of nuts to be tightened, for faster mounting and demounting. This also reduces fastener inventory.
- features all right-hand threads, which cuts the variety of fasteners to be stocked and eliminates confusion.
- incorporates a two-piece flange nut for high clamping force with excellent resistance to vibration and shock. The flat face design eliminates ball-seat wear and distortion.
- conforms to International Standards Organization (ISO) specifications for worldwide application. This means you can order hubs, axles and drums from any manufacturer in the world who adheres to ISO standards.

Budd Designation	Bolt Circle	Wheel Size	Tire Size	Load Capacity	Availability
Uni-Mount-10	285.75mm	22.5x8.25	11R22.5	7,200 lbs.	10/84
Uni-Mount-10	285.75mm	24.5x8.25	11R24.5	7,030 lbs.	10/84
Uni-Mount-10	335.00mm	22.5x8.25	11R22.5	7,200 lbs.	6/85*
Uni-Mount-8	275.00mm	22.5x8.25	11R22.5	6,200 lbs.	6/85*

BUDD UNI-MOUNT-10... A BETTER SELECTION.

There are two 10-hole Uni-Mount-10 wheels currently available with 285.75mm bolt circles (equal dimensionally and in load capacity to Budd's best-selling Ledge-Weld™ 10-hole 11¾" wheels). Both are suitable for low-profile and standard tires in the 22.5 and 24.5 sizes. Two more Uni-Mount wheels are being developed for specialized applications: a 10-hole 335mm wheel and an 8-hole 275mm wheel. The load capacities and availability for each of these wheels are listed in the chart above.

BUDD UNI-MOUNT-10... A BETTER WARRANTY.

Budd's new Uni-Mount-10 wheels utilize technology developed in our popular Ledge-Weld™ design and proven in over four million applications. They were designed using the latest computerized methods, including finite element analysis and road simulation testing. And they've achieved fatigue life scores high enough to qualify for Budd's Ten-Year Warranty. This warranty is good for the full 10-year period, regardless of product ownership. And if any Budd Uni-Mount wheel is found defective, as defined in our warranty, it will be replaced without charge, f.o.b. factory.

BUDD UNI-MOUNT-10... A BETTER ALTERNATIVE.

Whether you're specifying components for a Class 7 or 8 truck, trailer or upgrading existing equipment, Uni-Mount-10 is a better alternative. For more information, contact The Budd Co., Wheel and Brake Division, 12141 Charlevoix, Detroit, MI 48215. Or call toll-free 1-800-521-7770. In Michigan, 1-313-823-9100.

Budd goes one better:
Introducing the new Budd Uni-Mount-10.

Griffith elected to head Saab dealer council

ORANGE, Conn.—David A. Griffith has been elected chairman of the Saab National Dealer Advisory Council, which represents the 330 Saab car dealers in the U.S.

Griffith is president of Alan BMW-Saab, Edmonds, Wash. He has been a Saab dealer since 1978.

Two new members were elected to the Saab Dealer Council: Gary Blake, of Gary Blake Saab, Exeter, N.H., and Edmund Jussen Jr., of Star Lincoln-Mercury Sales, Glendale, Calif.

Completing the 1985 Saab Dealer Council are returning members: Paul Choiniere, P.J.'s Auto Village, South Burlington, Vt.; F. William Bryan, Bill Bryan Imports, Winter Park, Fla.; Richard Wigglesworth, Wigglesworth Imports, West Chicago, Ill., and Neil C. Bland, Saab of Houston, Houston.

Symes promises strong fight against fleet subsidies

NADA to be tough in Washington

Continued from Page 1

our industry to see that our ability to compete in the local market isn't destroyed by some obscure phrase in a tax reform act," he said.

Dealers also will fight domestic-content legislation, he said, because "we need to allow our manufacturers to use every resource they can find, in this country or abroad, to provide better products for our customers."

Among other objectives for 1985 listed by Symes were:

1. Striving for nationwide measures to curb odometer rollbacks.

2. Implementation of a reasonable policy on auto safety. NADA supports mandatory belt-use laws.

3. Strengthened factory-dealer relationhips.

Speaking of the aborted Porsche plan last year to change its distribution system, Symes said, "I would be surprised if that kind of idea doesn't pop up again somewhere else.

"On the other hand, we ought to put forward some new ideas of our own to bring the franchise system up to date. Our line groups will be taking the dealer message to the manufacturers and importers."

Symes said dealers must continue to provide a fair deal, good service, honest advertising and customer satisfaction. Manufacturers, he said, must help dealers to be effective competitors for consumer dollars by understanding the level of quality that the customer is demanding today.

"Quality can't be sacrificed for volume," he said. "This is no longer just a numbers game."

Symes hinted at tougher competitive times to come when he said, "Last year, we had strong demand and a limited supply, so profits were good. As I look at 1985, I see a more plentiful supply and possibly softer demand. We will need to be ready to deal . . . We will be successful in 1985 because dealers are confident competitors."

Convention headquarters, the exposition and the workshops were in the sprawling Moscone Center, while the opening and closing general sessions were in the Civic Auditorium about a mile away. A fleet of buses made a series of round trips to carry thousands of conventioneers from Moscone Center to the Auditorium. It was a bold attempt and was largely successful even though the last of the bus riders came straggling into the general sessions 20 minutes late.

At the opening session, President Reagan addressed the dealers by videotape. Said the President: "I want to take this opportunity to thank all of you for the support you've given us in our efforts to build a new era of lasting economic growth without inflation. You stood with us when the going was rough, and I'll never forget your encouragement.

" . . . Your industry is among America's greatest and most valued assets . . . You can be proud of the role your industry is playihg in our eonomic expansion."

The President noted that one of the 14 millon vehicles sold last year was a pickup "that will be getting a lot of use out at our ranch."

Formally taking office with Symes at the closing session were James Woulfe, Dublin, Calif., first vice president; Jack Price, Albuquerque, secretary, and Anthony Ursomarso, Wilmington,, Del., treasurer.

Two major topics of interest and discussion were two cars getting their first dealer exposure here—Hyundai and Yugo. Hyundai, built in South Korea, scored amazing market gains in Canada last year in its first year on the market there.

In San Francisco, Hyundai held a reception at one of the larger ballrooms. Long before the ballrom doors swung open, the foyer was crowded with pushers and shovers, trying to see one of two videos presenting the car or to pick up an envelope which contained two brochures and a dealership application.

Neither Hyundai nor Yugo—the new Malcolm Bricklin enterprise—had exhibits at the NADA exhibition. The Yugoslavian-built Yugo was on display at a site about a mile away from Moscone Center, and a Yugo shuttle bus kept busy carrying interested dealers back and forth. Bricklin had three Yugos on display and they were undergoing meticulous inspection by prospective dealers throughout the convention.

The 1986 convention and exposition will be held Feb. 1-4 in New Orleans.

Volvo Dealers of Excellence

Volvo Dealers of Excellence pose with the Kosta Boda crystal presented to them by Jospeh L. Nicolato, senior vice president, Volvo of America, at the introduction of the 1985 Volvos in Orlando. The dealers were honored for outstanding professional achievement and dedicated service to Volvo customers.

Was brief seizure of Avanti partly caused by rumors?

SOUTH BEND.—The seizure of Avanti Motor Corp. by the 1st Source Bank here for one night late last month may have been caused in part by rumors that the company would leave the city, according to Stephen Blake, Avanti chief executive.

The company has returned to buisiness as usual. Blake emphasized that it continues to produce cars, is current on its loan payments and is in full posession of its property.

The bank, he said, "took action on a technicality. It was a basic misunderstanding. Why they decided to take action was a surprise to us . . . the building might be one reason."

A 1st Source Bank executive had no comment on the seizure other than a statement issued jointly with Avanti saying that differences had been resolved.

Blake said Avanti has been looking for a new building for over a year. The factory is currently located in a 100-year-old former Studebaker plant that Blake said "is crumbling." South Bend is the company's first choice for a new plant location, he said.

"We don't want to leave South Bend," he said."We just can't find an acceptable building to move into. I'm sure there is something around. We've contacted other cities here and in Michigan. We were looking in a bunch of communities.

"It got out that we were looking in the Detroit area. That, coupled with the disagreement over financing, caused the bank to take action," Blake said.

Avanti was negotiating for a new financing package when the action was taken against it, according to Blake.

He said, "If we go to another building, or build, whatever we do, it's going to cost money."

Since Blake, formerly a Washington-area real estate developer and builder, bought Avanti in 1982, he has built a dealer network, modernized the 23-year-old sport coupe and developed a convertible and special performance model. He has also boosted production of the car from 188 in 1982 to some 310 in 1984.

He hopes to sell 360 cars this year, including 200 convertibles.

Blake's reign at Avanti, however, has not been without its difficulties. For example, his effort to improve the surface finish of the cars backfired last year when paint was found to be lifting off the bodies in the area of filler material, the result of incompatible materials.

"We were on our way to a much larger year, close to 400 cars. Paint problems required us to redo 270 or so," he said.

Avanti has filed a $3 million lawsuit against Ditzler Automotive Finishes of PPG Industries, Inc., Blake said.

Blake believes the company will have an "operating profit" for 1984 when final figures are in.

Auto industry can compete, Commerce Dept. declares

Continued from Page 1

merce says. But it notes two exceptions of the four: Chrysler, which will have a 1985 tax liability for the first time in years, and American Motors, whose earnings are still "modest."

Internally generated cash was $12.3 billion for the first nine months of 1984, $3.4 billion ahead of the same period in 1983, the report says. For the full year, cash should exceed $16 billion, Commerce concludes.

Analysts for the department also note, however, that because capital expenditures and dividends are expected to increase rapidly in 1985, a large accumulation of cash might not be possible this year.

In addition to improving cash flow, the companies have managed to widen the operating profit margin from 7.10 percent in 1978 to 7.17 percent for the first three quarters of 1984. They boosted their return on sales from 4.03 percent in 1978 to 6.38 percent for the first three quarters of 1984, the report notes.

The ratio of long-term debt to stockholders' equity improved from 0.25 on Dec. 31, 1983, to 0.16 on Sept. 30, 1984, for U.S. auto makers, but that is still above the 0.11 ratio of the banner 1978 year, the report notes.

Liquidity improved from $5.7 billion at the end of 1983 to $9.0 billion on Sept. 30, 1984.

Balance sheet indicators

Heart attacks prove fatal to Sanchez, chief of Saturn

By Marjorie Sorge
Labor Editor

Joseph J. Sanchez, 54, newly appointed president of General Motors' Saturn Corp., died Jan. 28 in Lansing after suffering two heart attacks in three days.

Mr. Sanchez, who had headed GM's Oldsmobile operations and was a GM vice president, was named head of the new Saturn Corp. about four weeks ago.

According to GM Chairman Roger B. Smith, Mr. Sanchez was the unanimous pick of everybody at GM for the job as Saturn president.

"We extend our deepest sympathies to Mrs. Sanchez and the Sanchez boys at this time," Smith said last week. "The Sanchez family, General Motors and the auto industry have lost a bright star."

As general manager of Oldsmobile, Mr. Sanchez was able to develop a good rapport with the UAW on the GM20 project, a skill that will be needed in the new subsidiary where the company and the union work so closely together.

In one interview with this reporter, Mr. Sanchez was so excited about a movie, "Our Car"—created entirely by the union workers—that he made me promise not to leave until I'd seen it. The movie was the workers' view of the new GM20 cars, their part in the cars' creation and their part in the Oldsmobile family.

The film was also shown to numerous civic groups in the Lansing area.

Gary Watson, president of UAW Local 652 in Lansing, told Automotive News in an earlier interview that he was especially impressed with Mr. Sanchez since Mr. Sanchez came to the union local to meet him—something almost unheard of at GM.

Many reporters were also impressed with Mr. Sanchez. He had the ability not only to get his point across during an interview, but also to make the reporter look beyond the obvious answer into what it meant to the entire corporation and the industry. He was indeed a visionary and a shining star.

Mr. Sanchez was a native of New York and received his bachelor's degree from City College of New York. He began his overseas work for GM in 1960 as a field sales representative in Santiago, Chile.

In 1964, he became a zone manager for GM Overseas Distribution Corp., based in Panama. He moved to Caracas as vehicle sales manager of General Motors de Venezuela in 1965 and was namedmanaging director of General Motors Uruguaya in 1968.

He became director of sales for General Motors Argentina in 1972 and was named managing director later that year. He returned to Uruguay in 1974 as regional manager for GM Overseas Distribution Corp., became managing director of General Motors do Brasil in 1976 and was also responsible for GM Uruguaya from 1980 until he went to Oldsmobile in 1983.

He was elected a GM vice president in 1979.

Mr. Sanchez is survived by his wife, Joy, and three sons.

Iacocca gift of stock valued at $1.2 million

WASHINGTON.—Chrysler Corp. Chairman Lee A. Iacocca in mid-December made a gift of 35,000 shares of Chrysler common stock to an undisclosed recipient, according to a filing with the Securities and Exchange Commission.

After the gift, worth some $1.2 million, Iacocca owns 15,800 shares. SEC rules require executives to report changes in stockholdings.

H. Mead Norton, 83; Oklahoma dealer leader

OKLAHOMA CITY.—H. Mead Norton, long a prominent figure in Oklahoma and national dealer circles, died Jan. 21. He was 83.

Mr. Norton entered the auto business in 1914 at the age of 13, and by 1940 he was a partner in 17 dealerships. He was a partner in a Buick dealership here for more than 50 years.

He served in the Oklahoma House of Representatives from 1937 to 1940 and was an Oklahoma state senator from 1940 to 1948. He was executive director of the Oklahoma Motor Vehicle Commission from 1964 to 1984.

Mr. Norton was a former president of the Oklahoma Automobile Dealers Assn. and was an NADA director from 1950 to 1963.

In the late 1950s, Mr. Norton formed and led the Franchised Dealers Survival Assn., which fought, unsuccessfully, to have territory security reinstated as part of the new-car dealer franchise.

Nancy Lou Tonkin

PORTLAND, Ore.—Nancy Lou Tonkin, 52, wife of Ron B. Tonkin, local automobile dealer, drowned in the Willamette River Jan. 23. A Portland native, she was a women's clothing store consultant and cook-book co-author.

Low-key chairman converted a staggering loss into record profits

Caldwell retires after guiding Ford Motor to the heights

Continued from Page 2

Canada. He ran an international organization that achieved $7.9 billion in sales in 1976, Caldwell's last full year as head of the overseas empire.

With Iacocca's star falling in early 1977, Caldwell was elected vice chairman of the board and made a member of the newly created "Office of the Chief Executive" with Iacocca and Henry Ford II.

On June 8 of the following year, he was given the new title of deputy chief executive officer and had clearly replaced Iacocca as Henry Ford II's heir apparent at the top of Ford Motor Co.

Within a few weeks, Iacocca was fired and Caldwell took over as president in the fall of 1978. In October, 1979, he became chief executive officer, and in March, 1980, he was named chairman, while Henry Ford II retained only a seat on the board and chairmanship of the Finance Committee.

With the U.S. auto industry floundering, Caldwell found himself in a sea of red ink early in his tenure as chairman. He was even rumored to be on thin ice with some Ford directors.

But car sales began to pick up steam in 1982 and dealer and customer reaction to the new aerodynamically styled Ford Thunderbird/Mercury Cougar, Ford Tempo/Mercury Topaz and Lincoln Mark VII models was generally positive.

The bold design stroke reportedly grew out of a visit Caldwell and President Donald Petersen paid to Ford's corporate styling center in the spring of 1980.

Under questioning from their bosses, designers admitted to being less than enthusiastic about what they had proposed for the future. Caldwell and Petersen agreed to turn Ford's stylists loose and the result was a streamlined look that quickly became the most distinctive design offered by U.S. auto makers.

Caldwell has also been credited with an innovative approach to labor contracts at a time when the industry was reeling and job security was the number one union issue.

The landmark 1982 contract between General Motors and Ford and the UAW was patterned at Ford after talks between the No. 1 auto maker and the union had broken down. The contract resulted in approximately $1 billion in wage and benefit concessions at Ford, but in turn set up a profit-sharing plan and job-security provisions.

His good relations with the UAW were made clear during a visit last week to the Rawsonville Electrical and Electronics Division plant in Ypsilanti Township, Mich. Caldwell was greeted warmly at the facility, which has both an extensive Employee Involvement (EI) program and the auto industry's first Pilot Employment Guarantee (PEG) agreement.

The EI agreement is a joint venture between the UAW and plant management that allows workers to participate in decision-making on matters that affect their jobs. The PEG program at Rawsonville, which was launched in March, 1984, guarantees freedom from indefinite layoffs in exchange for gains in workforce efficiencies.

UAW Local 898 at Rawsonville surprised the outgoing chairman last week by making him an honorary member, a first for the union.

Caldwell's final week as chairman was also marked by an appearance at the Los Angeles introduction of the company's new Taurus/Sable line.

In Los Angeles, Caldwell was asked to list his career highlights. He cited "Ford getting into the truck business in a big way, the changes in Philco and our international operations in total and, of course, the last five or six years stand out."

"But I served a considerable apprenticeship before any of that started," he added. "In a personal way, I did not enjoy the frequency with which I was put into different jobs. But I tell you it was a godsend at the end because I served just about every facet of the company at one time or another."

With success came some headaches for Caldwell. During the company's annual meeting last May, the chairman was called on to defend his 1983 compensation —a company record $1.4 million in salary and bonus—and his profit of $5.9 million from exercising stock options.

The issue of auto executive salaries became a subject of widespread discussion in 1983. At the reception for media members, Caldwell joked that a highlight of his days as chairman was "going on the David Brinkley show to defend my pay."

Caldwell, who will continue as a member of the corporate board of directors, was vague on his future plans during the Rawsonville visit.

"I have a schedule that is pretty full with things that are continuing," he said. "I have quite a few suggestions that I should do this or that, and I'll take a little time to sort them out."

During the recent interview with Automotive News, Caldwell said one of the most important assignments during his years as chairman was preparing for an orderly transition of power upon his retirement.

The result was the relatively low-key announcement last fall that Petersen would succeed Caldwell as chairman and that Harold Poling would move up to the president from executive vice president—North American Automotive Operations.

"We've been planning this ever since I walked into this office to take this job," said Caldwell. "One of the most important assignments I personally have is to provide for succession and to do all that's possible to make it smooth."

Ajemian is appointed to MVMA position

DETROIT.—MVMA has named Robert S. Ajemian to the post of manager, workplace and facilities, for the 10-member, Detroit-based manufacturers association.

Ajemian will be primarily involved with government proposals relating to health and safety in the motor vehicle manufacturing workplace. Ajemian served as senior industrial hygienist with Great Lakes Steel Division, National Steel Corp., before joining MVMA. He previously held industrial environmental control and hygiene posts with Bethlehem Steel Corp., Exxon-U.S.A Corp., Chrysler Corp. and the City of Detroit. He is a past president of the Michigan Industrial Hygiene Society.

Bad weather slashed previous week's total

Auto production jumps to 177,031

By Louise Kertesz
Detroit Reporter

U.S. auto production, pegged at 177,031 units last week, was up 14.24 percent from the previous week's 154,968.

Actual production reported for the previous week fell some 20,000 units short of a schedule already adjusted for weather-related curtailments.

That week's output fell below 160,000 for the first time (during a regular work week) since the first week of November.

All makers reported lost production due to severe weather that closed or slowed down several component and assembly plants in the Midwest and Northeast.

Last week's scheduled production was shared as follows: General Motors, 62.68 percent; Ford Motor Co., 20.16 percent; Chrysler Corp., 14.01 percent; American Honda, 1.83 percent; Volkswagen of America, 1.21 percent, and New United Motor Mfg., Inc., 0.11 percent.

AMC's Kenosha (Wis.) facility was down last week for inventory adjustment. Production is scheduled to resume today (Feb. 4).

Ford transferred production of the Crown Victoria and Grand Marquis from its St. Louis plant to St. Thomas, Ont., last week, as the U.S. facility continues to gear up for midyear introduction of the Aerostar minivan.

Ford's St. Louis plant had been reporting production of about 4,000 units a week.

GM has completed its callback of 1,000 workers for the second shift of GM20-car production in Lansing, effective today (Feb. 4).

GM's Buick G-line in Flint is down, effective today, for changeover from the rear-wheel-drive G-cars.

Production of the 1986 front-wheel-drive H-bodies or GM70-cars is scheduled to begin at the new Buick City on Sept. 16.

GM scheduled two overtime shifts Saturday (Feb. 2) at the following plants: Lansing (Plant No. 1); Arlington, Tex.; Fairfax, Kans.; Framingham, Mass.; Janesville, Wis.; Lakewood, Ga.; Leeds, Mo.; Lordstown, O.; Oklahoma City; Orion Township, Mich., and Wilmington, Del.

All Ford plants but one were scheduled to work daily overtime last week.

Wave of low-end imports called threat to U.S. dealers

By Jake Kelderman
Washington Reporter

SAN FRANCISCO.-Import auto dealers, enjoying one of their best years ever, were warned here by their leader not to repeat the sins of the past.

Robert McElwaine, president of American International Automobile Dealers Assn., suggested new importers on the horizon, such as Hyundai, Daewoo, Yugo and others may well do to import dealers what they themselves did to domestic-car dealers: Take away a market they thought exclusively theirs.

"The most significant changes in the auto industry have always taken place in the low end of the market," he told the more than 700 dealers gathered for their annual meeting during the NADA convention.

As McElwaine sees it, there is essentially no low-end market in America today.

"The $5,000 car exists only in television commercials, and it is as unreal as the happy, jolly, racially integrated saloons we see in the beer commercials," he said. U.S. makers are ignoring it again and the importers are ignoring it again as the former builds to satisfy a perceived need for larger cars and the latter goes upscale to offset the impact of import quotas.

We might laugh at entrepreneurs like Malcolm Bricklin and his Yugo, smirk at the Koreans and get positively hysterical over the periodic rumors of Moscow and the Russians getting ready to invade the U.S. market with a 20-year old Fiat design.

But, said McElwaine, "I wonder if we will still be laughing when our dealerships—with their $10,000, $12,000 and $17,000 cars on the showroom floor—are faced with across-the-street competition from dealerships offering cars for $3,600, $4,500, $5,000?"

The perils of a managed economy are many, he said. If we continue as now U.S. auto makers will be faced with even more competition, and the problems they are trying to solve through import quotas and other protectionist measures will also be worse.

"It's time for an end to import quotas," he told the audience that roared in support, "and I am convinced the import quotas will end on schedule April 1."

He asserted that President Reagan said it best in reply to those who argued that the U.S. should retaliate against those who restrict access to their markets.

McElwaine quoted the President as saying: "If two people are in the same boat and one of them shoots a hole in the bottom, it doesn't make sense for the other man to shoot another hole in the boat. That's not getting even, That's just getting wet."

Truck production shows big gain; 72,005 assembled

Domestic makers scheduled output of 72,005 trucks last week, an increase of 21.67 percent over the previous week's 59,183, when bad weather in the Midwest and Northeast took its toll on truck as well as car production.

General Motors, Ford Motor Co. and American Motors reported weather-related slowdowns.

In addition, production at GM's medium-duty truck plant in Pontiac was suspended from Friday, Jan. 25, to Thursday, Jan. 31, due to a shortage of engine components.

The previous week's output tumbled from the 60,000 level for the first time (except for holiday weeks) since the week ended Sept. 22, when 52,494 trucks were built.

Year-to-date, 297,791 trucks have been assembled, 2.86 percent more than the 289,504 built last year at this point.

All Ford Motor Co. plants scheduled daily overtime last week.

GM plants working two overtime shifts Saturday (Feb. 2) were: Flint (No. 1 and 2), Janesville (Wis.), Lordstown (O.), Pontiac (No. 5) and St. Louis.

GM plants in Moraine, O., and Detroit worked one overtime shift Saturday.

Canadian plants boost production to 20,446 cars

With 20,446 units scheduled for assembly, last week's auto production in Canada was up 16.92 percent over the previous week's 17,487. The prior week's total reflected lost production at General Motors and Ford Motor Co. plants due to bad weather.

Last week's scheduled build was about the same (up 1.50 percent) as the year-ago week's 20,143. But year-to-date output of 92,429 cars continues to lag behind last year's 102,012 at this point. The dip is 9.39 percent.

American Motors' Brampton (Ont.) plant is closed for two weeks for inventory adjustment. Production is scheduled to resume Feb. 11.

Scheduled output of 18,749 trucks last week was up 21.75 percent from the previous week's 15,399, which also reflected lost production due to severe weather.

Last week's estimated build was 10.43 percent better than the year-ago week's 16,979.

Chrysler's Windsor (Ont.) plant targeted production of 2,580 Plymouth Voyagers, 2,742 Dodge Caravans and 594 Mini Ram Vans last week, bringing the T-115 total so far this year to 27,376.

Domestic dealer total up for second year in row

By John K. Teahen Jr.
Managing Editor

Higher sales and higher profits meant more dealers for the domestic auto industry in 1984.

The annual Automotive News census found 20,902 dealerships handling domestic makes of passenger cars on Jan. 1 of this year, a gain of 61 over the 20,841 establishments in operation 12 months earlier.

It was the second consecutive yearly upturn; there was a gain of 42 outlets in 1983.

Those two consecutive increases followed a long, long period of declines. After a rise in 1955, the domestic dealer total dropped for 27 straight years before the 1983 advance.

Chrysler Corp. and Ford Motor Co. were responsible for the 1984 increase. Chrysler added 124 dealers and Ford was up 56. There were drops of 75 for General Motors, 61 for American Motors-Renault and seven for Volkswagen.

That's an aggregate gain of 37. A change in the number of intercorporate duals boosted the overall upswing to 61.

All figures in this article and in the accompanying tables refer to the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

The upturns of 1983 and 1984 marked the first time since 1948-49 that the industry has shown consecutive gains in its dealer total. In that earlier era, the auto makers were rebuilding their dealer organizations after World War II.

And the 1983-84 gains followed one of the dreariest periods the industry has ever experienced. During the recession, there were losses of 1,607 dealerships in 1980, 984 in 1981 and 881 in 1982.

Last year brought gains in each of the first two quarters. There was a slip in the third quarter, then another rise in the fourth.

Here are the domestic dealer figures by quarters during the year:

Jan. 1, 1984	20,841
April 1, 1984	20,848
July 1, 1984	20,895
Oct. 1, 1984	20,863
Jan. 1, 1985	20,902

Franchise totals rose last year for every Big Three make except Chevrolet, with the Chrysler Corp. lines notching the biggest gains. Dodge and Plymouth added 149 franchises apiece and Chrysler was up 135. At Ford Motor Co., the rises were 58 for Mercury, 55 for Ford and 26 for Lincoln.

GM noted advances of 30 franchises apiece for Buick and Pontiac, 25 for Oldsmobile and 15 for Cadillac. Chevrolet was down 35,

Debuting in Chicago

Urby for the urban commuter

The Ghia Urby is making its debut this week on the Ford stand at the Chicago Auto Show. The design study by Ford's Ghia studios is three inches taller than an Escort but two feet shorter. The height gives the driver better visibility; the shortness, maneuverability. It is powered by a one-liter engine.

Rear-drive Cadillac to stay in '86 lineup

By Joseph Bohn
Marketing Editor

Cadillac has decided to keep its rear-drive, full-sized Fleetwood Brougham at least through 1986 and possibly into the 1987 and 1988 model years, according to Frank Cadicamo, director of merchandising.

He added that the market would determine its availability in the later years.

The division, in fact, has been furnishing dealer groups with print and TV ads on the current availability of its full-sized line, after discovering that many consumers believed it was not offered this year.

Part of the problem, Cadicamo conceded, was that Cadillac itself had originally thought the car might be phased out in December, 1984, and "many dealers advised customers along those lines."

"They set up their sales programs," advising customers to buy now "because there won't be any more. To a certain extent we did it to ourselves," Cadicamo said.

And Lincoln-Mercury has been implying in its ads that its Lincoln Town Car is the last full-sized luxury model left, he added.

"They've made subtle but pointed remarks, leading people to believe this," he said.

Cadillac became aware of the problem while doing focus group research on its 1986 Seville and Eldorado. The 1986 Eldorado is being downsized and reportedly will end up smaller than the front-drive DeVille.

Cadillac won't do a "last of the full-sized Eldorados" push, as it did back in the 1970s, when it began its downsizing cycle.

Instead, it will have commemorative editions of Eldorado and Seville, touting the "historic breed of Cadillacs" available with these lines.

They'll begin being available in dealerships in late March/early April. Cadicamo compared the commemorative editions with coins like those put out by the Franklin Mint. There's no limit to the number of models dealers can order or sell.

The cars will have special gold accents, special interior trim and other touches to set them apart.

The idea is simply to create "another level of awareness" in Cadillac's promotional efforts, Cadicamo said.

The division is buying extra print advertising for the effort and will also have TV commercials. The car lines appeal to different buying groups, so each commemorative edition will have its own individual program.

Cadillac elected to retain the

breaking news

Buick two-seater to bow in 1987½

CHICAGO.—Buick plans to introduce its two-seat luxury car, codenamed M-33, in 1987½, company officials said. The car, with an expected volume of 25,000 units a year, will be priced in the $20,000 range. It was designed by GM styling studios with protoypte body work done by an independent shop in Britain. The first running prototype is already in the U.S. Production body work also will be done in Britain.

Change due in company-car tax rule

WASHINGTON.—Senate Finance Chairman Robert Packwood, Oregon Democrat, said last week that Congress will work out a "rational alternative" to Internal Revenue Service rules governing personal use of business vehicles. He said that the alternative would affect the 10 percent of those who abuse use of business vehicles without affecting the other 90.

Tempo, Topaz to go 4x4

CHICAGO.—Ford Motor Co. will offer a part-time four-wheel-drive option for Tempo and Topaz in about one year, company executives said at the Chicago Auto Show. Axles will be by Dana; development was by Ford and Dana. Volume is estimated at 15,000 to 20,000 units a year.

Ford to restyle big cars

CHICAGO.—Ford is planning a styling update of its big rear-drive cars within the next year, Ford Motor Co. Sales Vice President Louis Lataif said here. The cars will be sold through the rest of the decade, according to another Ford executive. A late decision to save the EXP because of its recent sales increase will mean the car will go out of production for six months while its front end is reworked.

As it expands its financial services business

GM eyes credit cards, mortgages

By Michelle Krebs
and Marjorie Sorge
Automotive News Staff

Credit cards and mortgage banking appear to be General Motors' first major moves into expanding its financial services business.

GM may begin offering credit cards to car buyers which will be a step beyond its GM Protection Plan cards, which it began being issuing last fall. The GM Protection Plan card enables a GM car owner to charge accessories, parts and service at participating dealerships. The cards are issued through National Bank of Detroit's Delaware division.

Some sources envision that in the near future, GM will give new meaning to one-stop shopping. A GM credit card may be available which would not only allow customers to purchase cars and auto insurance, but also could eventually fill their total banking needs—from mortgages and mortgage insurance to brokerage and financial planning services.

The credit cards would provide a platform upon which GM could build as the U.S. moves toward becoming a checkless society. Eventually, plastic debit cards will be used for purchases and the money will be electronically deducted from the consumer's bank account, according to bank analysts.

GM also may enter the mortgage banking business. The auto maker confirmed last week it was in preliminary discussions with Norwest Corp., of Minneapolis, to buy its mortgage

An indication of makers' problems

NHTSA extends time to supply CAFE data

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—A sign of the problems expected by the European import companies as well as by Ford Motor Co. and General Motors in facing future CAFE standards is seen in requests for more time to respond to NHTSA's detailed fuel-economy questionnaire.

Docket closing time has been shifted from Feb. 8 to March 1.

This questionnaire will be used by NHTSA—theoretically at least—to determine if future CAFE standards are to be raised beyond the 1985 level of 27.5 MPG, in response to a formal petition for such action by the Center for Auto Safety.

However, since GM and Ford and virtually all European luxury imports have told the safety agency they already have trouble meeting the 1985 CAFE, it seems unlikely that NHTSA would raise the standard. The betting, in fact, is that NHTSA may be petitioned to lower the 1986 CAFE from 27.5 to 26 MPG, an action that can be taken administratively.

But a delay of even a few weeks is important for several reasons. If NHTSA delays unduly in acting on its petition, the Center for Auto Safety may return to court where its petition was rejected once before on grounds the issue was not ripe.

Another reason is that NHTSA issued an interpretation stating that no CAFE standard would be changed after the start of the model year. Knowledgeable rulemakers at NHTSA are saying that time is already starting to run out to address a 1986 standard.

Peugeot's pre-model 1985 CAFE filing indicates that it will miss the government's fuel-economy rule with a predicted 24.8 MPG. The French car builder's fuel-economy number indicates that not one European luxury-car manufacturer will meet U.S. Government fuel-economy standards.

Audi is an exception, since its CAFE is included with that of the imported Volkswagens. The combined Audi-VW import figure does meet the CAFE standard.

Discussions on changing the CAFE standards have been going on in Cabinet meetings. No decision has been reached although the Reagan Administration is thought to be generally sympathetic to relaxing or even eliminating fuel-economy standards.

Meanwhile, companies have been asking EPA to raise the CAFE adjustment allowance which EPA has proposed as 0.2 MPG for 1980 and later model years to compensate for changes in EPA's test procedure. GM wants manufacturer-specific adjustments; the others are satisfied with an industrywide factor and the latter seems likely to be the decision.

The companies, except for Chrysler, want the test procedure adjustment figure to be 0.3 MPG. They also want a 2 percent credit for the 1980 and 1981 model years and a 0.2 percent credit for model years 1982 through 1985 for so-called slippery oils along with EPA removing all restraints on use of such oils with the 1986 model year.

The companies are expecting some upward adjustment from EPA because of changes in the fuel properties of the test fuel. In addition, they want EPA to count all changes, even those that may be less than one-tenth of an MPG. Leaders in these filings (besides MVMA, which does not speak for Chrysler) include Volvo along with GM and Ford.

But a letter from Christopher M. Kennedy, Chrysler's director of Federal Government affairs, stated his company's position.

Kennedy said that in view of all the problems involved, "we believe the best course of action would be for EPA to make no CAFE adjustment whatever."

Morrow named senior VP of Crain operations

DETROIT.—William A. Morrow has been appointed senior vice president—operations of Crain Communications, Inc., effective April 1.

Morrow, a managing tax partner of the Detroit Region office of Touche Ross & Co., will be responsbile for all financial, legal and administrative operations of Crain and its subsidiaries. Crain Communications is the publisher of Automotive News and 24 other periodicals.

William A. Morrow

"We are delighted to have someone with Bill's experience and knowledge joining our company to assist us in the continued growth of our publishing base," said Keith Crain, vice chairman, and Rance Crain, president, in a joint statment.

Morrow, a member of the bar and a certified public accountant, will be based in Detroit.

Steed helps open show in Washington

NHTSA Administrator Diane K. Steed unbuckles the seat belt in the "ribbon-cutting" ceremony opening the International Auto Show in Washington. With Steed are, from left, Ted Weiner, show manager for Cahners Exposition Group, show producer; Peter Zourdos, show chairman; Mort Zetlin, chairman of the Automotive Trade Assn. National Capital Area, show sponsor, and Mike Murphy, retired ATANCA executive vice president.

'Word-of-mouth' ads to promote Jetta GLI

By Dan McCosh
Detroit Reporter

SANTA BARBARA, Calif.—Volkswagen of America, entranced by the success of its performance-oriented derivatives, plans to launch the Jetta GLI, a 100-HP version of the recently restyled Jetta, with virtually no advertising support.

James R. Fuller, Volkswagen Division vice president, said he expects to sell 20,000 GLI models, 20 percent of the 100,000 Jettas predicted for 1985, mainly with word-of-mouth advertising, a small number of magazine ads and no television.

"We'll be advertising the VW marque, with some mention of the Golf and Jetta," Fuller said."We'll also be running an ad schedule on the GTI (the performance derivative of the Golf)."

Fuller has been predicting a dramatic swing in VW's sales mix for 1985, the first year for the Golf replacement for the VW Rabbit. He anticipates that Jetta—basically a German-assembled notchback version of the Golf—will more than double its 1984 volume and end the year ahead of the new Golf hatchback.

Fuller said that despite a slow start hindered by fuel-injection parts shortages and a launch that was limited to two-door and 5-speed manual cars in limited colors, Golf should finish in the 90,000-unit range, with all VWoA sales totaling 275,000, including domestic and imported models.

• VW's imported models, up 34 percent in 1984, have been leading VW's sales—a pattern Fuller expects to continue in 1985. The trend is responsible for VW's American profitability, Fuller said, since a strong U.S. dollar combined with the higher pricing on imported models enhances the corporate return on those models.

VW also has found a profitible niche with its performance versions of its basic subcompacts.

The Golf GTI already is selling at a rate equivalent to 30 percent of U.S. sales, Fulller said, even better than the 20 percent anticipated for the GLI and up some 50 percent from the GTI version of the Rabbit.

VW also has completed a cost-reduction program in Europe and the U.S. aimed at improving its cost base, Fuller said. "We finally decided that our competition in the U.S. is the Japanese," he said. "That may not seem like much to you, but it was a big change for the Germans."

But he admitted that the U.S. manufacturing operation still is not profitable, despite improvements. "Nobody makes money on small cars in the U.S. today," Fuller said, but he denied that VW is planning to pull manufacturing out of the U.S.

The rumor persists, however, and sources at Chrysler Corp. said recently that VW approached that company to discuss a sale and was rejected in favor of a new Chrysler facility.

Earlier, VW had discussed joint small-car production at Westmoreland, Pa., with Chrysler, a proposal likewise rejected.

Fuller said VW still is considering adding the Jetta to its Westmoreland plant, but not until the capacity of its German factory is filled.

Auto sales rise 7 pct. for January

By Jenny L. King
Detroit Reporter

New-car sales in January continued to move at a good pace, keeping ahead of the year-ago levels but not climbing at the same rate as when the industry was emerging from the recession.

Domestic sales generally were good. Imports were up about 7 percent in volume as they slipped to a 24.90-percent share of the total market.

The combined domestic-import sales total for January was 836,-221, up 7.39 percent from 778,688 last year.

An extra selling day in January pushed the domestic total 7.65 percent above the comparable 1984 figure. On a daily-rate basis, sales were up just 3.33 percent, to an average of 24,155 (26 days) from 23,376 (25 days).

The six major makers delivered 628,037 new cars, an increase of nearly 45,000 units, or 7.65 percent, from 583,429 the preceding year.

It was the best January total since 1979 when 644,536 deliveries were reported. Record for the month was 735,427 notched in 1973.

Import sales numbered 208,184, up 6.69 percent from 195,259 a year earlier. It was the second highest total on the books. Record for the month was 217,690 in 1980.

Chrysler Corp. led the Big Three domestic makers in rate of year-to-year gain, up 22.87 percent, to 85,260 from 69,391. Ford Motor Co. was up 8.29 percent, to 150,762 from 139,222. General Motors added 18,000 new cars to its total and was up 5.25 percent, to 362,780 from 344,679.

Honda pulled way ahead of the competition among the Little Three with sales of 13,366 up 54.57 percent from 8,647. American Motors dropped 30.02 percent, to 9,987 from 14,271, and Volkswagen was down 18.52 percent to 5,882 from 7,219.

Chrysler's share of the domestic market expanded to 13.57 percent this January from 11.89 percent in 1984. Ford was up to 24.01 percent from 23.86 percent and GM

And dealers have some questions: Big cars, Saturn

Burger has a string of goals for Chevy sales

By Al Fleming
Industry Editor

SAN FRANCISCO.—Get the Nova into dealer showrooms. Produce more passenger versions of the Astro van. Capture at least 16.5 percent of the U.S. new-car market in 1985. Those thoughts are on the mind of Robert D. Burger, Chevrolet general manager, these days.

Chevrolet dealers, however, are pondering some other heavy matters. Among them: How much longer will they be selling the popular full-size, rear-wheel-drive Chevrolet? And how do they get a Saturn franchise?

"The Saturn thing bothers them," Burger admitted while chatting in a hotel suite during the NADA convention here last week. "But, really, the first thing dealers here (at the convention) are asking me is how much longer they'll have the Caprice.

"I tell them they'll have it as long as the market says it should be around—as long as we can sell it in the 250,000 to 300,000 annual range." Burger figures that could be "through the balance of this decade."

And what is he telling his dealers about Project Saturn? Under way for nearly three years, this is General Motors' clean-sheet effort to develop innovations to produce small cars in the U.S. that are cost-competitive with the lowest-priced imports.

Until an announcement Jan. 8 that Saturn Corp. would be a separate GM subsidiary with its own franchise and distribution network, current GM dealers, particularly those selling Chevrolets, took it for granted they would market the revolutionary low-cost Saturn

Continued on Page 20, Col. 3

61 outlets added in 2nd consecutive yearly increase

U.S. dealer total rises for 1984

Continued from Page 1

but its dealer total of 5,120 remains the highest in the industry.

Also on the downside for 1984 were Volkswagen, 7; AMC (Eagle), 43, and Renault (Alliance and Encore), 15.

There is more dualing within each of the Big Three companies than in the past. For example, Chrysler Corp. added 433 franchises last year, but its dealership total climbed by only 124.

Chrysler Corp. opened 1985 with 3,988 car dealerships, compared with 3,864 a year earlier. It was Chrysler's second straight gain, although it was not as hefty as 1983's increase of 227.

Franchise totals for the new year were Chrysler, 3,023; Plymouth, 2,980, and Dodge, 2,893.

In addition to its 3,988 car dealerships, Chrysler has six that handle only Dodge trucks. They are not included in the corporate car-dealership total or in the Dodge car-franchise total.

Ford Motor, like Chrysler, enjoyed its second straight upturn in car-dealership totals. Ford had 5,564 on Jan. 1, up 56 from 5,508 at the beginning of 1984.

Latest franchise totals are Ford, 4,732; Mercury, 2,738, and Lincoln, 1,578.

There are 116 dealerships that handle only Ford heavy-duty trucks. They are not included in the dealership total for Ford Motor or the franchise total for Ford Division.

GM was down 75 dealerships last year, dropping to 9,965 from 10,040, but it was GM's lightest loss since 1978.

The Jan. 1 franchise totals were Chevrolet, 5,120; Oldsmobile, 3,200; Pontiac, 3,010; Buick, 2,975, and Cadillac, 1,610.

The GM total of 9,965 includes only car dealerships. Adding the GMC Truck outlets that do not handle GM cars brings the count to 10,575.

AMC-Renault had 1,465 car outlets on Jan. 1, a dip of 61 from 1,526 when 1984 began. Franchise totals were 1,397 for AMC and 1,341 for Renault.

Both the AMC and Renault lines are handled by 1,273 of the combine's 1,465 dealershps, an average of 87 percent. AMC has 746 duals with Big Three cars and about 90 percent of those outlets also have Renault. Another 68 AMC locations are dualed with VW, and Renault is included in about half of them.

Volkswagen had 899 dealers on Jan. 1, a drop of seven for the 12-month period. About 150 VW outlets handle other makes of U.S. cars.

In the table accompanying this article, all VW dealerships are listed as "exclusives within corp." That is because Volkswagen of America produces only one line of domestic cars. The dealerships also handle VW imports and many have Audi, which is imported by VWoA. But this census involves only dealers handling domestic cars.

Aluminum-body HUMMER takes grand prize

The Aluminum Assn. awarded its grand prize in the 1984 Automotive Aluminum Design Competition to the HUMMER military vehicle. The High Mobility Multi-Purpose Wheeled Vehicle is produced for the U.S. Army by LTV Aerospace and Defense Co.'s AM General Division. The body is made entirely of aluminum to achieve the light weight required for airlifting by helicopter fleets.

Aluminum Assn. honors AM General's HUMMER

WASHINGTON.—The HUMMER military vehicle produced by the AM General Division of LTV Aerospace and Defense Co. has won the grand prize in the 1984 Automotive Aluminum Engineering Design Competition, the Aluminum Assn. announced.

Second prize went to the 1984-85 Corvette driveshaft, and third prize to the Pontiac Trans Am whaletail spoiler.

The winning entries represent the best new uses of aluminum's light weight, strength and corrosion resistance in automotive applications, the association said.

The HUMMER (High Mobility Multi-Purpose Wheeled Vehicle), being produced for the U.S. Army, features an all-aluminum body that gives it the light weight required for airlifting by helicopter fleets.

The HUMMER's design team that took the grand prize was: Arthur J. Dean, chief body engineer; Joseph E. Walasinski, assistant chief manufacturing engineer; Tim L. Clark, principal engineer, body; Charles S. Brinkley, chief tool engineer, stamping division; Gene W. Rakoczy, product engineer, body, and Robert A. Moore, manager, engineering stamping division.

Winner of the second prize was Barry Zackrisson, program manager of Dana Corp.'s Spicer Universal Joint Division, who designed the 1984-85 Corvette driveshaft, the first high-volume production aluminum driveshaft.

The General Motors Pontiac group design team that took third place with the structural beam for the Pontiac Trans Am whaletail spoiler included: Paul Ritchie, senior designer; James W. Blenman, senior project engineer; William H. Perry, engineering group manager; James W. Stark, senior project engineer; Raymond G. Temple, senior designer, and John C. Wellington, project engineer.

GM Linden plant seeks status as trade subzone

WASHINGTON.—General Motors' plant in Linden, N.J., has filed for foreign trade subzone status with the Commerce Department's Foreign Trade Zone Board.

GM said the majority of the parts used at the plant are of domestic origin, although 5 percent are imported from abroad. These imported parts include wiring harnesses, directional levers and radios.

The average duty rate for the imported compents is 4.8 percent. The duty rate for finished autos is 2.7 percent. Under zone procedures, imported components used in finished autos are dutiable under the lower duty rate for finished autos. Duties will not be levied on imported components used on vehicles for export.

The GM facility manufactures Buick Riveria, Oldsmobile Toronado and Cadillac. Comments on the GM petition will be taken until Feb. 25.

Days of 'benign competition' to change

New threat to dealer profits seen

By John A. Russell
New York Staff Writer

SAN FRANCISCO.—The days of "benign competition" between manufacturers will be changing in the coming years and dealers will find themselves thrust into a market where more and more businesses will be cutting away at traditional dealer profit centers.

This was the message of a workshop panel at the NADA convention.

The panel was made up of J. Ferron, head of the NADA Industry Analysis and Dealership Operations section; Maryann Keller, of Vilas-Fischer Associates, Ltd., in New York, and Martin J. Anderson, of Sector Research in Newton Center, Mass.

Keller gave the overview of what will be a hot market in the late 1980s and at the turn of the century. She noted that the Japanese can produce 950,000 to a little over one million units in the U.S. by the late 1980s. The Koreans are also looking hard at the U.S. market, as are other manufacturers.

She said that under the VRA, the Japanese exported higher-line cars to the U.S.

But demand will rise and there will be more fragmentation in the market because of new entries. Consumers will have more choice and to combat the rise in competition, manufacturers will want to control their distribution more.

Anderson outlined the new trends even more specifically for the dealers. He said the market will become fragmented in two ways. There will be a specialty market and a commodity or mass market. The speciality market is already developed with models designed to reach certain segments. This is illustrated with the introduction of the Merkur by Lincoln-Mercury.

He said that through the speciality market, dealers and consumers will see more derivatives of the same types of cars. In this market fewer dealers are needed, he said.

The prime market for both the Japanese and domestic manufacturers will be upscale for different reasons. The domestics must cover costs while the Japanese will attack this market to cover expansion.

The Europeans, who have had this market to themselves, will fight to retain their share.

Because of the increased competition, manufacturers will want more image control over the marques.

Ferron said that with this changing market manufacturers will demand greater control over the distribution system, which means the dealers.

But dealers will feel hotter competition from other dealers as well as other segments of the markets.

While he said the franchise system will survive, there will be fewer dealers, lower margins and more multiple franchise operations.

He said each department of the dealership will feel the forces of competition.

The new-car department will continue to have threats from the gray market and fleets and more pre-selling will be needed. As for used cars, dealers will have to realize if they have a daily rental operation this can be a source for their department.

Parts and service also will come under attack with narrowing parts margins and more competition from other sources for service.

And as more banks and independent companies get into financing, the F & I department will also suffer, he said.

VW deals merge

NORTH HAVEN, Conn.—Montesi Volkswagen and Townline Volkswagen have merged. The dealership is called Montesi Volkswagen.

Case involves complaints on 1976-79 vehicles

Class action due on GM automatics

WASHINGTON.—U.S. District Judge John A. Nordberg said he expects to certify a "failures class" in a private suit involving allegedly defective Type 200 transmissions in 1976—1979 General Motors vehicles.

This is contingent upon the naming of 25 more plaintiffs who have experienced "failure or malfunction of said transmissions within five years or 60,000 miles of original sale of vehicle, whichever first occurs, except those owners whose rights arise under the laws of a state that legally bars recovery against General Motors."

Beverly Moore, who brought the private class action and who also has one pending against Ford Motor Co. over the alleged defect of slipping from Park to Reverse in vehicles with automatic transmissions, saids there is no problem whatsoever in finding many more "failures" plaintiffs who bought their cars in non-privity states.

Moore told AUTOMOTIVE NEWS this will be the first nationwide class action involving an automotive defect to be certified under the Magnuson-Moss Act.

The case was filed in the Northern District of Illinois, Eastern Division, on May 1, 1980. Some of the cars involved are nine years old, and Moore has put all franchised transmission chains under subpena so that when the case is settled, it will be possible to find the owners so they can be reimbursed for repairs.Owners have reportedly paid $500 to $1,000 to replace those transmissions.

In a consent settlement with GM on Nov. 17, 1983, the FTC told owners of rear—wheel—drive vehicles of model year 1976 through model year 1983 they could seek adjustments by using local Better Business Bureaus. Some of those cases have been brought and settled.

In addition, New York State also sued GM on behalf of 2,300 residents of the state.

In registrations for October and 10 months of 1984

Import total up; market share dips

By Jenny L. King
Detroit Reporter

Although imports continued to match or exceed their year-earlier numbers pace, their penetration of the total U.S. market was eroded in October by the mightier domestic sales and ensuing registrations.

According to figures from R.L. Polk & Co., new import registrations in October were up 9.83 percent to 208,330 from 189,688 a year earlier. Imports' share of the market slipped to 24.97 percent from 25.06 percent the preceding year.

Registrations for the first 10 months were 2.29 percent ahead of January-October, 1983, to 2,089,640 from 2,042,874. Their year-to-date market share was down 3.28 percentage points, to 24.65 percent from 27.93 percent.

In October, Toyota reclaimed first place from Nissan, Honda moved into second from third place and Nissan sank from number one to number three in a year's time. An addition of 3,000 units helped Toyota win the top spot, and a gain of nearly 9,000 for Honda gave the Japanese-American auto maker an extra 2.82 percentage points in its market share.

Honda and imports outside the top 10 were the only ones to increase shares of the market. The remaining Japanese and German makers alike lost ground in October.

Toyota was off 0.10 percentage points, Nissan was down 1.83 percentage points, Mazda was off 0.22 percentage points and Subaru dropped 0.66 percentage points.

Volkswagen dropped 1.30 percentage points for the month, Volvo was off 0.42 percentage points, Mercedes-Benz was down 0.03 percentage points and BMW lost 0.61 percentage points.

Ten leading imports claimed 87.78 percent of the October, 1984, registrations total, down from 88.41 percent the preceding year.

The loss of market share for the imports was more dramatic for the 10 months than it was for October. Imports slipped to 24.65 percent from 27.93 percent in 1983.

•Distribution of the market among the major imports was rather tumultuous from 1983 to 1984. First-place Toyota was down in numbers and penetration, Nissan yielded second place to Honda and the latter's share of the market increased by 3.55 percentage points as Honda challenged Toyota for first place.

Toyota lost 2.11 percentage points and Nissan was down 2.38 percentage points. Mazda dropped 0.45 percentage points and Subaru was down 0.22 percentage points.

VW claimed an additional 0.67 percentage points, Volvo was up 0.20 percentage points, Mercedes was up 0.03 percentage points, Audi gained 0.94 percentage points and BMW was up 0.38 percentage points.

Ten imports held 89.62 percent of the import market for the 1984 period, up from 89.01 percent in 1983.

Still by far the largest importer, Japan nevertheless lost some ground from 1983 to 1984, both for October and for the 10 months. Japanese products represented 73.94 percent of the October, 1984, imports, down from 76.07 percent a year earlier.

German-built cars were 11.69 percent, up from 10.38 percent. U.S.-built Hondas and VWs accounted for 8.01 percent, up from 6.28 percent. Numbers by country of origin included:

	Oct., 1984	Oct., 1983
Japan	154,036	144,287
West Germany	24,358	19,683
United States	16,693	11,910
Sweden	8,791	8,200
France	2,519	3,781
Great Britain	1,029	1,254
Italy	886	466
Ireland	18	107
TOTAL	208,330	189,688

In the first 10 months of 1984, Japanese penetration of the imports market plunged to 71.97 percent from 77.00 percent in 1983. The German share grew to 12.46 percent from 10.98 percent and U.S. imports expanded to 8.10 percent from 4.91 percent. Numbers were as follows:

	10 months, 1984	10 months, 1983
Japan	1,503,886	1,572,991
West Germany	260,457	210,514
United States	169,274	100,269
Sweden	109,139	96,727
France	26,259	40,820
Great Britain	14,373	12,796
Italy	5,932	7,913
Ireland	320	844
TOTAL	2,089,640	2,042,874

Registrations of new imported trucks were up more than 20,000 units October to October, climbing 48.44 percent to 65,045 from 43,819. Following is a breakout of numbers for the major manufacturers:

	Oct., 1984	Oct., 1983
Toyota	25,109	14,372
Nissan	15,364	12,844
Mazda	10,375	6,114
Dodge Ram 50	5,797	3,700
Others	8,400	6,789
TOTAL	65,045	43,819

Imported truck registrations of 614,981 for the first 10 months of 1984 were up 51.38 percent from 406,241 the preceding year. Their numbers included:

	10 Mos., 1984	10 Mos., 1984
Toyota	239,076	143,874
Nissan	161,596	111,448
Mazda	96,758	55,726
Dodge Ram 50	40,320	26,308
Others	77,231	68,885
TOTAL	614,981	406,241

Three versions for Lancia Y10

Lancia's new Y10 will initially be presented in three versions: Fire, with the one-liter 45-HP engine recently unveiled by Fiat; Touring, with a 1.05-liter 55-HP power unit, and Turbo, with an 85-HP turbocharged version of the Touring engine. The car will be made at Fiat's Mirafiori factory in Turin, Italy. It will go on sale in Italy in March.

Lancia Y10 to debut in Geneva in early March

TURIN, Italy.—Fiat Auto's Lancia Division will debut its new small car in Geneva a few days before the official opening of the international auto show there March 7.

The car has been given the marketing name under which it was developed—Y10. Fiat performed a similar trick when its Tipo Uno eventually became the Uno hatchback.

Y10 will initially be offered in three versions: Fire, with the one-liter 45-HP engine recently unveiled by Fiat; Touring, with a 1.05-liter 55-HP power unit, and Turbo, with an 85-HP turbocharged version of the Touring unit.

The two larger-capacity engines will be sourced from Brazil. It will be the first appearance in a production car for the Fire engine, which is expected to become the mainstay small powerplant in the Fiat range.

The Y10 will be made at Fiat's Mirafiori factory in Turin. It will share the body assembly line with the Uno, but will be given a separate final assembly line.

It was initially planned as a replacement for the Autobianchi A112, but this 15-year-old car has maintained its popularity to such an extent that it will continue for the time being. The Y10 will go on sale in Italy in March, followed shortly afterward by exports to the rest of Europe.

Lancia production this year may reach 220,000, a major increase from last year's volume of 191,073. What Lancia does not know is to what extent Y10 will take sales from the A112, which is also marketed as a slightly upmarket small car with a price premium over similar Unos, Peugeot 205s and so on.

There is also the slow buildup of production for the new Thema luxury sedan. The lines are running much slower than anticipated, though Lancia insists this is simply to ensure that top quality is maintained during the start-up period.

But the Thema's launch in several markets has been delayed, as it has for the Saab 9000 which started life as a joint Italian-Swedish collaboration.

Last year's production of just over 191,000 was the best since the peak of the mid-1970s for Lancia. Lancia volume was up just under one percent at 102,658, while Autobianchi units increased more than 10 percent to 88,415.

The company's total European sales amounted to 185,786, a decrease of 0.8 percent. But as the overall new-car demand was down by a greater amount, Lancia reckons it enjoyed an increased market share (1.9 percent compared with 1.8 percent).

However, its worldwide sales reached a record of 192,182, compared with 184,761 for the previous year.

The Lancia Division was at the break-even point last year after many years of losses. This year's newer model range is expected to increase its market appeal, with resultant benefits to the balance sheet.

GM-Dina link may add 25,000 jobs in Mexico

MEXICO CITY.—The new partnership between Diesel Nacional (Dina) and General Motors' Mexican subsidiary, with financial and technical experts from both firms about to put the finishing touches on the pact, is expected to generate 25,000 new jobs within the next two years.

The Dina Group will give direct employment to 10,000 workers with 15,000 to be hired by the Mexican national auto parts industry.

The Dina administrative board estimated that exports for 1987 will bring in an estimated $500 million. The board stressed that this amount will be the minimum and foreign sales will be maintained at necessary levels to balance out the partnership's foreign-exchange budget.

GM know-how and high technology will make it possible for Dina to produce better trucks and engines, Dina said.

Mexico's auto parts industry will benefit from the partnership since vehicles produced by the venture will have a high national content of internally produced parts and components.

Show to highlight MR2

BUFFALO.—The Western New York Toyota Dealers have selected the Toyota MR2 as their featured car during the Buffalo Auto Show, Feb. 13-17. The two-passenger sports car has been named Import Car of the Year by Motor Trend magazine.

Car biz is booming in state

Missouri goes for auto title

JEFFERSON CITY, Mo.—Missouri's automotive industry is in "drive."

Reflecting the national economic recovery in general and the resurgence of the automotive industry in particular, production of 1984-model passenger cars in Missouri totaled 1,062,082 at seven Missouri plants, more than double 1983's output of 525,556 cars.

Missouri is second only to Michigan in auto production, according to the state's Economic Development Division.

That million-plus figure is just 5,274 short of the record 1978 number, and considerably over if you allow for the 50,000 1985-model cars built at the General Motors assembly plant in Wentzville between May and August, months usually included in the model year.Automotive manufacturing technology is state-of-the-art at the new General Motors assembly plant in Wentzville, a suburban area of St. Louis.

GM invested more than $500 million over three years to construct this mammoth facility, which covers 3.15 million square feet on a 500-acre site. Seventy-eight acres lie under a single roof, with 3,500 workers employed on a single shift.

Automotive employment rose more than 50 percent in Missouri from October, 1982, to October, 1983, with an increase from 15,-219 to 22,910 workers. By August, 1984, that figure had risen to 26,-200 with an additional 2,300 jobs scheduled for 1985 when the GM Wentzville plant opens a second shift.

• Payrolls have increased from $357.4 million in 1982 to $558 million in 1983 and to $964 million in 1984, the state agency reported.

Production is at near-capacity at most Missouri automotive plants, which are in the Kansas City and St. Louis metropolitan areas. Business has been so good for Chrysler Corp.'s suburban St. Louis plant, for example, that the company delayedplans to invest $250 million to convert a suburban St. Louis assembly plant to produce its popular miniwagon line. Instead it will continue indefinitely to manufacture its rear-wheel-drive large cars at the site.

Chrysler committed to eventually invest $250 million to convert its St. Louis Assembly Plant II to produce the Plymouth Voyager and Dodge Caravan miniwagons, tentatively starting in the 1986 model year.

That move will solidify employment for 3,400 workers at the plant.

Ford Motor Co.operated at maximum overtime at its Claycomo plant in suburban Kansas City in 1984, according to its public relations department, and added a second shift of some 750 workers to its truck line. Officials estimate the added workers brought an added $20 million to the payroll, which includes two shifts of employes on the automotive line.

The big news at the Ford Hazelwood plant in suburban St. Louis was the announcement of an expansion by 400,000 square feet to accomodate a changeover from production of automobiles to the new Aerostar vans for the 1986 model year.

Ford estimates 95 percent of the Hazelwood plant will be revamped with the latest in automated equipment, Production is scheduled to start in early 1985.

"With about one in six Missourians employed in the transportation industry, I can't overemphasize the importance of this industry to our state's economy," said J. H. Frappier, senior economic development advisor to the governor.

"One of this department's primary objectives is to attract auto parts suppliers to Missouri to serve the plants in Missouri and the surrounding states."

The November announcement by Bailey Corp., a New Hampshire-based rubber products manufacturer, that it plans to establish an auto parts manufacturing plant near Hermann underlines the commitment implied in Frappier's statement.

Gov. John D. Ashcroft said the firm initially would employ 95 workers, increasing to 230 by late 1985. The payroll is projected to eventually top $5.7 million a year.

Bailey officials said the plant would increase the firm's capacity for shipping to its Missouri customers, such as GM and Chrysler.

GM hosted a trade fair in July at its Wentzville plant at which GM encouraged 60 current and prospective parts suppliers to locate near its Missouri plants.

Gary L. Cowger, plant manager for GM Wentzville, said GM desired to cut down on freight costs, particularly for products that are less expensive than the cost of of the freight itself.The state's aggressive marketing is not limited to domestic prospects. Missouri attracted 65 members of the Japan Auto Parts Industries Assn. in February, 1984. They represented about 50 Japanese companies on a fact-finding mission to scout the state as a site for future investments.

The Japanese influx has been strong in Missouri and has already resulted in the opening of an office and plant for Tri-Con Industries of Japan in Columbia and Cape Gariardeau. Tri-Con manufactures automobile seats for Chrysler.

Additionally, Mazda, Mistubishi, and Toyota have established outlets in Missouri.

The boom in the automotive industry has greatly benefitted the Missouri economy. Contract Freighters, Inc., Joplin, announced plans in 1984 to expand its headquarters by 22,000 square feet as part of a $1.5-million project. The trucking company plans to add 200 to 250 employes to its current roster of 657.

Also, Johnson Controls' Battery Division, in St. Joseph, will be the largest automobile replacement battery manufacturing facility in the country, according to the firm, following a planned $7.5-million, 46,000-square-foot expansion that will add 100 jobs to its payroll of 420 workers. The plant, Johnson's most profitable of 14 throughout the nation, will increase its capacity from 12,000 batteries to 15,000 per day.

Johnson's fourth expansion at the St. Joseph site since its inception in 1973 will include production of its new Incredible Die-Hard product for one of its main clients, Sears. Wal-Mart and NAPA Auto Parts are among other clients.

China eyes Daihatsu for auto assembly

TOKYO.—Daihatsu Motor Co. was approached unofficially by China about building CKD kits of its minicar, Charade, there, the Japan Economic Journal reported.

A small Daihatsu commercial vehicle, the Hijet, already is assembled in China. Production target for this year is 5,000 units, which is eventually to rise to 20,-000. It is the first Japanese company to produce four-wheel vehicles in China.

Month's total is 836,221

Car sales up 7 pct. for January

Continued from Page 3

dropped to 57.76 percent from 59.08 percent.

Honda earned 2.13 percent, up from 1.48 percent. AMC was down to 1.59 percent from 2.45 percent and VW stayed below 1.00 percent at 0.94 percent, down from 1.24 percent.

With several domestic makes earning sales increases, Buick was the only one to report record sales for the month. Buick squeezed past the previous record of 68,550 set in 1984 with a 1.94-percent increase to 69,878. Oldsmobile tried to copy the pattern but failed by just a few hundred cars. Olds' 1984 record of 88,385 remained, with 88,143 sales reported this past January.

Chevrolet was up 13.59 percent, Pontiac was up 8.07 percent and Cadillac slipped 10.46 percent. Plymouth was up 24.62 percent, Chrysler was up 16.12 percent and Dodge sales increased by 27.06 percent.

Ford was up 16.00 percent, Mercury was up 4.91 percent and Lincoln reported a 28.59-percent increase. VW was down 18.52 percent, AMC was off 29.26 percent, Renault was up 30.14 percent and Honda was up 54.57 percent.

Import sales were a mixed bag in January. BMW had another record month while its usual record companions, Mercedes-Benz and Jaguar, each failed to match year-ago sales. BMW was up 27.59 percent to a record 5,439. Mercedes was down 7.22 percent and Jaguar was down 19.53 percent.

Audi was up 2.70 percent, Saab's 2,890 total was a January record as was Volvo's 10,056. Toyota was up 7.40 percent, Nissan was up 14.56 percent, Isuzu sales doubled as did Alfa Romeo sales. Mazda was down 8.73 percent, Subaru was down 15.23 percent, Honda was down 1.92 percent and Volkswagen was up 15.64 percent.

Domestic intermediates, with 26.07-percent of the market, surpassed the imports' 24.90-percent share. U.S. compacts had 17.81 percent, subcompacts had 13.67 percent, standards had 9.89 percent and luxury models had 7.66 percent.

Excluding imports, 34.71 percent of the January market went to intermediate-size cars, compacts had 23.72 percent, subcompacts had 18.20 percent, standards had 13.17 percent and luxuries had 10.20 percent.

Third-period domestic sales were up 6.54 percent, to 268,500 from 252,020 last year. It was the best Jan. 21-31 total since 1980 when 280,309 was the total.

The addition of a selling day this year made the difference. On a daily-rate basis, sales were down 4.11 percent, to 26,850 from 28,002.

For the period, Chrysler sales were up 25.83 percent, Ford was up 8.66 percent and GM was up 2.16 percent. Honda was up 90.63 percent, AMC dropped 41.56 percent and VW was down 8.69 percent.

GM held 56.56 percent of the domestic market, Ford had 23.98 percent, Chrysler earned 14.47 percent, Honda had 2.38 percent, AMC had 1.34 percent and VW had 1.27 percent.

Flaws reported to FTC in GM-BBB arbitration

WASHINGTON.—The FTC has received reports that the Better Business Bureau arbitration system which it set up to handle problems with GM cars, including 1978-80 diesels, is not working as it should.

This may be because local BBBs do not have lists of those owners of diesels who opted out of the class settlement made last summer in New York. Those owners are still eligible and, in fact, FTC's general counsel wants to find out whether the class settlement can legally curtail the FTC program for diesel owners who failed to opt out.

According to FTC staff, local BBBs are supposed to check with GM zone offices which are said to have copies of that list of consumers who are still in the BBB mediation/arbitration loop.

But Peter Lopes, of the New York-based Lemon on Wheels, cited several instances in which he said GM refused to consider cases even though the paperwork was completed before the cutoff date and despite exclusion from the class settlement.

Without the list of some 5,000 consumers who opted out of the class settlement, both consumers and the BBB are at a disadvantage. Moreover, the lists are extremely difficult to obtain and costly to duplicate.

Other diesel consumer action groups are reporting similar problems.

Bill to kill gray market is introduced in House

WASHINGTON.—The importation of vehicles that do not conform to U.S. emmission and safety standards would be banned under a bill introduced by Rep. Matthew J. Rinaldo, New Jersey Democrat.

Passage of the bill would kill the gray market in automobiles.

Rinaldo said the bill has widespread, bipartisan support in both the House and Senate.

Rinaldo's bill would amend the National Traffic and Motor Vehicle Safety Act of 1966 by changing the term "manufacturer" to "original manufacturer" so that only the original manufacturer, or those with written authorization from the original manufacturer, could be considered manufacturers for purposes of the safety act.

The bill would also make it unlawful to import a noncertified vehicle into the U.S and would eliminate the importation of nonconforming vehicles into the U.S. under bond pending modification.

Exceptions to this last restriction would include the importation of nonconforming vehicles for test, research, investigatory purposes, training, competitive racing or national security reasons. Other exemptions would be allowed "for very limted situations necesssary to meet unforeseen cases of extreme hardship."

Also, the importation of incomplete motor vehicles would be allowed "only if such vehicles or equipment are accompanied by a statement issued by the original manufacturer indicating the extent to which the incomplete vehicle complies with the applicable safety standards."

Finally, the bill would make it illegal for modifiers to "issue their own certificates of compliance as an alleged distributor to a dealer."

Although EPA has been engaged in a rulemaking on the gray market for some time and a final rule had been promised late last year or early this year, EPA officials now say a final rule may not be promulgated until this summer.

MVMA names Carlson to Washington post

DETROIT.—Anne E. Carlson has been named manager, federal liason, for MVMA.

Carlson, who will be based in MVMA's Washington office, will monitor and report on legislative issues and proposed federal actions affecting the motor vehicle industry.

AMC recalls 185,000 cars

SOUTHFIELD, Mich.—American Motors is recalling about 185,000 1983, 1984 and early 1985 Alliance and Encore models equipped with manual steering because manual steering gears in some of those vehicles may be damaged by heavy road salt use.

If not corrected, this condition could cause a loss of steering control, AMC said.

AMC said it had received reports of five accidents, but no injuries as a result of this condition.

McCluskeys sign

CINCINNATI.—Daniel E. McCluskey, chief executive officer of McCluskey Chevrolet, Inc., and Keith P. McCluskey, dealer-operator, have signed a Chevrolet agreement.

Makers build 769,905 cars

January output highest since 1979

By Louise Kertesz
Detroit Reporter

Auto production in January was the highest for that month in six years.

January output of 769,905 cars was up 14.79 percent from the year-ago month's 670,687 and was the best January output since the 786,839 units built in the first month of 1979.

Last week's scheduled production of 176,035 cars, 7.32 percent better than the year-ago week's 164,022, continued at the same pace (up 0.95 percent) as the previous week when 174,381 units were assembled.

So far this year, 983,773 cars have been completed, 3.94 percent more than the 946,490 finished last year at this time.

Makers shared last week's scheduled production as follows: General Motors, 59.77 percent; Ford Motor Co., 20.76 percent; Chrysler Corp., 13.89 percent; American Motors, 2.27 percent; American Honda, 2.06 percent; Volkswagen of America, 1.14 percent, and New United Motor Mfg., Inc., 0.11 percent.

GM's Buick B-line went down Friday (Feb. 8), ending production of rear-wheel-drive cars in Flint (the G-line went down Feb. 4). A total of 3,000 employes were laid off.

Flint's new Buick City facility is scheduled to begin production of 1986-model front-wheel-drive cars late this summer.

Effective today (Feb. 11), AMC is suspending production of Alliance and Encore at Kenosha for two weeks for inventory adjustment.

GM scheduled two overtime shifts Saturday (Feb. 9) at the following plants: Lansing (Oldsmobile No. 1), Detroit; Pontiac (G-line), Doraville (Ga.), Framingham (Mass.), Janesville (Wis.), Leeds (Mo.), Linden (N.J.) and Lordstown (O).

One overtime shift was scheduled Saturday at GM's plant in Wentzville, Mo.

Honda also scheduled 10 hours of overtime Saturday.

Ford scheduled daily overtime last week at all its plants except Atlanta. Daily overtime is scheduled this week at all Ford plants except Wayne, Mich.

Reno, Harrah Foundation plan automobile museum

RENO.—The City of Reno and the William F. Harrah Automobile Foundation have announced a plan which will permit the immediate acquisition of land in downtown Reno for an automobile museum, Ben Dasher, chairman of the foundation trustees, said.

John and Tony Harrah, sons of the late William Harrah, will assume liability for a $5 million loan to the foundation. In addition, local developer Don Wilkerson and retired Valley Bank president Bob Sullivan have pledged $1 million each to underwrite the loan.

"Our target is $9 million," said Dasher. "This will allow us to obtain a loan from First Interstate Bank to immediately begin purchase of the parcel of land chosen for the museum site."

Dasher also said that the Reno City Council has agreed to assume whatever remains of the loan after four years.

The proposed museum was designed by Anshen and Allen Architects. The 192,000-square-foot facility will exhibit 300 cars on two levels.

The new museum will also house a restaurant/bar, gift shop, special events center, administrative area, automotive library and restoration/preparation area.

It is expected that the William F. Harrah Automobile Foundation's collection will attract 800,000 to 1,000,000 visitors each year in its new location. Although the facility will exhibit only 300 cars, additional cars will be warehoused elsewhere and will be rotated in the exhibit.

Pa. tax would exempt autos with U.S. steel

HARRISBURG, Pa.—Legislation has been introduced in the Pennsylvania House of Representatives to exempt automobiles made with domestically produced steel from the state's 6-percent sales tax.

The measure provides that the tax would not be applied to the sale or use of automobiles manufactured in the U.S. or Canada which contian, exclusively, domestically produced steel in the body, frame and engine. The measure was referred to the House Finance Committee.

Truck production for January is best in 6 years

Domestic truck makers posted their best January output in six years.

January production of 290,492 trucks was 12.74 percent higher than the year-ago month's 257,655 and the best since 1979's 336,734 for the month.

Makers targeted 68,338 units for assembly last week, slipping 2.54 percent from the previous week's 70,120.

The prior week's total, which is the weekly high for this year, was just 46 units short of the best week's production reached in 1984 (70,166 trucks were built during the week ended Nov. 10).

Last week's scheduled production was 8.02 percent better than the year-ago week's 63,267.

So far this year, 364,244 trucks have been assembled, up 3.98 percent from the 350,286 completed last year at this time.

Nissan Motor Mfg. Corp., U.S.A., reported that its January production was a record build for the month, topping the previous high for the month by 11 trucks.

Ford Motor Co. scheduled daily overtime at all its plants last week and this week except Twin Cities.

General Motors scheduled two overtime shifts Saturday (Feb. 9) at its plants in Pontiac (Nos. 5 and 6) and Janesville, Wis.

Canadian output of trucks sets January record

With Canadian truck makers posting their best January ever and a weekly build higher than any week's output last year, car and truck production in Canada both passed the 100,000 mark last week.

January's build of 78,546 trucks was up 18.40 percent over last year's 66,340 and was the highest output ever for January.

Last week's scheduled production of 18,713 trucks slipped 1.71 percent from the previous week's 19,038.

The prior week's total was this year's highest weekly production and was 185 units more than the highest production week of 1984 (18,853 trucks were built during the week ended June 6).

Last week's scheduled truck production was 8.76 percent more than the year-ago week's 17,205.

Year-to-date, 102,490 trucks have been assembled, 10.54 percent ahead of the 92,717 completed last year at this point.

Makers scheduled assembly of 19,146 cars, down 5.93 percent from the previous week's 20,353, and 14.31 percent less than the year-ago week's 22,344.

January car production of 84,871 was down 6.15 percent from the year-ago total of 90,437.

So far this year, 111,482 cars have been assembled, 9.19 percent behind the 122,769 completed last year at this point.

Chrysler's Windsor (Ont.) plant scheduled assembly of 2,580 Plymouth Voyagers, 2,742 Dodge Caravans and 594 Mini Ram Vans, bringing the T-115 total for the year to 33,407.

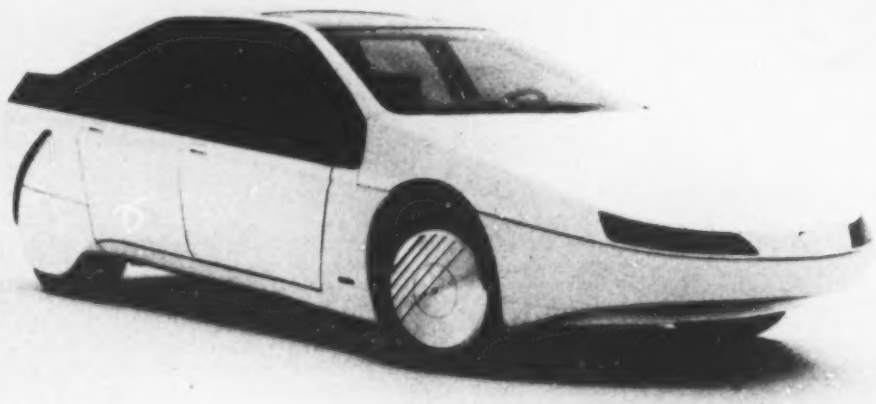
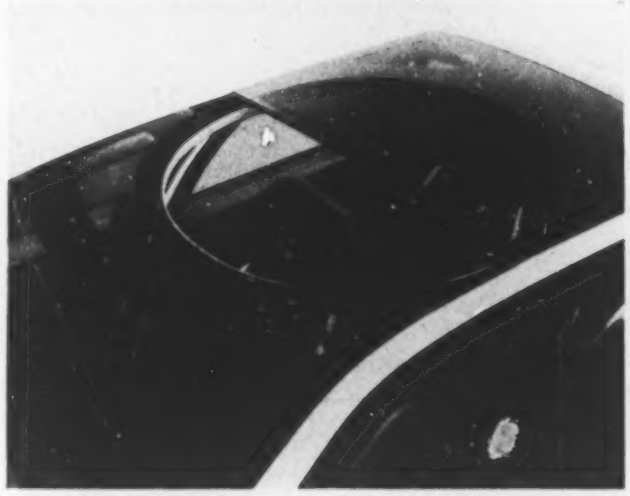
ASC's Vision



Glass all around

ASC, Inc., Southgate, Mich., will show the Vision, its study in aerodynamics and contemporary styling, at next week's SAE Exposition in Detroit. Use of flush-mounted glass all around gives the vehicle a strikingly futuristic look. A circular sunroof which rotates to open is incorporated in the roof. Story, other pictures on Page 8.



Inventories rise as makers gear for sales drive

By Kathleen Hamilton
Assistant Managing Editor

The days' supply of domestic cars in factory and dealer inventories on Feb. 1 rose to a 22-month high of 65 days, but a look behind those figures shows an industry that is gearing up for a sales push rather than unwillingly piling up unsold cars.

The actual number of new domestic cars in stock rose to 1,565,456, the highest level since April 1, 1984. The month-earlier stockpile was 1,417,164, good for 63 days. On Feb. 1 one year ago, the totals were 1,477,399 and 63 days.

Almost without exception, the high days-supply levels for individual car lines this month reflect production increases that hint of makers' expectations of increased sales. Most of those lines actually increased their sales rates last month. Most prominent examples: Gran Fury, LeBaron, Daytona and Lancer at Chrysler Corp.; Mercury Lynx and Pontiac Fiero.

Ford Motor dealers are piling up EXP, Crown Victoria and Grand Marquis on purpose in expectation of lengthy downtimes while the models and, for the big cars, the plants, are changed. Marquis' high stockpile is despite steady sales.

AMC's sales rate fell slightly during the month, although Alliance sales increased. It is continuing its promotional efforts.

• Honda set a record: Absolutely zero domestic Accords were in stock on Feb. 1.

Volkswagen's Golf sales picked up by more than half, trimming its stockpile to a healthy 55 days' worth.

Shortages continued to plague Oldsmobile, and Chevrolet's shortages in two of its most popular lines also no doubt cut into its sales.

Inventories were split this way by maker: GM, 46.70 percent; Ford, 31.40 percent; Chrysler, 17.75 percent; AMC, 3.35 percent; VW, 0.80 percent, and Honda, 0.

One month earlier the split was: GM, 45.44 percent; Ford, 31.08 percent; Chrysler, 18.72 percent; AMC, 3.85 percent; VW, 0.76 percent, and Honda, 0.15 percent.

The Feb. 1 split by market class: Subcompact, 20.52 percent; compact, 23.32 percent; intermediate, 28.99 percent; standard, 17.59 percent; luxury, 9.58 percent. One month earlier the split was: Subcompact, 22.06 percent; compact, 23.65 percent; intermediate, 27.97 percent; standard, 17.21 percent; luxury, 9.11 percent.

The days' supplies of subcompacts on Feb. 1: Domestic Accords, 0; Chevette, 42; Golf, 55; Pontiac 1000, 57; Escort, 74; Omni, 77; Horizon, 80; Charger,

breaking news

Chrysler to build Ramcharger in Mexico

LOS ANGELES.—Chrysler Vice Chairman Ben Bidwell told a news conference here the Ramcharger sport utility vehicle will be built in Mexico early in 1986 for export to the U.S. Ramcharger currently is built in Warren, Mich.

Olds aim: 1,250,000

DETROIT.—Oldsmobile's target for the 1985 model year is 1,250,000 sales, said William W. Lane, new general manager. It would be Oldsmobile's third straight record and a 14-percent increase over the 1984 model year. He said Oldsmobile is "very interested" in a two-seater sports car, but there is "no approved program as yet." An imported car "is not in our plans now." The four-door GM20 car due next fall will be called Calais, just as the current two-door is.

Biggest gain in 24 years

Service volume climbs for 1984

By Francis J. Gawronski
Service Editor

Last year was the best in the last 24 years in the service and parts departments of franchised new-car dealerships, according to Automotive News Service Index.

Despite a dip in shop volume in two of the 12 months, service and parts business for 1984 amounted to 113.5 percent of that recorded for all of 1983. It was the highest yearly gain the 24-year existence of the Service Index.

The previous highs occurred in 1978, when shop volume was 112.0 percent, and in 1976, when it jumped to 110.0 percent of the year earlier-figure.

The year ended on the downside with December parts and service business amounting to 99.7 percent of the volume recorded in the same month in 1983. September also showed a decline, recording 98.3 percent of the volume for the year-earlier month.

Service Index figures are compiled from monthly reports from dealers in all sections of the country.

All five indicators used in the Service Index registered healthy gains for 1984.

The leading gainer for the year was shop parts sales, those used on customer paid and warrranty, up 19.2 percent

Gross profit on all labor parts and accessory sales—the most important indicator from the dealer's viewpoint—was up 15.2 percent, while labor sales (customer-paid and warranty) were up 15.0 percent.

Sales of all parts and accessories jumped 14.3 percent over the previous 12-month period, while repair orders written climbed 6.1 percent in 1984.

For December, gross profit was up 3.3 percent over the year-earlier December volume, while total labor sales were up 2.6 percent, and shop parts sales climbed 1.0 percent.

Two indicators registered declines for the final month of 1984. Repair orders written dipped 4.9 percent, while sales of all parts and accessories were down 3.5 percent.

SERVICE INDEX
99.7 ★

	Dec., '84 vs. Dec., '83	12 mos., '84 vs. 12 mos., '83
Gross Profit on All Labor and P&A Sales	+ 3.3%	+15.2%
Repair Orders Written	− 4.9%	+ 6.1%
Total Labor Sales (Customer & Warranty)	+ 2.6%	+15.0%
Shop Parts Sales (Customer & Warranty)	+ 1.0%	+19.2%
Sales of All Parts and P&A	− 3.5%	+14.3%

★—Survey by Automotive News shows that dealer's service and parts business in December, 1934, was 99.7 percent of business in December, 1983. Service business in the 12 months of 1984 was 113.5 percent of business in the corresponding period in 1983.

ITC finds employment gains and higher prices

Reviewing VRA pluses, minuses

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The voluntary restraint agreement on Japanese auto exports to the U.S. is a double-edged sword that bolstered American auto-industry employment, yet cost consumers an estimated $15.7 billion over the past four years, according to an International Trade Commission report to the House Ways and Means trade subcommittee.

The trade subcommittee requested the VRA report, which is based on the ITC's wider investigation into the internationalization of the auto industry, as fuel for upcoming VRA hearings slated by Congress. The broader ITC report is due in April or May.

According to the ITC's analysis of the VRA, if the agreement "had not been in place during the past three years, it is most likely that sales of imported passenger cars from Japan would have reached higher levels and domestic sales and output would have been somewhat lower."

The ITC estimated Japanese sales of an additional 1.8 million units over the four-year period of the VRA. The commission said Japanese sales would not have increased substantially during the U.S. recession in 1981 and 1982, but that sales would have experi-

Chevrolet, Ford launch programs, too

Allout sales campaign launched by Chrysler

By Joseph Bohn
Marketing Editor

Chrysler Corp. kicked off a big sales drive last week, including special discount certificates, low-interest financing and other incentives, backed by a large ad program.

The effort is geared to sustaining its sales momentum and boosting its retail deliveries in the months ahead.

Meanwhile, Chevrolet and Ford Division launched major trip incentives and are expected to add additional programs.

"It's getting harder and harder to sell Omni/Horizon and other small cars at high prices," said Maryann Keller, auto analyst with Vilas-Fisher Associates. "I see competition (in the industry) heating up."

One of Chrysler's programs is a "Thank you, America" direct mailing of 4.4 million certificates to consumers and employes, good for $500 off on the purchase or lease of any 1985 North American-built Chrysler car or truck.

Chrysler Chairman Lee Iaccoca differentiated them from rebates by saying that rebates were something offered to everyone, while these certificates go only to selected Chrysler owners and employes.

Certificates were mailed Feb. 15. The program runs from Feb. 11 to June 6, and owners of 1979 to 1984 Chrysler vehicles are targets of the direct-mail effort. Certificates are non-transferrable.

Vehicles are sold-order protected through April 30. So, if someone orders a vehicle by that date and does not take delivery by June 6, he or she will still get the discount.

Chrysler also launched an 8.8 percent APR finance program on 1984-85 Omni/Horizon, Turismo/Charger and Laser/Daytona models from Feb. 14 to April 30. Finanace contracts can run 12 to 60 months maximum and must be financed through Chrysler Financial Corp.

In another program, called "Great American Truck Value," Chrysler is giving dealers price reductions on Ramchargers and pickup trucks.

This program is actually a kind of rebate, since customers can receive the money or assign it to dealers. Chrysler is advertising it as a price reduction, however, and there are no rebate certficates involved. Customers fill out a form for the money.

This program runs from Feb. 14 to April 30. The amounts are $300 on the Ramcharger and the two- and four-wheel-drive D/W 100 and 150 Series trucks and $500 on 2WD and 4WD D/W 250 and 350 models.

The company is also giving away free automatic transmissions on 1984-85 Aries/Reliant K-cars. Participating dealers will be reimbursed the $359.98 cost of the transmissions. However, dealers have to pay the factory $50 for every automatic transmission K-car they sell during the Feb. 14 to April 30 time frame of the program.

Finally, the company is sponsoring trip contests which run from Feb. 11 to May 20. The Chrysler-Plymouth contest is called "Above and beyond;" the Dodge contest, "Only the Best." The contests cover all 1984-85 cars and trucks, including imports. There is double credit on Chrysler LeBaron GTS and Dodge Lancer.

Dealers compete in open and grouped competition. There are three levels of competition, depending on dealership size. The bottom two levels have a step-up option to a higher level.

There is a fast-start provision. Dealers who hit 55 percent of their objective in the first 50 days get trip extensions in Flights I and II and $500 cash in Flight III. The Flight III dealers in each of the company's 24 zones who hit 100 percent of their objectives but don't win trips will be eligible for a trip, based on drawings.

There are a great many trip

Dodge deal donates to famine relief fund

CERRITOS, Calif.—In conjunction with the Greater Long Beach Chapter of the American Red Cross, Cerritos Dodge is donating $100 to the African Famine Relief Fund for every car or truck sold or leased.

Owners of the dealership are Dick Browning, Kent Browning and Steve Goldman.

Subaru gets slippery

The financial community got an early look at the Subaru XT Coupe-GL-10 Turbo Traction when—well before its press preview—it was featured in a slick five-color photo on the cover of Subaru of America, Inc.'s, annual report. With a drag coefficient of 0.29, it's the most aerodynamic production car in the world, its U.S. marketer says. Wedge-shaped XT Coupes will be offered with front drive or on-demand 4WD. Image builders will be available in mid-March.

High-level rumor says engines will come first, then autos

Honda to build plant in Britain?

By Richard Feast
European Editor

LONDON.—Government ministers here are confident that Honda will follow Nissan to become a full-scale auto maker in Britain.

There has been no official confirmation, but the strong rumor in government circles is that Honda will start with an engine manufacturing plant and follow with complete auto production.

What is known is that Honda has acquired a 330-acre greenfield site at Swindon, some 75 miles west of London. Ostensibly, this is for a test and preparation center for its imports and the HX (Acura) models to be built in Britain under the terms of the joint agreement with BL's Austin Rover Group.

Honda President Tadashi Kume is expected in the U.K. next month for discussions with officials of ARG and the Department of Trade and Industry.

In the absence of any confirmation, Honda's plans are open to considerable speculation. What is certain is that the site selected is too large simply to be a pre-delivery inspection area.

The ARG connection may hold the clue. ARG is to build both Honda and Austin Rover versions of the forthcoming luxury sedan. They will be sold in competition with each other in the respective companies' European dealer networks.

In the U.S. market, Honda will source from Japan, while ARG will use U.K.-built models for its return.

Production start-up has been delayed—by development of the Honda engine—and is now put at the first quarter of next year.

These developments will turn Honda into a European producer, even if the cars are made by ARG. But it will not give Honda a full product lineup. Its smaller models will have to be imported from Japan, and that still means restrictions in Italy, France and the U.S.—three of Europe's four main national markets.

Honda may use Swindon to manufacture a complementary line to the joint XX/HX Austin Rover.

It could also be used solely for engine manufacture. Just which company will supply European-built XX/HX models with engines and gearboxes has never been spelled out.

Two factors point toward Honda. First is the Japanese company's established expertise in the area. The second is ARG's lack of cash to design, develop and build a new generation of gasoline power units. Its current small engines are developments of some basically very old designs.

Becoming an engine and gearbox supplier to the whole of ARG would further cement the ties between the two companies. It would turn Honda into a member of the European club, and at the same time take the financial burden off ARG.

There are no financial links between Honda and ARG, nor any separate joint companies. ARG has built the Honda Ballade under license (as the Triumph Acclaim) and is now making the Honda Civic sedan as a Rover.

Nissan is building a small assembly factory at Sunderland, in the north of England, which will begin outuput next year. But the company is expected to develop the 800-acre site into a full production unit of up to 200,000 annually over time.

Talk of building more capacity in Europe will disturb the volume car makers like Ford, General Motors, Fiat, Volkswagen, Peugeot and Renault, which already reckon installed capacity exceeds demand by as much as 2.5 million units.

Honda has traditionally been more prepared than its rivals to take production out of Japan and into the rest of the world. It did so with motorcycles, and has more recently moved into the U.S. in a substantial way.

It is a very export-oriented company, which means it is more susceptible to trade measures taken against Japanese products. Last year it exported 65 percent of its 989,000 production, compared with 53 percent for Japanese auto makers as a whole.

Early-month car sales trail year-earlier rate

By Jenny L. King
Detroit Reporter

Judging from the results of the first four sales periods of this year, 1984 is proving a tough act to follow for the U.S. auto makers.

The early February total this year was down more than 16,000 units from the sum posted in 1984 making it 9.07 percent off although on a daily-rate basis it was up 2.30 percent.

The year-to-date figure of 793,258 was up 3.68 percent from 765,129. On a straight comparison, excluding daily-rate, there have been two 10-day periods ahead and two behind 1984. A year ago, the first four periods all were up and the gains ranged from 25.99 to 64.26 percent over 1983 sales levels.

Domestic sales this Feb. 1-10 totaled 165,221, down 9.07 percent from 181,694 in 1984. With eight days in the period this year, the daily rate averaged 20,653, up 2.30 percent from 20,188 figured on nine days a year earlier.

Chrysler Corp. and Honda were winners any way totals are compared. Chrysler was up 5.30 percent (or 18.50 percent daily rate), to 23,980 from 22,772. Honda was up 75.06 percent, to 4,331 from 2,474 (up 96.73 percent daily rate).

General Motors was off 6.32 percent, to 93,077 from 99,353. That was an increase of 5.40 percent on a daily-rate basis. Ford Motor Co. reported sales of 40,413, down 21.02 percent from 51,166 last year (down 11.13 percent daily rate).

American Motors was off 45.22 percent, to 2,520 from 4,600 (down 38.38 percent daily rate), and Volkswagen dropped 32.28 percent, to 900 from 1,329 (down 23.65 percent daily rate).

The slicing of the market pie produced a 56.34-percent piece for GM, up from 54.68 percent a year earlier. Ford slipped to 24.46 percent from 28.16 percent. Chrysler climbed to 14.51 percent from 12.53 percent. Honda claimed 2.62 percent, up from 1.36 percent. AMC was down to 1.53 percent from 2.53 percent, and VW held the remaining 0.54 percent, down from 0.74 percent.

Sales were up this year for six makes, with the remaining nine on the down side. Plymouth was up 23.23 percent, Dodge was up 17.29 percent, Lincoln was up 33.58 percent, Buick was up 0.25 percent, Chevrolet was up 4.44 percent and Honda was up 75.06 percent.

Chrysler was off 23.98 percent, Ford was down 21.30 percent, Mercury was down 32.64 percent and Cadillac was down 21.14 percent. Oldsmobile was down 18.51 percent, Pontiac missed by 1.92 percent, AMC was down 54.29 percent, Renault was down 43.59 percent and VW was down 32.28 percent.

DOMESTIC SALES

	Feb. 1 -10, 1985	Feb. 1 -10, 1984

Buick to keep Skylark name

FLINT.—Buick will name its four-door version of the Somerset Regal "Skylark," insuring the continuity of the nameplate used on the X-cars and a number of other Buick lines in the past. There will be no X-car for 1986.

The new Skylark will be launched as a 1986 model. It is based on the N-body (GM20) platform currently sold as a two-door by Buick, Oldsmobile and Pontiac. The new Skylark and the Somerset Regal are positioned between the Skyhawk and Century lines, Buick said.

The Skylark name dates back to 1953, when it was attached to a limited-edition full-size Buick convertible.

'84 earnings reach $2.91 billion

Ford tops old record by a billion

Ford Motor Co. reported a record profit of $2.91 billion for 1984, beating by more than a billion dollars its previous record net income of $1.90 billion, established just a year earlier in 1983.

Ford said the improvement reflected higher industry sales in the U.S. and Canada, higher market shares in the U.S. and Europe and worldwide cost reductions.

Worldwide dollar sales were a record $52.37 billion in 1984, up 18 percent over the previous peak of $44.45 billion reported for 1983.

For the fourth quarter, Ford reported net income of $721 million, 8 percent lower than the record profit of $781 million reported in the fourth quarter a year earlier. A strike in Europe was blamed for the profit decline. Fourth-quarter sales amounted to $13.4 billion worldwide, up 8 percent over $12.4 billion in 1983.

Factory sales numbered 5,667,000 cars, trucks and tractors for the full year, up 13 percent. For the fourth quarter, unit sales were 1,438,000, up 6 percent.

Chairman Donald E. Petersen and President Harold A. Poling said Ford's increase in its U.S. car share rose to 19.2 percent in 1984 from 17.2 percent in 1983. Its increase was the largest of any company's, they said. In Europe, they said, Ford was the car sales leader for the first time in history, achieving a record market share for the fourth year in a row.

In reporting profits, Petersen and Poling cautioned that "one or two good profit years don't necessarily repair a balance sheet that was badly hurt in the early 1980s."

They noted that in the U.S., Ford still has a cumulative loss of $1 billion after taxes since 1979. During that same period, they said, Ford spent more than $16 billion in capital expenditures and research and development in the U.S. to improve quality, introduce new products and increase productivity.

"As a result," they said, "Ford's financial condition remains substantially diminished from historical levels. Debt is 66 percent higher than at mid-1979 and equity is nearly $750 million less.

"Continued profitability is mandatory if Ford is to recoup its massive investment in the U.S. auto industry and, most importantly, be in position to continue making the investments required to remain competitive."

Chrysler's record earnings triple previous peak net

By Dan McCosh
Detroit Reporter

Chrysler Corp.'s record $2.4 billion net earnings in 1984, an alltime record for the company, will be difficult to match in 1985, said Chrysler Chairman Lee A. Iacocca, if only because the company expects to be paying corporate income taxes for the full year.

Chrysler's 1984 profit was more than three times the $701 million earned in 1983, the former record. Sales for 1984 were a record $19.6 billion, up 47 percent from the former peak of $13.3 billion in 1983.

The company also set a record of earnings per common share of $18.88 last year.

Fourth quarter earnings of $609.7 million, on sales of $5.3 billion, also set a record. They compared with earnings of $118.3 million on sales of $3.8 billion in 1983. The quarterly profit in 1983 was reduced by a one-time $224 million writedown of Chrysler's investment in Peugeot, S.A.

Iacocca also announced the company had completed additional moves to reduce its debt, resulting in a debt/equity ratio of 0.4:1. Chrysler last year retired $76.8 million of 12 percent subordinated debentures sold to dealers and suppliers.

The company also repurchased the last outstanding warrants on Chrysler stock: 2.6 million warrants for $58 million. It acquired 2.4 million shares of its common stock at a cost of $64.5 million.

Iacocca also repeated an earlier announcement that the company plans to spend $10.5 billion over the next five years, including $2.8 billion in 1985. But he added that the plans are contingent on negotiations with the Japanese on import restraints.

"We know what's going to be done, but we don't know where," Iacocca said.

The company has allocated $135 million for executive bonuses for 1984.

Iacocca also announced a distribution of $500 per worker, totalling about $50 million, in recognition of the contribution made by employes during the company's bad days.

Total earnings during the past nine quarters (including the first quarter of 1985, to date) have surpassed the $3.283 billion total lost during the company's struggle for solvency, Iacocca noted.

GM dual for Weston

GRESHAM, Ore. — Jim Weston has signed franchises for Jim Weston Pontiac-Buick-GMC here.

Big Three set profit record of $9.8 billion

DETROIT.—The Big Three auto makers piled up alltime record profits of $9.8 billion last year, topping their previous high of $6.3 billion in 1983.

Each of the companies set a record in 1984. General Motors accounted for $4.5 billion of the year's total. Ford Motor Co. showed a profit of $2.9 billion, and Chrysler Corp. had net income of $2.4 billion.

Big Three profits
(In millions)

	1984	1983
General Motors	$4,517	$3,730
Ford Motor Co.	2,907	1,867
Chrysler Corp.	2,380	701
TOTALS	$9,804	$6,298

DETROIT.—Chrysler Corp. will pay its 100,000 UAW and white collar workers in the U.S. and Canada $500 bonuses for their part in Chrysler's $2.4 billion profit in 1984.

"We have Valentine's Day presents for everybody," Chrysler Chairman Lee A. Iacocca said when announcing the corporations profits on Feb. 14.

But, he said the $500 bonus, which will cost Chrysler about $50 million, will not set a precedent and "is a voluntary contribution to our workers." The $500 does not include tax deductions.

The Canadian workers will be paid in Canadian currency.

Some observers said the $500 bonus was issued conveniently since the contract between Chrysler and the UAW expires Oct. 15.

The workers will also be eligible for a $500 discount on new Chrysler products if they order by April 30 or purchase from a dealer by June 6.

But, Chrysler's rebound and high profits could have meant much more than $500 to the UAW-represented Chrysler workers. They gave up a lucrative profit sharing formula in 1982 in exchange for upfront wage increases. Had they stayed with the profit sharing, the check for 1984 would have topped $5,000, sources said.

Those eligible for the profit sharing are below the incentive compensation level. About 1,460 employes at that level will be dividing up about $135 million.

General Motors recently announced its proft sharing payout which averaged $515 (excluding taxes) for each UAW worker, compared with $606 in 1983. GM made $4.5 billion in 1984.

During contract talks last summer GM had indicated profit sharing could be about $1,000 if the company continued as it was then.

But, according to GM, the strikes in the U.S., Canada and Europe, which affected U.S. production, accounted for most of the drop in profit sharing.

GM workers are also eligible for a $129 discount on new GM vehicles which can only be used if the worker is willing to put his profit sharing check towards the purchase of the car as well.

Ford has not yet released its profit sharing figures but sources said it will likely average $1,500 to $1,600 per worker. Ford plans to announce its profit sharing figures March 13. It made $2.9 billion last year.

The $500 Chrysler bonus was announced jointly in a press release by Iacocca and UAW President Owen Bieber.

According to a prepared statement, the bonus came out of discussions Bieber had as a member of the Chrysler Board of Directors and is in connection with a marketing program which gives every customer who bought a new Chrysler vehicle from 1979 to 1984 a $500 certificate towards the purchase of a new Chrysler car or truck.

Rolling greehouse

The Vision's greenhouse extends from the windshield to the rear in a single expanse of glass. The circular sunroof rotates electrically to an open or closed position.

ASC's futuristic Vision has sunroof that rotates

SOUTHGATE, Mich.—ASC, Inc., will unveil the Vision, a show car study in aerodynamics and contemporary styling, at next week's SAE Exposition in Detroit.

The four-passenger Vision has a futuristic look, enhanced by the use of flush-mounted glass all around. The vehicle's greenhouse extends from the front windshield to the rear in a single expanse of glass. Incorporated in the all-glass roof is a circular sunroof which rotates electrically to an open or closed position.

The Vision's sleek body is complemented by flexible urethane rear wheel skirts, flush-mounted headlights and aero wheel covers. The car is also equipped with an electrically controlled rear decklid spoiler that adjusts to varying driving requirements. The Vision also has a lower rear spoiler.

The vehicle is powered by a high-performance 2.2-liter turbocharged engine coupled to a three-speed automatic transmission. It has a wheelbase of 100 inches and an overall length of 170 inches. It is 48 inches high.

The pearlescent white Vision has white leather bucket seats accented with woven cloth insets. It is equipped with electronic digital instrumentation and an on-board computer.

The car's keyless entry replaces conventional door locks with a remote key-chain-mounted control unit. The driver pushes a button as he approaches the car and the doors unlock. The fuel filler cap is concealed behind the rear license plate, which moves aside electrically for easy access to the cap during refueling.

Perot explains his plans for first Saturn

DETROIT.—Ross Perot has special plans for the first General Motors Saturn car, and he says he's already ordered it.

He plans to buy the car and then see that it is raffled off to a member of the original Saturn team.

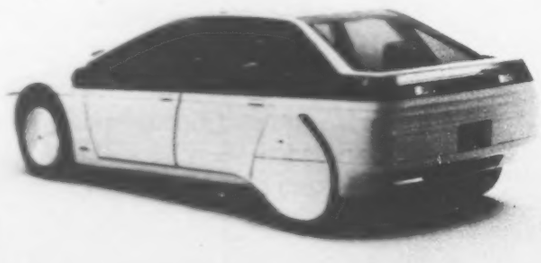
Perot, who is chairman of Electronic Data Systems, GM's new computer services subsidiary, told those attending a Saturn dinner that he believes the first car should turned over to the UAW and the original Saturn group.

He plans to purchase the car and give it to Joe Molotke, UAW co-chairman of the Saturn team, who would then raffle it off to the original Saturn people.

The car would include a plaque with the signatures of the original Saturn team members, Perot said.

Perot's move was prompted by a comment by GM Chairman Roger Smith. Smith told the dinner guests he plans to drive the first Saturn off the line while Donald Ephlin, UAW vice president and director of the GM department, rides in the passenger seat.

"Where the hell am I?" Perot asked. — MARJORIE SORGE



Attention to aerodynamics

Details of ASC's Vision show car were designed with attention to aerodynamics. The vehicle's body contours are complemented by flexible urethane rear wheel skirts and aero wheel covers. The rear decklid spoiler adjusts to driving requirements.

Mack's 'unconventional conventional'

Super-Liner II, Mack's "unconventional conventional," combines the new Ultra-Liner chassis with the long-nose front end and conventional cab which now is fully galvanized for greater protection against rust and corrosion.

New Mack long-nose called 'blend of best'

ALLENTOWN, Pa.—Mack Trucks, Inc., has introduced the Super-Liner II, a second-generation long-nose conventional with a new chassis, upgraded cab and improvements in performance, comfort and convenience features.

Full production is scheduled to begin late this month or early March for the new model, which is offered in two configurations—the RW600 Series for highway-tractor operations and the RW700 Series for construction and heavy-duty low-boy applications.

The Super-Liner II, a Mack spokesman said, is aimed at "the increasingly popular premium conventional market segment, with an entry blending top features of the Ultra-Liner cabover and Super-Liner conventional.

"This 'blending of the best' concept," he added, "has enabled Mack to eliminate 30 percent of the predecessor's parts for greater standardization and efficiency."

The Super-Liner II chassis is the same as that of the Ultra-Liner cabover introduced in 1983, and the new model also shares many of the Ultra-Liner's design features.

The Mack spokesman noted that the new deep-center section provides greatly improved riding comfort, with lighter-weight characteristics than straight-through frame rails.

Frame reinforcement is available on both the RW600 and RW700 models according to application and capacity, he added, with aluminum frame rails optional on the RW600 Series.

"Chassis components contribute further to the Super-Liner II model's accent on comfort," the spokesman said.

"The steering gear is now frame-mounted to minimize road shock, and taper-leaf front suspension is standard on front axles, with both Mack and Rockwell versions available," he added. "Mack, Rockwell and Eaton rear axles also are offered."

The new conventional features Mack Econodyne six-cylinder and V-8 diesel engines, including a new 500-HP V-8 with a four-valve cylinder head for greater fuel efficiency and performance. The engines are mated to the Mack T-200 Series transmissions.

Drivetrain components from other major industry suppliers also are available, the Mack spokesman said.

The Super-Liner II features

300 exhibitors seen for bigger Louisville show

LOUISVILLE.—About 300 exhibitors are expected to participate in the 14th annual Mid-America Trucking Show Feb. 28—March 2 at the Kentucky Fair & Exposition Center here, according to Paul Young of Exhibit Management Associates, Inc., the promoters.

Among the exhibitors will be nine truck manufacturers, major engine manufacturers, six trailer builders and many representatives of truck component and service suppliers, he said.

"We'll be about 30 to 40 percent bigger than last year," he added, and he estimated that attendance will increase to 30,000, up from 22,000 last year.

Significant gains reported for three major market segments

January truck sales up 30 pct.

Retail sales of new trucks of all types in the U.S. in January were 30 percent higher than the previous year, with hefty increases in the three major market segments.

During the month, according to preliminary manufacturer and distributor reports, franchised dealers and factory outlets retailed 362,362 vehicles, compared with 278,440 in the first month of 1984.

January sales of light trucks totaled 339,616 units, a gain of 29.3 percent over last year's 262,605. Mediums were up 27.1 percent, from 3,729 a year ago to 4,738. Heavies were 48.8 percent higher, 18,008 versus 12,106.

Compact-truck sales were more than 50 percent greater than a year ago, and accounted for almost half of the month's light-truck sales.

Dealers retailed 166,994 small trucks of all types in January, an increase of 54.5 percent over the year-earlier 108,068. Sales of domestic compacts totaled 108,200 units, representing almost 65 percent on the month's total.

In January, Big Three dealers retailed 269,341 trucks, an increase of 24.1 percent over last year's 217,014. Only GMC reported fewer sales this year than a year ago.

During the month, Chevrolet dealers retailed 99,355 vehicles, up 23.1 percent over last year's 80,683. The total included 2,700 Astro minivans, an increase of 75 percent over the 1,544 sold in December.

Ford dealers sold 96,887 units in January, a gain of 24.4 percent over the year-earlier 77,877.

Sales by Dodge and Chyrsler-Plymouth dealers during the month were up 47.7 percent to 47,113 units, compared with 31,888 the previous year. The minivans—the Dodge Caravan and Mini Ram Van and Plymouth Voyager—ac-

Cherokee 4x2 wagon has $9,195 base price

SOUTHFIELD, Mich.—American Motors has announced a base price of $9,195 for its new two-wheel-drive Jeep Cherokee SportWagon, $1,350 below the 4x4 model.

Joseph E. Cappy, sales and marketing group vice president, said the new model is expected to have its greatest impact in Sun Belt markets where there is less need for four-wheel-drive systems. It will be offered in both two-door and four-door versions.

Trucking firms suing states over use taxes

ATLANTA.—The Private Truck Council of America, Inc., and several trucking companies are going to court to challenge state laws on truck taxes.

The Council, based in Washington, filed a suit in Fulton Superior Court here contending Georgia's law is a "retaliatory" tax and violates interstate commerce sections of the U.S. Constitution.

The organization said suits also are being filed in Nebraska, Oklahoma, New Jersey, New Hampshire and Maine.

The suit filed here contends that the highway-use taxes for trucking companies in certain states vary for each of the states depending on where the trucks are registered.

The suit is asking for a permanent injunction to stop Georgia officials from collecting the tax from out-of-state trucking firms. It also asks refunds, with interest, on fees already collected since the amended law went into effect this year.

"The state by its taxing scheme favors domestic enterprises over enterprises from other states," the suit charges. "Georgia's retaliatory taxes and fees further impose an unlawful burden on interstate commerce because they vary in amount depending on the particular state of vehicle registration."

The suit alleges that "hundreds of interstate motor carriers" are affected by the law.

The association charged that trucks operating in Georgia from 13 particular states pay annual state road-use taxes and fees ranging from $5 to $180, in addition to "trip fees" for each round trip into or through the state.

Trucks registered in some states are allowed to forego the registration fees, but are required to purchase 5-and-10-day temporary permits costing from $10 to $66, the suit noted.

The Georgia law was amended during the last legislature session as an equalizer because Georgia-registered trucks were being levied additional road-use taxes in certain other states, said C.L. Koch, of the State Revenue Department.

Richard Schweitzer, legislative counsel for the trucking organization, said the tax is not serving any revenue need to build any highways.

"It's just what it says; it's retaliatory," he said.

DDA is offering output retarder for transmissions

Detroit Diesel Allison Division is offering output retarders as an option on its Allison MT and HT series automatic transmissions for medium and heavy trucks and buses.

DDA said its retarder can provide up to 80 percent of a vehicle's braking requirements and provide sustained braking at high as well as very low speeds.

The company also said the retarder can extend service-brake life four to seven times and allows a driver to negotiate downgrades at considerably higher speeds, reducing trip times and improving productivity.

The DDA retarder is a two-stage unit featuring both friction clutch and hydraulic retardation. It is mounted at the rear of the transmission and applies braking effort directly to the driveshaft, eliminating associated transmission-component wear and reducing the need to make gear changes to maintain retardation, according to DDA.

The retarder can be applied automatically through the vehicle's service-brake system or with a separate hand lever.

Retarder cooling is provided by the engine/transmission cooling system and a separate high-capacity oil-to-water cooler.

DDA said the optional unit imposes only a slight increase in weight and no length or height penalty on the standard DDA transmission.

ATA asks EPA to develop separate particulate standard instead

HD diesel-trap exemption urged

WASHINGTON.—The American Trucking Assns. has urged EPA to exempt line-haul truck equipment from use of emission trap/oxidizers on heavy-duty diesel engines, and to develop instead a separate particulate standard.

In comments filed with EPA, the trucking group charged that "EPA has not adequately demonstrated that the fundamental problems remaining with trap/oxidizer application. . .can be resolved by 1990 at the emission levels proposed."

EPA has called for more stringent diesel gaseous and particulate emission standards for 1987 and 1990 model-year trucks. A major part of ATA's criticism centers on required use of trap/oxidizers.

The trap devices, ATA contended, would disrupt the expected life and mileage of a vehicle significantly if imposed today, and present potential safety problems.

EPA also erred when it concluded that its proposal would not impact small businesses, ATA charged.

Substantial increases in the initial price of equipment along with increased operating costs will affect both large and small carriers dramatically, the ATA said, particularly the single-vehicle owner/operator.

The proposed standards for heavy diesels, the trucking group continued, will cost the trucking industry an additional $2.2 billion in fuel costs by 1997.

The standards will impose a "fuel-economy penalty" amounting to an estimated $6,000 per truck annually, ATA contended.

ATA took issue with EPA's approach to reducing heavy-diesel emissions, arguing that it makes no sense to establish rules that increase the amount of fuel needed to haul the same amount of freight.

The trucking group expressed considerable concern that the regulations, if enacted, would negate vehicle-productivity advances included in legislation which now allows the use of twin trailers and wider equipment on the nation's interstate highway system.

Also lost would be any future fuel-economy gains, ATA noted.

In its effort to arrive at a proposal, the trucking group charged, EPA has misled Congress by overstating the amount of future emissions and understating dramatically the effect these regulations will have on the trucking industry and the nation.

ATA urged that the agency consider studying costs and benefits of reducing the sulfur content in diesel fuel which could make EPA's "now unrealistic particulate standards possible."

Boston showgoers to see Class 8 Scania

STOCKHOLM, Sweden.—Scania's Class 8 trucks will be exhibited at the New England Truck Show in Boston April 24-26. Afterward, they will be used in a dealer-recruitment campaign prior to going on sale in the fall.

Saab-Scania of America, Inc., initially will market one Scania model, the 112 powered by an 11-liter, six-cylinder diesel engine, in the New England States. The firm said it will distribute its entire line throughout the U.S. within five years.

At House hearing

Ford official, director differ on South Africa

By Geoff Sundstrom
Washington Reporter

WASHINGTON.— William D. Broderick, Ford Motor Co.'s director of international governmental affairs, defended U.S. investment in South Africa before a House Foreign Relations subcommittee as Ford Director Clifton R. Wharton Jr. told the same panel that U.S. business should get out of that country.

Neither man spoke directly on behalf of Ford Motor Co., but their testimony came as Ford announced the merger of its South African company with Amcar Motor Holdings, the automotive subsidiary of South Africa's Anglo American group. Ford said the consolidation move was based wholly on financial considerations.

Broderick testified on behalf of an estimated 135 American companies that have signed the so-called Sullivan Principles, a voluntary corporate code of conduct for business activity in South Africa. The principles promote nondiscrimination in employment and other corporate affairs.

Broderick said his group rejects "the legal and political premises and consequences of apartheid," but that the presence of American businesses in South Africa operating under the Sullivan Principles can make "a greater contribution" to racial reform than would be possible under a policy of disinvestment.

Broderick pointed to U.S. business support of black trade unions, and opposition to the so-called "Orderly Movement of Persons Bill" as evidence of meaningful corporate efforts to encourage change in South Africa.

But Wharton challenged Broderick saying, "Despite the helpful objectives of the Sullivan Principles, there is no evidence that the U.S. presence and practices are making any substantial, permanent progress in breaking down the legally sanctioned and brutally enforced South African policies of apartheid."

Wharton did say, however, that "as a director of Ford Motor Co., one of the larger American firms in South Africa, all the evidence I have seen convinces me that Ford and the other Sullivan Principle firms have performed in good faith and have made a significant difference in the lives of those whom they employ.

"But is this enough to justify their continued presence? My answer is no," he said.

Both Ford and General Motors were criticized in testimony by Dr. Jean Sindab, executive director of the Washington Office on Africa, a leading anti-apartheid organization.

Sindab said Ford and GM vehicles were used by the South African military and police and that "the two companies alone comprise 24 percent of the South African automotive market."

Sindab said, "Ford began its South African operations in 1923. For the 54 years between that time and 1977 when the Sullivan code was implemented, Ford contributed to the growth of the automotive industry in South Africa while simultaneously exploiting cheap black labor.

"Only when the pressure mounted from the black South African trade union movement and the U.S. divestment movement did Ford and the other corporations design and sign on to the principles in 1977."

Sindab also testified that a 1979 strike at a Ford plant in South Africa resulted in the firing of 700 workers.

"Although Ford eventually reinstated the workers after tense negotiations, the South African security police conveniently detained several strike leaders, including Thozamile Botha, who was subsequently banned," Sindab said.

Judge says GM isn't obliged to provide air bag

WASHINGTON.—A Florida judge's decision that auto makers cannot be held liable for failing to protect auto occupants with air bags will be appealed, according to lawyers for the plaintiff.

Judge George C. Carr, of the U.S. District Court for the Middle District of Florida, ruled in a summary judgment that as a matter of public policy, General Motors is not obliged to provide air bags in order to make its cars more crashworthy.

The case involved a 1977 Pontiac Grand Prix which was struck on the left front bumper when another vehicle ran a stop sign. The Grand Prix was "side-slapped" by the other vehicle as it rotated after the impact.

Marcia Evers, the driver of the Grand Prix, suffered a brain injury in the accident, although she was wearing a seat belt.

Judge Carr said he believes air bags are effective but he said his court could not require every auto maker to install passive restraints.

The decision follows an earlier case against Ford Motor Co. that charged, among other things, that Ford was liable for injuries to the plaintiff because it failed to equip its vehicles with air bags. Ford settled the case out of court for $1.8 million but said that the "secondary air-bag allegation played no significant role."

Truck sales in January rise 30 pct. to 362,362

Continued from Page 18

counted for 37 percent of the total with 17,597 sales.

GMC dealers retailed 25,986 vehicles in January, a decline of 2.2 percent from the previous year's 26,566. But sales of the Safari minivan more than doubled the December total, 584 versus 200.

January sales of Jeep four-wheel-drive vehicles were up 21.3 percent to 13,182 units, compared with 10,869 in the same month a year ago. Sales of the downsized Cherokee and Wagoneer totaled 8,471, representing 64.3 percent of the month's count.

Nissan/Datsun dealers retailed a record 30,419 compact trucks during the month, an increase of 134.2 percent over last year's 12,989. The total included 13,553 trucks built in the U.S., which was almost triple the year-earlier 4,864.

January Toyota sales also hit an alltime high of 23,909 units, up 47.3 percent from the previous mark of 16,235 set a year ago.

Mazda dealers retailed 7,124 vehicles during the month, a decline of 16.7 percent from last year's 8,549 units.

Sales of the compact Isuzu trucks hit a record 3,032 units in January, an increase of 79.3 percent from last year's 1,691.

During the month, Mitsubishi dealers retailed 1,731 small trucks, also a new high and a gain of 34.2 percent over the previous year's 1,290.

PLANNING A BIG SALE . . . PLACE YOUR AD IN THIS SECTION

MISSOURI

SPECIAL ANNOUNCEMENT...

Many of our fine Ford-Lincoln & Mercury Dealers have asked for it.

We are extremely pleased to inform our Great Dealer Body that Floyd Hauhe Auto Auction has been appointed to sell Ford's Famous Line of Used Motor Cars thru their nationally known Used Vehicle Resale Program.

Our way of saying a Very Special Thank You and to show our fond appreciation to our Great Dealer body and Ford Motor Company, We have a Great Party Sale planned for you.

THURSDAY FEBRUARY 28th 11:00 A.M.

Featuring a whopping $5,000 Cash Awards Program PLUS, Plenty of Free Food & Refreshments thru-out this Great Ford Motor Company Sale

Four Big $500 Cash Awards at the start of this Great Ford Sale Just sign our Dealer Register — No Purchase necessary; however, you must be a Franchised Ford-Lincoln & Mercury Dealer

Come share this Big $3,000 in additional Cash Awards
The more you participate, the more you improve your opportunity of taking home your share of these Cash Awards

One Award ticket issued with each Ford product purchased. At the completion of this Great Ford Motor Company sale, we will award Four additional Cash Awards:

First Cash Award	$1,000
Second Cash Award	$1,000
Third Cash Award	$ 500
Fourth Cash Award	$ 500

No restrictions — Win as many times as your luck holds out

FOR THIS GREAT FORD MOTOR COMPANY SALE,
We will offer 300 plus units — '84 models, very limited number of '85 models
Outstanding selection of factory fresh Company owned vehicles
Many Ford employee retiree units — They look brand new, consisting of
Designer & Signature Series Lincolns — Mark VII's — Town Cars — Ford LTD's — Ford Tempos — Ford Escorts — T-Birds — Capris — Mercurys — Mercury Marquis — Mercury Lynxs — Mercury Topazs. Exceptional fine selection of Very Low mileage Ford products

Each Unit professionally detailed for retail to Ford Motor Company's strict specifications. Ford Motor Company franchised Dealers only. No cross-line buying on '85 models. Many units carry the remaining portion of the original Factory Warranty

This is absolutely the Greatest Group of Cars to be found anywhere

PLAN NOW TO ATTEND THIS GREAT PARTY SALE

Call your travel agency and firm up your plans
Remember — it all happens here

THURSDAY FEBRUARY 28th 11:00 A.M.

FLOYD HAUHE AUTO AUCTION, INC.

Blue-ribbon panel calls for bureau of trade, science

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Lawmakers and White House officials favoring an overhaul of government trade policy offices recieved a shot in the arm last week in the form of a report by the President's Commission on Industrial Competitiveness.

The report specifically called for the establishment of Cabinet-level departments of trede and of science and technology to aid U.S. competitiveness overseas.

Last year, the President backed a Senate bill that would have reorganized certain trade functions of the Commerce Department and the U.S. Trade Representatives Office, creating a Trade Department. Many saw the proposal as an election-year alternative to bills pushed by House Democrats seeking to create an industrial policy for the U.S. Both approaches failed to win Congressional approval.

In his State of the Union address, President Reagan said proposals for trade policy reorganization were in the offing but he did not give details.

Congress is seen as anxious to act on the trade issue with sentiment building for action to help correct the record $123-billion U.S. trade deficit last year.

The commission's report said present U.S. trade policy is "fragmented" and uncoordinated.

The group also called for deficit reduction, tax reform—especially that which would eliminate wide disparities between the effective tax rates on different industries—and greater encouragement of savings by Americans.

Sheffler signs

KEOKUK, Ia.—Tony Sheffler has signed a Lincoln-Mercury franchise agreement.

Deacon appointed by Porsche in Canada

TORONTO.—Volkswagen Canada, Inc., the importer of Porsche in Canada, has named David Deacon general manager, Porsche.

Deacon formerly was vice president, retail sales, at F.H. Deacon, Hodgson, Inc., a stock brokerage firm. He was Canadian Endurance Racing Champion in 1980, and drove for the BMW factory team at the 24 Hours of LeMans in 1981.

Dedeurwaerder highlights product, labor strategies

AMC preps turbo; Espace in doubt

CHICAGO.—American Motors will introduce a turbocharged engine for the Alliance "very soon," but its plans to bring the Renault Espace minivan into the U.S. apparently have become uncertain.

AMC President Jose Dedeurwaerder told reporters here for the Chicago Auto Show that he didn't know when the minivan would be brought in. Previous plans had been to introduce it in 1986. "I want competitive pricing," he explained.

Dedeurwaerder said Ford Motor Co.'s plans to add part-time four-wheel drive to its Tempos and Topazes (Automotive News, Feb. 11) will not prompt AMC to prolong the life of its 4WD Eagle.

"I never said we were going to produce Eagle for the next 20 years because we have already been producing it for 20 years," he joked. "We intend to stay in that segment" with other 4WD cars—but not a 4WD 18i, he said.

"Ford (Taurus and Sable, which were publicly displayed for the first time at the Chicago show) will look dated compared to what we will build in Canada two years from now," he said.

Dedeurwaerder said AMC's goal for this year is to be cost competitive—a challenge made more difficult in the small-car segment because of General Motors' low-labor-cost links to Japan and Ford Motor Co.'s plans to cut costs by building in Mexico. The big auto makers keep their small-car prices unnaturally low in order to improve their CAFE numbers—again, a hardship for AMC, whose only volume autos are small cars, he said.

AMC won't achieve its goal by increasing automation, he said. The key, he said, is to make labor costs at Kenosha competitive with those of other makers of small cars. AMC's UAW contract expires this year.

He said AMC plans to keep the Alliance and Encore as its smallest models and expand through what the Europeans call Class 5—midsize cars like the new Ford Taurus and Sable and the Audi 5000. — KATHLEEN HAMILTON

Eagleburger joins board of directors of Yugo America

NEW YORK.—Lawrence S. Eagleburger, president of Kissinger Associates, Inc., and former U.S. Undersecretary of State for political affairs, joined the board of directors of Yugo America, Inc., last week.

Eagleburger was a top advisor to former Secretary of State Henry Kissinger during the Nixon Administration. He is now Kissinger's business associate.

Eagleburger retired from the State Department in May, 1984, after 27 years as a career foreign service officer. He served as ambassador to Yugoslavia from 1977 to 1981, before he was appointed to the undersecretary post. That is the third ranking office in the State Department.

Eagleburger will "advise and help Yugo America in its relationships with Yugoslavia," according to Malcolm Bricklin, chairman of Yugo America.

Yugo America will import subcompact Yugo cars to the U.S.

Pace is three days ahead of 1984

Year's auto output tops a million

By Louise Kertesz
Detroit Reporter

Setting a brisker pace than last year's, U.S. car production passed the one million mark last week.

The millionth car was assembled last Monday (Feb. 11). In 1984, the milestone was reached on Feb. 14.

Year-to-date output of 1,157,471 cars was 2.69 percent ahead of the 1,127,173 completed last year at this point.

Last week's scheduled production of 173,796 cars was down a bit (1.76 percent) from the previous week's 176,912, due in part to weather-related slowdowns.

General Motors, Ford Motor Co., Chrysler Corp.and Honda all reported production losses last week due to severe weather.

Last week's build was also down 2.48 percent from the year-ago week's 178,218.

Companies shared last week's estimated production as follows: GM, 61.69 percent; Ford, 21.81 percent; Chrysler, 13.29 percent; American Honda, 2.05 percent; Volkswagen of America, 1.15 percent, and New United Motor Mfg., Inc., 0.01 percent.

A GM spokesman confirmed that a second shift will be added in July at its Wentzville (Mo.) plant, which builds C-cars.

GM scheduled two overtime shifts Saturday (Feb. 16) at its plants in Arlington, Tex.; Doraville, Ga.; Fairfax, Kans.; Janesville, Wis.; Lakewood, Ga.; Leeds, Mo.; Lordstown, O.; Oklahoma City;, Orion Township, Mich., and Wilmington, Del.

One overtime shift was scheduled Saturday at GM's plant in Wentzville.

Honda scheduled 10 hours of overtime Saturday at its Marysville (O.) plant.

Ford has scheduled daily overtime this week (Feb. 18) at all its plants except Wayne, Mich.

Ford shows off its newest, months ahead of sales date

By Kathleen Hamilton
Assistant Managing Editor

CHICAGO.—Ford Motor Co. came to the Chicago Auto Show with pre-production prototypes and promises of vehicles to come. It was an unusual gamble: Introducing vehicles months before they go on sale.

But most people know the Ford minivan, Aerostar, is coming out this summer and will wait to compare it with the General Motors and Chrysler Corp. entries before buying, said Louis Lataif, Ford North American Automotive Operations sales vice president.

As for the early unveiling of the midsize entries, Taurus and Sable, Lataif said most people buy cars when their old ones need to be traded. Ford won't lose many sales of older-style cars by showing off its new ones, he said.

Besides, the Chicago show was the first stop in a cross-country tour for Taurus cars. They will be shown off to dealers, employes, suppliers and the press until their introduction this fall as 1986 models.

Ford Division has targeted sales of 240,000 Taurus models in the first full year of production, said Robert Rewey, the division's new general manager. He predicted his division's most popularly equipped Taurus will sell for about $10,000. And he touted the new wagons as the most aerodynamic in the industry.

The new Merkur XR4Ti, on sale only in California until March 7, also was here for the show. Lincoln-Mercury has filled 800 of the 850 franchises for the new line so far, said John Warren, Merkur marketing manager. First full-year sales are targeted at 20,000.

The next Merkur will debut in the U.S. in 14 months, said L-M's new general manager, Thomas J. Wagner. Industry sources indicate it will be a sedan based on the European Granada's replacement, codenamed Scorpion.

By the end of the decade, L-M aims to capture one full percentage point of the market with Merkur, Wagner said.

Ford has equally big plans for its minivan. Rewey predicted sales of close to 200,000 Aerostars in its first full year of production. That would be peak production capacity.

Rewey said he expects 70 percent will be equipped with an optional V-6 that gives a towing capacity of 5,000 pounds. Ford also expects to produce 15 percent of Aerostars as vans ready for conversions.

The Aerostar and similar minivans by its competitors will probably slice 20 percent off the station wagon market, Lataif said.

Executives here also took an unusual step in confirming their mid-year plans for a redesigned Escort and Lynx with a 1.9-liter engine (up from 1.6 liters), and an updated SVO Mustang with an electronically injected intercooled, turbocharged 2.3-liter engine.

Makers schedule 70,246 trucks, highest of year

With overtime scheduled at 12 plants, domestic makers expected their highest weekly output of the year last week—70,246 units. The figure was about even with the previous week's 69,688 but was 11.75 percent better than the year-ago week's 62,860.

High-level production schedules were reported despite weather-related curtailments.

Last week's estimated production topped the highest production week of 1984 by 80 units.

So far this year, 435,858 trucks have been built, 5.96 percent more than the 411,327 assembled last year at this time.

General Motors scheduled two overtime shifts Saturday (Feb. 16) at the following plants: Flint (No. 1 and 2); Janesville, Wis.; St. Louis; Lordstown, O., and Pontiac (No. 6).

Ford has scheduled daily overtime this week (Feb. 18) at all its plants except Twin Cities.

Canadian output holds steady but trails 1984 week

Scheduled Canadian production of 19,546 cars last week held steady (down 0.09 percent) with the previous week's 19,564 but fell 15.45 percent below the year-ago week's 23,118.

So far this year, 131,446 cars have been built, down 10.02 percent from the 144,618 completed last year at this point.

Makers targeted assembly of 18,704 trucks last week, about the same (down 0.17 percent) as the previous week's 18,735.

Year-to-date, 121,216 trucks have been assembled, 10.06 percent more than the 110,130 built last year at this time.

At Chrysler's Windsor (Ont.) plant, 2,604 Plymouth Voyagers, 2,718 Dodge Caravans and 594 Mini Ram Vans were scheduled for production last week, bringing the T-115 total for the year to 39,341.

Mazda to have $6 wage edge at Michigan plant

By Marjorie Sorge
Labor Editor

Mazda's plant in Flat Rock, Mich., will have a labor cost advantage of at least a $6 an hour over the rest of the U.S. auto industry by 1991.

Sources said this is likely to result from its agreement with the UAW and its status as a new company. Mazda will open its car production plant at Flat Rock in the fall of 1987.

It is not just the $6 wage-and-benefit advantage that will hurt the rest of the U.S. auto industry, some analysts said. They expect the flexibility in plant operations granted in the agreement to add another $1.50 an hour to Mazda's competitive edge.

"It raises some questions about the competition on U.S. soil," said one analyst.

Interestingly, the letter of intent reached last year between the UAW and Mazda already stipulates what will finally become the collective bargaining agreement.

In the first contract, the base wage rate at the Flat Rock plant (excluding cost-of-living-adjustments) will be $14.30 an hour beginning in July, 1988, and climbing to $16.97 by June 1991.

With COLA, the rate is still $14.30 at the beginning and $18.99 by June, 1991. It will be uniform for all production and maintenance classes and all maintenance employes. COLA will be paid in full from the beginning of the agreement and based on the U.S. Consumer Price Index.

That initial wage rate represents 85 percent of Ford's anticipated base rate of $16.82 by July, 1988, the date the Mazda-UAW contract is expected to take effect.

According to the letter, the contract will stipulate that the starting wages will not be greater than 85 percent of the base rate plus COLA prevailing in the auto industry with the difference to be reduced in steps by the end of the first agreement, allowing the Mazda workers to reach levels generally prevailing in the industry by 1991.

Some analysts say the Mazda workers will still trail the industry's base rate by 70 to 80 cents an hour. The rest of the $6 an hour is principally the service pension and retiree insurance costs Mazda will not have to bear since it is a new company. Pensions and health insurance will account for about $3.50 an hour.

Mazda workers are also guaranteed 85 percent of any general wage increases at Ford preceeding the effective date of the new agreement.

The Mazda-UAW letter of intent says bargaining should begin within three months of commercial production startup and be completed within six months. Production is scheduled to begin in the fall of 1987.

According to the letter of intent, the following must also be incorporated in the collective agreement:

1. UAW recognition of produc-

Peeking at P-car

Chrysler 86½ entry: Small but upscale

Chrysler Corp.'s 1986½ subcompact P-cars will be larger and more luxurious than Omni and Horizon, although the four-door hatchback is slated to eventually replace those cars. A two-door hatchback also will be offered. The P-cars will be powered by a new 1.8-liter engine and the 2.2 in normally aspirated and turbo versions. The new cars will be based on the Daytona/Laser floorpan and will be about three inches shorter and two inches wider. Chrysler is planning on continuing Omni/Horizon production into 1986.

Extension appears possible; Reagan 'considering' matter

Fate of VRA still up in the air

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Extension of voluntary restraints on Japanese auto exports to the U.S. was a hot issue in Washington last week. The situation was changing day by day, sometimes hour by hour.

There were reports that the Voluntary Restraint Agreement would be allowed to expire March 31 as part of a Reagan Administration trade policy that calls for America to overcome its industrial competitiveness problems largely without government aid.

On the other hand, there was speculation that the Japanese will continue some type of restraints, and President Reagan said at his news conference that he is still "considering the matter."

Lawmakers who count Ford Motor Co., Chrysler Corp. and the UAW as constituents are expected to fight for some type of restriction on Japanese autos, whether voluntary or not. The Japanese could also act to limit exports, although at a much higher level, without a formal White House request. The current agreement permits export of 1,850,000 cars a year to the U.S.

If the President makes no decision, thus putting the monkey on the backs of the Japanese, some observers feel that the Japanese will continue quotas simply to protect themselves from congressional pressures for quotas and from Administration pressures to open up markets for other products as well as U.S. auto parts and vehicles.

There were unconfirmed reports last week that the Japanese Government will continue some type of quotas on auto exports to the U.S.

While last week's official White House line on whether to seek a fifth year of the Voluntary Restraint Agreement was that the President had yet to reach a decision, it was widely reported that Cabinet trade advisors had formally recommended not to ask Japan for an extension of the four-year-old agreement.

White House spokesman Larry Speakes said the matter had not gone before the President as of last week, but he hinted the Administration may not take any position on it since "we're not required to make a decision because it's voluntary on the part of the Japanese."

White House officials said the Cabinet recommendation would be reviewed by Secretary of State George Schultz and National Security Advisor Robert C. McFarlane as part of an overall review of U.S.-Japanese relations.

At his press conference last week, President Reagan said the VRA matter was still under consideration. His remarks brought this response from Kenneth Whipple, Ford vice president for corporate strategy:

"We are encouraged that the President is still considering continuation of restraints in light of the nation's trade deficit that has already cost our country over two million jobs and $30 billion in annual trade revenues. If the Japanese restraints are allowed to expire in March, more American jobs will be lost and the trade deficit will continue to rise."

Meanwhile, on Capitol Hill, U.S. Trade Representative William Brock confirmed that Administration officials are against continuing protection for U.S. car builders.

Brock said he would not be surprised to see Japanese vehicle imports rise by as much as 750,000 units in the first 12

Jeep Cherokee to be built in China this year

By Richard Johnson
Detroit Reporter

American Motors and its Chinese partner will begin assembling Jeep Cherokee kits in Beijing later this year—initially for sale in China and later for export.

Meanwhile, AMC has confirmed that Beijing Jeep Corp., a joint venture of AMC and the Chinese Government, enjoyed a profitable first year of operation. The joint venture earned the equivalent of $12.5 million in 1984, according to Joseph Cappy, AMC vice president—marketing group.

In addition, Cappy said, AMC may announce a replacement this week for Ronald Gilchrist as head of the company's China operation. Gilchrist left late last year to take an international assignment with General Motors.

Cappy said the partners are saving announcements on a variety of topics arising from the Chi-

Bumper issue stays alive; Senate bill to ask 5-MPH

By Helen Kahn
Washington Bureau Chief

WASHINGTON.—The need for stronger bumpers was a major part of Senate Commerce Committee hearings calling NHTSA on the carpet for its passive attitude toward the auto companies.

Senator Jack Danforth, Missouri Republican and chairman of the Senate committee, plans to introduce a bill that would, among other mandates, require the 5-MPH bumpers that existed from 1980 to 1982.

The current standard (the first rollback of the Reagan Administration) now requires only 2.5-MPH bumpers, front and rear.

Although Danforth has not yet introduced his bill, MVMA has put itself on record as totally opposed. Fred W. Bowditch, MVMA vice president, said such a move is "simply unneeded" since market forces are already leading to more-damage-resistant bumpers than those required by the standard. Moreover, said Bowditch, new legislative language might endanger provisions of current law that mandate cost-effective bumpers.

But two other groups—the Insurance Institute for Highway Safety and the Center for Auto Safety—took issue with the industry position.

Many auto makers that claim to be putting 5-MPH bumpers on their 1985 models are using bumpers that are weaker than those of 1980-82 which had to meet the federal bumper standard, according to data submitted to the Senate Commerce Committee by IIHS.

In fact, Brian O'Neill, IIHS executive vice president, said some so-called 5-MPH bumpers are so

breaking news

Ford prices up $200; small cars exempt

DEARBORN.—Ford Motor Co. last week raised car prices an average of $200, or 1.7 percent, following actions taken by General Motors and Chrysler Corp. at the beginning of the year. The Ford hikes, effective today (Feb. 25), range from $104 on a Mustang to $538 on a Lincoln Continental. There were no changes in the prices of the company's smallest cars —Ford Escort, EXP and Tempo and Mercury Lynx and Topaz. Prices of some options went up, but there were no changes in dealer discounts or destination charges. Ford also announced an 8.8 percent financing program on Tempo and Topaz for Feb. 22 through April 22. It is available through Ford Motor Credit Co.

Chrysler's little truck won't be so little

DETROIT.—When the Dodge Dakota compact pickup bows in 1987, it will be larger than the competition from Ford and General Motors. Standard wheelbase will be about four inches longer than the competition, and the Dodge Dakota will be the only subcompact to offer an eight-foot bed. Chrysler's 2.2-liter

GM and suppliers to be partners

'A brand new way...to do business'

By Marjorie Sorge
Labor Editor

The General Motors Chevrolet-Pontiac-Canada Group and its suppliers will be partners, and long-term understandings will be more important than contracts, according to a CPC official.

"We are developing a brand new way for CPC to do business," said Donald A. Pais, director of materials management for the group. "We will have new relationships with our suppliers, based more on partnerships."

New ways of doing business will also include a continued move toward 100 percent single sourcing (currently 96 to 97 percent), fewer suppliers, early sourcing, supplier input in plant construction, strategic planning, and prototype development and on-site supplier representatives.

The entire operation will hinge on two things—getting all suppliers hooked up electronically to the factory within the next two to three years and allowing both the supplier and the CPC Group to be flexibile.

CPC will not be "heavy-handed" in getting its suppliers to adopt the GM computer network and will let them make their own choices, Pais said.

"But they must understand that they have to produce world-class quality at a cost-competitive price, which means value," he said. "How they get there is really their own independent business decision and judgment.

"There are some things you feel so strongly about that you can't just say 'here's a technique we think is so powerful that if you don't use it, we don't think you will be competitive. But that is up to you. You either believe what we are saying or you might find out the hard way.'

"But that is a little different approach than saying 'here's the program I want you to use and if you don't, you are out.'"

But to compete, suppliers will have to have direct computer compatability. Within the next two or three years, suppliers will have on-line access in the plant, Pais said, allowing them to see exactly how many parts they have in the plant at any specific time and when the last shipment was received.

Getting suppliers to agree to this system will also require a long-term commitment by the corporation.

"You shouldn't just be buying parts, you should be buying people and partnerships," Pais said. "In any business, it is the people running the things and the mangement systems that make the difference.

Big wheels

Brad Burns, of Sun Valley, Calif., lifts the front of a huge balloon model of a Honda Big Red all-terrain vehicle. The actual vehicle is seen to Burns' left while another 22-foot inflatable looms in the background. The balloon vehicles are used at promotions around the country.

Yamaha to play role in '86 Taurus/Sable feature

Ford to unveil a 4-valve engine

By Dan McCosh
Detroit Reporter

The first American entry in the current trend to four-valve cylinder heads will be a specialty version of the 1986 Ford Taurus/Sable cars, Automotive News has learned, with the performance option designed and possibly supplied by Japan's Yamaha Motor Co.

Four-valve cylinder heads are being viewed as potential replacements for turbocharging as a means of offering high-horsepower power options on the current generation of small-displacement engines.

Interest in such performance options has been enhanced since transverse front-drive engines have made it difficult to install larger-displacement engines in some models.

Several European cars—including Saab, Mercedes-Benz and Porsche—have four-valve engines on the market, along with Japan's Toyota. Honda has been offering a three-valve engine. Domestic manufacturers have been working on prototypes, but so far none have been offered to the public.

Ford's Taurus will be powered by a new three-liter engine being tooled in its Lima (O.) engine plant. It is a sophisticated V-6 with electronic port fuel injection, a key part of Ford's program to meet current Corporate Average Fuel Economy standards.

In the high-output version, the Ford engine will feature a Yamaha-built cylinder head with four valves per cylinder, the result of a joint agreement announced early in 1984 between Ford and the Japanese company, best known for its work in motorcycles.

The Ford deal also could mark another inroad in a supplied component from Japan. Yamaha recently has been developing several exotic cylinder heads for its high-performance motorcycles and recently has been concentrating on automobile engines.

A Ford spokesman said sourcing for the four-valve head has not been determined, although other Ford sources indicate Yamaha is the prime candidate as a supplier.

A prototype engine with a Yahama five-valve cylinder head recently was unvieled, with a block that apparently is a Toyota racing engine. Yamaha also has built engines with six and seven valves per cylinder for motorcycles.

Multi-valve engines increase fuel and air flow, hence horsepower. They also offer the opportunity to "tune" valve timing specifically to engine speed, which allows higher torque at low speed, in contrast to turbocharging that increases horsepower relative to engine speed.

Import inventory up; 33-day supply on hand

By Arthur Flax
Automotive News Staff

Inventories of new imported cars edged up to a 20-month high of 262,990 units on Feb. 1, but importers managed only a slight boost in days' supply as sales also picked up a bit.

Higher inventories were good for a half-day supply increase, from 32½ to 33 days, far below the 60-day supply considered ideal.

The latest days-supply figure equals the stockpile recorded on June 1, 1983, and that figure and the unit count are the highest since that time, when there were 275,411 imported cars in stock. The figures on Feb. 1, 1984, were 205,337 cars and 26 days. On Jan. 1 of this year, the numbers were 259,933 cars and 32½ days.

The supply of imported trucks fell to 101,619 units on Feb. 1, compared with 114,485 the previous month, and sales increased slightly. As a result, average days-supply fell to 36½ from 45. On Feb. 1, 1984, there were 78,471 trucks in stock and the days-supply was 45.

Combining cars and trucks, February opened with 364,609 units in inventory, or 34 days' worth. January started with 374,418 units, worth 36 days. The previous February began with 283,808 vehicles and 30 days.

During January, German makers increased inventories and sales rates fell, resulting in increased days-supply levels.

Increased sales rates among European makers other than the Germans and a relatively small boost in inventories resulted in a drop in average days-supply.

Sales rates and shipments among Japanese makers were reasonably stable.

The Japanese makes accounted for 59.28 percent of all import cars in stock; German cars, 29.23 percent, and cars from other European countries, 11.49 percent.

One month earlier, the shares were Japanese, 62.08 percent; German, 27.17 percent, and other countries, 10.75 percent.

February started with the Japanese cars averaging a 25-day supply, down from 26 the previous month. The days-supply figures by make: Toyota, 12; Honda imports, 12½; Mitsubishi, 13; Isuzu, 19½; Subaru, 23; Nissan, 29, and Mazda, 47½.

In addition, the Mitsubishi-built imports marketed by Chrysler Corp. averaged a 60½-day supply: Dodge Colt, 51; Plymouth Colt, 53½, Dodge Vista, 72; Plymouth Vista, 76; Plymouth Conquest, 128½, and Dodge Conquest, 142½.

Chevrolet's captive imports averaged a 108½-day supply: 38 for the Suzuki-built Sprint and 146 for the Isuzu-built Spectrum.

German makes had an average of 70 days' supply, up from 53 the previous month: Mercedes-Benz, 39½; Porsche, 46; BMW, an estimated 65 days; Volkswagen imports, 73½, and Audi 110.

There was a 46½-day supply of cars from other European countries, down from 55½ days the previous month: Saab, 31½; Jaguar, 34½; Volvo, 37; Peugeot, an estimated 45 days; Maserati, 47; Alfa Romeo, an estimated 65 days, and Renault, 221.

Japanese-built light trucks and their days' supplies: Mitsubishi, 22½; Nissan, 24; Toyota, 33½; Mazda, 36½, Chrysler, 51½, and Isuzu, 164.

Perot and Texas bank duel for (Saturn?) land

Deep in the heart of Texas, a billionaire and a bank are fighting over 6,300 acres of prime land some have speculated is slated for General Motors' Saturn plant.

Early last week, the Dallas-Fort Worth Business Journal reported that H. Ross Perot, chairman of Dallas-based Electronic Data Systems, Inc., purchased 6,300 acres of land in North Texas for more than $100 million.

Late last week, the Gibraltar Savings Bank, of Dallas, said it had a binding contract with Gulf National Corp., which has owned the land since 1973.

According to an EDS spokeswoman, Perot has an agreement, too.

Initial speculation was that Perot, who became a member of the General Motors board of directors when his company was purchased by GM last fall, bought the land as a site for the Saturn plant.

However, the EDS spokeswoman said the land was purchased for Perot's private use, was purchased in four individual tracts and is in no way connected with the Saturn project. Perot, a billionaire, has extensive real estate holdings.

The Saturn plant site has created enormous interest in many states, and governors have been flocking to Detroit to make their pitches to GM and Saturn officials.

There has been speculation that the plant could end up in Texas, where Perot obviously would like to see it based.

The land Perot reportedly acquired is near the site of EDS's planned new corporate headquarters. According to the Journal story, the purchase is one of the most expensive land transactions in Texas history.

Limo by Tony's

Tony's Limousine, Inc., Warren, Mich., has designed and built the Fifth Avenue Limousine. Features include forward facing jump seats, separate rear stereo, reading lamps and choice of either cloth or leather upholstery. Retail price is $28,000.

Pa. lawmaker proposes loan deal for Saturn

HARRISBURG, Pa.—State Rep. Tom Tigue, with the backing of other legislators in the General Assembly, has proposed that the Commonwealth offer a $100-million interest-free loan to Saturn Corp. as an inducement to build its new plant in Pennsylvania.

Tigue said legislation is being drafted to offer a similar deal to any firm agreeing before June 15 to locate a $1-billion industry in the state.

BMW unfazed by Ford's cut in diesel use

By Richard Feast
European Editor

MUNICH.—Ford Motor Co.'s considerable scale-back in orders for BMW's turbodiesel engine is causing no consternation at the German group's headquarters here.

A senior BMW source confirmed that Ford is committed to paying for a minimum number of engines regardless of how many it decides to receive. He declined to reveal exact numbers, but said that since deliveries began at the end of 1983, BMW has shipped 4,500 units to Ford in the U.S.

This compares with an original agreement for BMW to supply 190,000 engines over a three-year period. The decline in U.S. diesel demand caused a revision in 1983 to only 71,000.

Although Ford's diesel program for the Lincoln Continental and Mark VII is in doubt, BMW is pressing ahead with plans to double the engine-building capability of its factory at Steyr, Austria.

In March, Fred Sinowatz, Austria's chancellor, will attend the opening of facilities that will raise Steyr's annual capacity from 140,000 to 300,000 engines by the end of next year.

The second phase of its development is beng completed in conjunction with the construction of the automobile factory at Regensburg, which will open in the fall of 1986. It will begin producing at a daily rate of 100 (23,000 a year), rising over an eight-yar period to an annual capacity of 185,000.

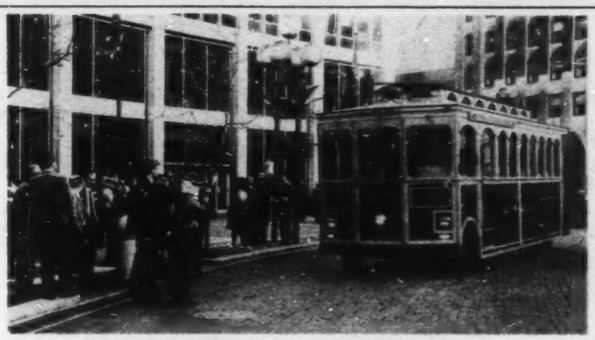
This year, BMW's existing facilities will be stretched to full capacity—about 460,000 a year, according to Chairman Eberhard Von Kuenheim.

Last year, BMW produced a record 432,000 cars, despite the spring strike by auto workers which affected output acros the whole West German industry.

Von Kuenheim reported that BMW Group sales last year rose 17.5 percent to $5.04 billion. While the full financial results will not be known until May, it is certain that 1984 will prove another record year for BMW.

Not all of its activities are progressing smoothly, however. The start of construction of its $200-million R&D center was delayed seven months because of the complexities of obtaining building permits from the Munich authorities.

The center, being built on the site of former U.S. Army barracks north of Munich known as Alabama, is unlikely to open before 1987.



A bit of San Francisco for Indianapolis

The arrival of trolleys in Indianapolis was observed by dignitaries, public officials and members of the local media. The vehicles were manufactured by Transportation Vehicles, Inc., Zellwood, Fla., and use an 8.2-liter diesel engine and MT 643 automatic transmission produced by Detroit Diesel Allison Division of General Motors. The six new trolleys, styled like San Francisco's cable cars, run on two routes designed to serve as a downtown transportation system.

Despite problems in Europe

Renault-AMC unity intact—Dedeurwaerder

By Richard Johnson
Detroit Reporter

Despite Renault's problems in Europe, the French auto maker's partnership with American Motors remains in good shape, according to Jose Dedeurwaerder, AMC president and chief executive officer.

Dedeurwaerder told a meeting of the French-American Chamber of Commerce in Detroit last week that the arrangement is "long-term."

The state-owned French auto maker is expected to report a loss of at least $8 billion francs ($825 million) for 1984. Similar losses are now being projected for 1985. The French Government abruptly ousted Chairman Bernard Hanon recently and replaced him with Georges Besse.

"I know you're aware of Renault's recent problems in Europe," said Dedeurwaerder. "The important thing to remember from our perspective at AMC is that the partnership is long-term. You can't expect either partner to set new sales and earnings records every year; each will have bad years as well as good ones.

"Last year was a good year for AMC," he said. "But it was a bad year for Renault—both in sales and earnings. The Renault management team is making many decisions to resolve the problem."

Renault and AMC joined forces in 1979. The French company now owns 46 percent of American Motors common stock. Several top executives at AMC, including Dedeurwaerder, emigrated from Renault management ranks.

Dedeurwaerder said AMC's purchases from Renault totaled more than $500 million last year.

"Today, the partnership is stronger than anyone on either side of the Atlantic had envisioned at the time it was established," he said. "Renault was the leading European brand name in this country last year. This was achieved, of course, through the AMC partnership.

"Renault brand sales in North America have grown to the point where the Renault product cycle plan for Europe is in many ways dependent on what AMC does here," he added. "No major new product program is undertaken without first making sure it fits in with our needs and plans here in North America."

Dedeurwaerder said AMC's new-found profitability is "proof of the wisdom" that went into the partnership.

AMC later this week is expected to report a 1984 profit of about $15 million, its first profitable full year since 1979. While the margin is slim compared with that of other U.S. auto companies, Dedeurwaerder stressed last week that the company achieved a turnaround of more than $250 million on continuing operations in 1984.

"When you compare that with the recent performance of other companies—especially companies of our size, with sales in the range of $4 billion—it is indeed an accomplishment to be proud of," he said.

AMC deal opens

Car shipping a U.S.-Japan problem

By Jake Kelderman
Washington Reporter

WASHINGTON.—A Reagan Administration decision to let voluntary restraints on Japanese auto exports to the U.S. expire might indicate that the Administration can live with an increase of imported Japanese cars but it does not mean the Administration can live with how those cars get here.

In a series of letters and meetings, U.S.Trade Representative William Brock has let the Japanese Government know he is not happy about the fact that virtually all Japanese cars and trucks arrive at U.S. ports in Japanese or Japanese-controlled ships and that little of this estimated $500-million annual business accrues to any U.S. shipping firm.

In letters to Japanese Foreign Affairs Minister Shintaro Abe and at a recent meeting of the State Department's U.S.-Japan Interagency Maritime Group, Brock warned the Japanese that the current situation "has created a disturbing potential for trade disputes between our countries," and that something must be done about it.

"It's an outrageous situation," said a source close to the matter at the trade representative's office in describing what he labeled a nearly closed operating system.

Brock has asked the International Trade Commission to look into the competitive nature of the car-shipping business between the U.S. and Japan and report back to him by June. A public hearing is scheduled for April 9.

According to Andrew Gibson, president of American Automar, a U.S. shipper that transports Volvos to the U.S., Japan now controls about two-thirds of worldwide seaborne trade in passenger vehicles. West Germany is a distant second with 16 percent and France is third with 9 percent, he said.

He also expects that Japan's control of the market will grow during the next few years since 31 of the 39 Pure Car Carriers (PCCs) being built around the world are for Japanese companies.

Said Gibson, who has been trying to break into the Japan car carrier business for two years, "They've got a little monopoly going there."

Shipping cars across the oceans has undergone some rapid changes during the past 20 years.

From cumbersome operations that involved the hoisting of about 2,800 vehicles per ship in an operation that could take days, it has evolved into a highly automated, streamlined operation involving ships that can carry as many as 6,000 vehicles that can be driven off in a matter of hours.

Indeed, it is now common practice for car carriers to spend no more than 18 hours in any port before steaming back to home base in what has effectively become a transoceanic conveyer belt.

For the major Japanese car companies, a ship arrives about every three days at East and West Coast ports.

Those ships are not owned by the Japanese car companies, however. They are leased or chartered by those firms from about seven major Japanese shippers.

Honda uses ACT Maritime, Mitsui OSK, K-Line and NYK-Line; Toyota uses K-Line, NYK-Line, Sanko-Line, Toyo Fuji-Line and an American company, Great American Lines Co. (which transports vehicles one way and citrus products back to Japan); Mazda uses NYK-Line, Yamshita-Line, Mitsui OSK and K-Line, and Subaru uses NYK-Line and Mitsui OSK.

Nissan, unlike the other Japa-

Nader emerges as protector of G. Washington

WASHINGTON.—Keeping George Washington out of the "realm of sleaziness" is the latest mission of Ralph Nader.

In a letter to President Reagan on the eve of the anniversary of Washington's birthday, Nader said that using revered heros of the past as "salespeople or hawkers on television, radio and print advertisements" can't be stopped by regulation, but President Reagan could be the "custodian of matters relating to Presidential taste and decorum."

Nader said Mr. Reagan could urge businessmen to rein in their "promotional addictions" and let the historical record speak—at least so that school children do not think George Washington was a salesman.

George Washington should not be selling Datsuns, Nader said. He added that he can't imagine Mexican merchants using Benito Juarez to sell tamales.

United Dealer Group in Chapter 7; lawsuits filed

Dealer funds in doubt as warranty firm folds

By Richard Johnson
Detroit Reporter

An estimated 40,000 extended warranty contracts issued by United Dealer Group, Inc. (UDG), and sold by more than 1,300 auto dealers are still in effect, even though the Arizona-based insurance marketer is in U.S. Bankruptcy Court and service claims are not being paid.

The collapse of United Dealer Group, Phoenix, has left dealers in 39 states wondering what became of millions of dollars they say were remitted to the company following the sale of warranties.

At least two insurance companies have filed suit against UDG alleging fraud and racketeering. An attorney for one insurer suggested that "millions" which should have been paid into reserve trusts may have been pocketed by United Dealer Group's top officers or channeled into other investments.

United Dealer Group last year sought protection under Chapter 11 of the U.S. Bankruptcy Code after an insurance carrier withheld payment of claims. On Feb. 1, a Federal Bankruptcy Court judge ordered the case into Chapter 7 and has appointed a trustee to oversee liquidation of assets.

The carrier, Integrity Insurance Co., Paramus, N.J., filed suit in U.S. District Court in Arizona last summer, charging United Dealer Group with issuing faulty and invalid insurance policies.

The suit alleges that United Dealer Group and its principal officers, Marvin E. Cowdrey and R. Peter Nielson, "employed a scheme and artifice to intentionally defraud plaintiff, automobile dealers, automobile purchasers and lienholders by a number of means."

Another carrier, Texas-based Early American Insurance Co., has made similar allegations against United Dealer Group in a civil suit against the company.

Cowdrey and Nielson each hold one-third shares of the company. The remaining shares are owned by Marc Bingaman, of Orange County, Calif., who is not an officeholder in the company.

Western Star's 'Gold Star'

A special "Gold Star" model has been added to its 1985 Class 8 lineup by Western Star Trucks. The company said it will build 120 units, equipped with a 400-HP Caterpillar or Cummins diesel, 13-speed transmission, air-ride suspension and a 60-inch high sleeper with a velour mattress cover.

Ford's Aerostar goal is third of mini sales

By Jack Bernstein
Staff Correspondent

ST. LOUIS.—Ford Motor Co. expects to account for a third of the industry's minivan sales once its new Aerostar gets into full production, Edson P. Williams, Ford Truck Operations general manager, said here.

At a press preview of the Aerostar at the 1985 St. Louis International Auto Show, he said Ford is shooting for "between 30 to 35 percent of the market. We don't know how big the market will be eventually, but we don't expect it to settle down for two or three years."

Production of the rear-wheel-drive Aerostar is scheduled to begin May 5 in a renovated car-assembly plant here, with 100,000 units due in 1985. In calendar 1986, Ford expects to build 200,000 of the small vans.

Williams isn't worried by the fact that Ford is the last of the Big Three to enter the minivan market, and said "I'd be disappointed" if Ford got less than a third of the market.

• Explaining the company's late start, he said "Ford delayed development of the minivan to concentrate on other truck lines. We got to them as fast as we could and in the priority we wanted.

"The changeover (of the St. Louis plant) was a much bigger job than we anticipated," he added. "We had to invent machinery as we went along. The plant will be the industry's most modern, with the latest in robots and computers, and will be 'state-of-the-art' for 10 years.

"This is going to be the most highly automated plant not only

'84 tallies top 4 million for first time

Registrations hit peak

Registrations of new trucks of all types in the U.S. hit an alltime high in 1984, scoring spectacular gains in all market segments and topping the four-million mark for the first time ever.

During the year, according to R.L. Polk & Co. statistics, 4,047,192 light, medium and heavy trucks were registered, an increase of 36 percent over the year-earlier 2,976,556 and 2.1 percent greater than the previous high of 3,963,340 established in 1978.

Ford again was No. 1 in total truck registrations in 1984 with 1,162,001 units, up 23.3 percent from the year-earlier 942,568 but 11.6 percent below the company's alltime high of 1,314,251 set in 1978.

Chevrolet was runnerup with 1,089,853 tallies during the year, an increase of 20.5 percent over the previous year's 904,672. Chevrolet's best year also was 1978, when 1,275,787 units were registered.

A record 3,792,002 light trucks were registered over the 12-month span, up 35.4 percent from the year-earlier 2,799,636 and 5.1 percent greater than the previous high of 3,606,307 established six years earlier.

In 1984, the non-captive imports accounted for 18 percent of the light-truck tallies with 683,636 units. Six years ago, there were only 210,266 tallies, representing 5.8 percent of the light-truck total.

Registrations of medium trucks during the year were substantially higher than those in 1983, but they were far below the count in 1978. Heavies were higher in 1984 than both 1983 and 1978, but trailed tallies posted in record 1979.

During the year, there were 58,374 medium-truck registrations, a gain of 22.9 percent over the previous year's 47,482. The count was 64.7 percent below the 165,196 units tallied in 1978.

The 12-month total for heavies in 1984 was 196,816, up 52.1 percent from the year-earlier 129,438 and 2.6 percent higher than the 191,837 units registered in 1978. The count, however, was 7.7 percent below the alltime high of 213,174 units tallied in 1979.

Registrations were up sharply in 1984 in all weight classifications, with Group 1 tallies soaring to record levels.

The Group 1 total for the year was 2,178,694, an increase of 38.6 percent over the previous year's 1,572,277 units and 90.6 percent higher than the 1,143,064 trucks registered in 1978.

Group 2 tallies were 30.8 percent higher in 1984, 1,576,987 versus 1,205,417. But they were 62 percent below the alltime high of 2,408,269 units registered in 1978.

Soaring fuel prices in 1979 caused many Group 2 truck buyers to switch to more fuel-efficient compact trucks and the economic full-size and small domestic Group 1 vehicles developed in the first half of the '80s. This trend is likely to continue, especially among buyers using trucks for personal transportation.

• In 1984, there were 36,321 Group 3 registrations, a gain of 65.5 percent over the year-earlier 21,942 but 33.9 percent fewer than the 54,974 units tallied six years earlier.

The Group 4 count in 1984 was up 97.8 percent to 712 units, compared with the previous year's 360. However, the total was far below the 15,250 vehicles registered in 1978.

In Group 5, registrations increased almost fivefold during the year, from 923 units in 1983 to 4,422. Last year's total also was 50.8 percent greater than the 2,933 units tallied six years earlier.

During the year, there were 53,240 Group 6 registrations, an increase of 15.2 percent over the previous year's 46,199. But the 1984 total was only about a third

Continued on Page 56, Col. 5

HD registrations for '84 second only to '79 peak

New heavy-truck registrations in the U.S. last year were the second highest ever, with sharp gains in both Groups 7 and 8.

According to R.L. Polk & Co. statistics, 196,816 heavy trucks were registered, an increase of 52.1 percent over the year-earlier 129,438 units, but 7.7 percent below the record 213,174 tallied in 1979.

In December, 18,677 units were registered, a gain of 27.9 percent over the 14,604 tallied in the same month the previous year.

Registrations of Group 7 trucks during 1984 totaled 66,674 units, up 34.9 percent over the year-earlier 49,426 and 40.9 percent higher than the 47,315 units tallied in 1979.

The Group 8 count for 1984 was 130,142, an increase of 62.7 percent over the previous year's 80,012 and 21.5 percent below the 165,859 units totaled in 1979.

International led Ford in heavy-duty truck registrations with a 1984 total of 44,409 units, compared with 37,871 for runnerup Ford.

International was also No. 1 in Group 8 registrations with 29,309 tallies in 1984, while Ford was the Group 7 leader with 25,551 units.

IVECO reports record '84 sales of 3,452 trucks

BLUE BELL, Pa.—IVECO Trucks of North America, Inc., reported a record 3,452 truck sales to dealers in 1984, and James R. Bostic, president, said IVECO now is "the best-selling European (truck) nameplate in the U.S."

He attributed the sales success to the firm's "commitment to providing a range of trucks to ideally match the needs of wholesale/retail delivery business."

IVECO Z-Range diesel-powered trucks span Classes 3 through 5, which Bostic calls the "phantom classes largely abandoned by domestic manufacturers." The latest diesels, he noted, are turbocharged, "an IVECO exclusive in these classes."

Bostic said he expects IVECO sales in 1985 to hit another high of more than 4,000 units.

Automotive World News

1984 diesel sales top 1.2 million

Popular engine sets sales record in Europe

American car buyers may have given diesel cars the heave-ho, but in Europe motorists are fighting to get behind diesel-powered steering wheels.

Sales will almost certainly hit record levels when the counting for last year is finished. In the first three-quarters of the year diesel rgistrations were up more than 25 percent, while the market in general turned down slightly.

With firm growth over the past decade diesel penetration has reached significant levels. In Europe one in every eight new cars sold is a diesel. In a handful of countries like Italy, Spain and Belgium/Luxembourg the ratio is one in four.

Much of the attraction is the cost advantage diesel fuel has over gasoline at the pump. In Europe it is about 26 percent cheaper than premium. In Italy a gallon of diesel is 47 percent less than gas.

But this does not explain the popularity of diesels in West Germany where fuel is only 6 percent cheaper than gas. Yet Germans constitute the second largest national block of diesel buyers after the Italians.

The phenomenon is even more difficult to understand considering that the country's largely speed-limit free autobahnen — the only ones in Europe — are not the ideal habitat for most diesel cars.

Most of the diesel's popularity in Germany must be attributed to the pioneering work done on it by Daimler-Benz. It was building diesel cars long before they ever became fashionable, and D-B's standing in the country is such that whatever it does must be right.

More recently, in the mid-70's Volkswagen was the first to market a small, high speed diesel. This trend-setter was fitted to its best-selling Golf (Rabbit), and therefore helped seal the diesel's reputation.

The succession of new diesel products since the middle of the 1970's has accelerated the growth curve. Until VW introduced its gas-derived diesel in 1977, the only significant builders of this type of propulsion were Daimler-Benz, Peugeot and GM's Opel. Since then just about every volume maker has introduced modern diesel units, including some to power small cars like the Fiat Uno, Ford Fiesta and Peugeot 205.

Other manufacturers have chosen to buy diesel units off someone else's shelf. Ford uses Peugeot power in its larger cars, and Volvo buys from Volkswagen and Renault. The small independent producer, VM of Italy, supplies Austin Rover and Alfa Romeo for larger models. Even Lancia and BMW, avowed performance car makers, offer diesels now.

Saab remains the only company not to have declared any interest in the diesel. Alfa Romeo is exposed in Italy by not being able to offer diesels on its smaller cars. In the UK Austin Rover is without a small diesel unit, though it is collaborating with Perkins Engines on development of a direct injecion version.

It is difficult to predict diesel growth over the next few years. As gas models offer better mileage, the extra cost of buying a diesel car looks less attractive, particularly in countries where pump prices are similar.

The main unknown, though, is one that is beyond industry's control. While diesels are more expensive to buy initially, the artificially low price of their fuel in many countries provides a short pay-back period. But fuel prices can be manipulated by governments for fiscal reasons. Yesterday's bargain could become tomorrow's liability. The Italian boom in diesels occured only after the prices were suitably doctored — at a time which coincided with the introduction of some new Fiat diesels at the end of the 1970's.

Ten years ago diesel car sales in Europe were fewer than 200,000, or about 2.5 percent of the market. The record level was reached in 1982, when about 1.034 million diesel sales accounted for 11 percent of the total.

The only hiccup in the growth curve was in 1983. Sales fell to about 955,000 units, less than 10 percent of the market. But with sales last year running ahead by about 12.7 percent (at least in the first nine months) the year-end expectation is between 1.2 and 1.3 million.

—Richard Feast

Diesel fuel price varies

The biggest diesel volume in Europe last year was in the country where gasoline is the most expensive — Italy. There drivers pay $2.51 for a gallon of gas and $1.32 for diesel.

A pump price survey in January found the Swiss paying more for diesel fuel than gas, and British buyers paying much the same. Luxembourg provided the cheapest gas at $1.56. Diesel was most expensive in Ireland, $2.11, and cheapest in Spain and Sweden at $1.25.

The findings of Britain's Automobile Association have been converted to dollars per U.S. gallon. They are: Austria, $2.00 for a gallon of premium ($1.81 for diesel); Belgium, $2.01 ($1.48); Denmark, $2.15 ($1.29); France, $2.26 ($1.70); Holland, $1.97 ($1.34); Ireland, $2.36 ($2.11); Italy, $2.51 ($1.32); Luxembourg, $1.56 ($1.29); Norway, $2.17 ($1.17); Portugal, $2.16 ($1.32); Spain, $2.09 ($1.25); Sweden, $1.94 ($1.25); Switzerland, $1.74 ($1.93); United Kingdom, $1.76 ($1.75) and West Germany, $1.69 ($1.58).

Saab reveals direct ignition

Maintenance-free system being tested in 150 cars

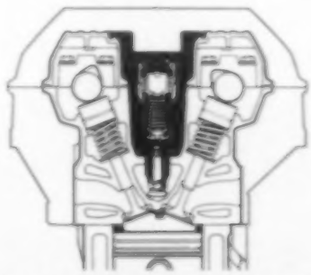
Richard Feast
European Editor

Saab's semi-open attitude to new technical developments is once more demonstrated with its latest device. It has revealed details of a new ignition system which dispenses with the conventional coil, rotor and high tension leads.

But it will put no production date on the fully patented system which it calls SDI (Saab Direct Ignition). A similar pattern has emerged with previous Saab developments, such as its pioneering work with exhaust driven turbochargers, its APC system which allows different fuel grades to be used in the same car, and the 16-valve version of its long-running four-cylinder engine.

Each was revealed well in advance, tested over several months on public roads and subsequently made available to the customer. The same is happening with SDI. Given that these are under hood developments — and can therefore remain fairly secret — it is an odd policy.

Saab is putting 150 SDI-equipped cars into tests around the world. Sten Wennlo, general manager of Saab Car Division, estimates that it will be "at least a year" before these tests are completed. That could put a production launch as late as the 1987 model year. It will be used initially on Saab's third generation 16-valve engine.



Each spark plug has the original 12-volt current stepped up to 400 volts by its own capacitor.

SDI comprises a cartidge that sits between the twin overhead camshafts of the engine. Each spark plug has the original 12-volt current stepped up to 400 volts by its own capacitor. The final ignition voltage of 40,000 is generated by a small, high-power coil fitted directly to each plug.

The arrangement eliminates the need for special high tension leads linking coil, distributor and rotor. SDI has no moving parts. A sensor for top dead center of each piston is permanently mounted on the crankshaft to measure timing.

Saab maintains that the system will be maintenance-free, and that the life span of the spark plugs will be three times longer than present ones because of the more efficient sparking.

SDI was developed in collaboration with the group's engine designers and Mecel AB, an R&D company within the Saab-Scania Combitech group.

The concept seems simple but, Hans Johansson, Mecel's managing director, adds, "It may seem simple, but wait until I've explained it."

Per Gillbrand, head of the Saab experimental engine department, believes timing is crucial to the launch of any product. He quotes the example of Beau de Rochas, who he says presented the first four-stroke engine 12 years ahead of Nikolaus Otto, the person credited with inventing it in 1874.

SDI follows a similar pattern just as Saab's turbo and multi-valve engines did. SDI's capacative ignition — as distinct from the conventional inductive system — is based on known principles. Saab believes its system will shortly be ready for a public debut.

There is another bonus for Saab. SDI will reduce its dependence on Bosch as a supplier. The West German company has won an enviable record as a supplier of high quality electrical and mechanical components. But last spring's metal workers' strike in the country underlined to auto makers just how exposed they are if the Bosch supply stops.

It seems likely that Saab will source from two Swedish companies, Luxor and SEM, for SDI components.

world news briefs

A Ford RS200 is crash tested.

Ford heads for the crunch

Ford of Europe has slammed one of its new RS200 mid-engined sports cars into a concrete wall to obtain sales certification. Subject to a development program and manufacturing studies, the four-wheel-drive RS200 is expected to be offered for sale in 13 European countries. The tougher exhaust emission regulations in Sweden and Switzerland would require additional engine modifications.

Construction collective

The construction equipment operations of Volvo and Clark Equipment are to merge. The $800 million company will rank third in size to Caterpillar and Komatsu.

Twelth time top

Arne Behncke, managing director of Ford-Norway, is all smiles as Ford retained market leadership in 1984 for the 12th consecutive year. It had about 14.7 percent, compared with 12.6 percent for GM and 11.3 percent for Mazda. For the first time models from one manufacturer occupied the top two best seller positions — Ford's Sierra and Escort.

Arne Behncke of Ford-Norway.

AFFORDABLE USED CAR RENTAL SYSTEM

EXCLUSIVE FOR **NEW CAR DEALERS!**

We Service You Like You've Never Been Serviced Before!

Unlike other used car rental systems, Affordable works closely with you right from the start! We train your people in our school. THEN we personally call on you regularly to monitor your progress & assist in any way possible. These visits will be frequent, not every-so-often! Your success is ours!

ADD AN AFFORDABLE USED CAR RENTAL SYSTEM TO YOUR PRESENT OPERATION...AND WATCH PROFITS GROW!

AFFORDABLE USED CAR RENTAL SYSTEM

STRATHMORE PROFESSIONAL BLDG. ■ HWY 34, MATAWAN, N.J. 07747

CALL NOW TOLL-FREE 1-800-631-2290 IN NEW JERSEY 201-566-0200

A taste of money.

Ahh! How sweet it is. E & G features give the appearance of wealth that customers want, and that gives you the edge—the E & G "Dealer's Advantage." Treat your customers to tantalizing extras like classic grilles and simulated convertible tops, landau roofs, stylish deck straps, high profits classic continental kits and more. Treat yourself to the huge profits that go hand and hand with E & G features. For 13 years we've been producing exquisite products with quality materials and E & G craftsmanship. We'll turn your inventory into the memorable classics that your customers crave. Call us today for the E & G "Dealer's Advantage." You can almost taste the money.

New program may cut car-finance rates

Salomon buys bank's auto paper

By Michelle Krebs
Financial Editor

The New York investment firm of Salomon Brothers, Inc., and Marine Midland Bank have joined forces to offer a new financing instrument which ultimately may push down car-loan rates and make more money available for automobile financing.

Salomon Brothers purchased from Marine Midland Bank $23 million worth of auto loan contracts, which were pooled and sold to an institutional investor as a security.

The move is believed to be the first step toward developing a secondary market for auto loans in the banking industry, patterned after the successful secondary market for mortgages, the most well-known being the government-sponsored Ginnie Mae and Fannie Mae.

Robert Reich, head of Marine Midland's national sales programs for indirect consumer banking, said development of the secondary market for car loans eventually should result in lower interest rates on car loans by creating more competition in the investment marketplace for pools of car loans.

The secondary market for car loans works much the way the secondary mortgage market does, except that the terms are significantly less. Most car loans are for 48 months or less.

The bank makes the car loan and holds it in its portfolio until it has a large group of them. Through the investment firm, the pool of loans is sold as a security to an investor, perhaps, to a pension fund or insurance company.

The bank collects the fees, tracks the payments and wipes the loan off its books to make room for more loans.

The investment firm makes a profit on the difference between the purchase and the sale price of the security, and the investor gains the cash flow from the loans.

Salomon Brothers purchased the car loans from Marine Midland Consumer Credit Corp., the auto-related financial services subsidiary of Marine Midland, which is the largest bank financer of autos in New York State.

The investment firm then pooled the loans and structured them into instruments called CARs (Certificates of Automobile Receivables), which carry a guaranteed yield to the investor. The yield is based on a markup over the yield curve on government securities, such as U.S. Treasury bills of comparable terms.

Marine Midland will continue to service the pool of about 4,000 loans, which were originated through nearly 1,000 New York State auto dealers in the bank's indirect dealer financing program.

Banking experts expect an explosion in the secondary financing market in the next few years. They believe secondary markets will develop in nearly every segment of consumer and commercial loans—from student loans and credit card billings to corporate loans.

Reich said Marine Midland may sell up to $100 million of the new securities this year.

At the present, the new securities are not rated by Standard & Poor's Corp. or Moody's Investors Service, Inc. However, Reich said Marine Midland is working on a second similar transaction which it will request to have rated by the services.

Help for figuring trade deficit

LOS ANGELES.—One of the things that makes Ford Motor Co.'s former chairman Philip Caldwell hot under the collar is the record high international trade deficit that was about $125 billion last year.

He says it is well over double the record set in 1983 and up nearly five times, or $100 billion, from 1980. He continually speaks out on the subject.

But at the press preview of Ford Taurus and Mercury Sable here, a souvenir given guests was a vinyl paperwork organizer with calculator and little pockets for cards and notes. Tucked way back in the rear was a little white tag with orange print reading "Made in China." The calculator was made in Taiwan.

Congressman is loyal customer

Rep. Marty Russo, Illinois Democrat, accepts keys to a 1985 Pontiac 6000 STE from Don Bovino, general manager of Community Motors, Oak Forest, Ill. Over the past 17 years, Russo has purchased 23 vehicles from Community Motors. Also pictured is Jon Crandell, Pontiac's Chicago district sales manager.

MCI Digital questions Doyle bond program

Mail firm may sue sales promoter

By John A. Russell
New York Staff Writer

NEW YORK.—MCI Digital Information Services Corp., a major electronic mail company, is contemplating legal action against Automotive Marketing Group, Inc., a dealer sales promotion company in West Bloomfield, Mich.

The promotion company is headed by Dennis A. Doyle, who has been involved in selling promotional programs to auto dealers for several years.

MCI Digital said it was bilked of more than $50,000 in a scheme involving direct mail and Treasury bonds in dealer promotions.

At least one dealer, John Gambino, of Rainbow Ford-Lincoln-Mercury, Niagara Falls, is also planning to file postal complaints against the promotion company.

A source at MCI estimated that at least 50 dealers may have problems with Doyle's company.

Accusations against the promotion company and Doyle center on promotions he offered to dealers in which he allegedly reneged on a key element—providing $1,000 Treasury bonds, paid for by dealers, to be delivered as gifts to new-car buyers at the dealerships.

Doyle did not return telephone calls from Automotive News.

A source at MCI said Doyle told dealers that if they did not sell a certain number of cars, they did not have to pay. The mailing company was unaware of this and was not paid for services rendered amounting to more than $50,000.

MCI has refused to provide further services for Doyle.

The brokerage firm of Merrill Lynch, Pierce, Fenner & Smith is also angry with Doyle.

The Gambino situation was cited as an illustration of Doyle's activities. According to Gambino, Doyle's company was to mail 100 invitations a day for one month to a list of prospective customers.

According to material sent to Gambino, the prospect was invited to come to the dealership within a 10-day period and ask for a particular person. If the prospect bought a car, the material said, he or she would receive a $1,000 Treasury bond.

Gambino paid Doyle for 25 bonds at $100 per bond as well as the $1,995 basic charge for the mailings per dealership. (Gambino has two.)

Doyle did the mailings. But he subsequently wrote to the new-car buyers, claiming that under Michigan law at the time, the Zero Coupon Bonds, known as TIGR bonds, were not permitted to be offered as part of any promotion.

In the letter, Doyle said that he had transferred the account from the Michigan office of Merrill Lynch to an office in New Jersey and that the customers would receive the bonds within 30 days.

The bonds were never delivered.

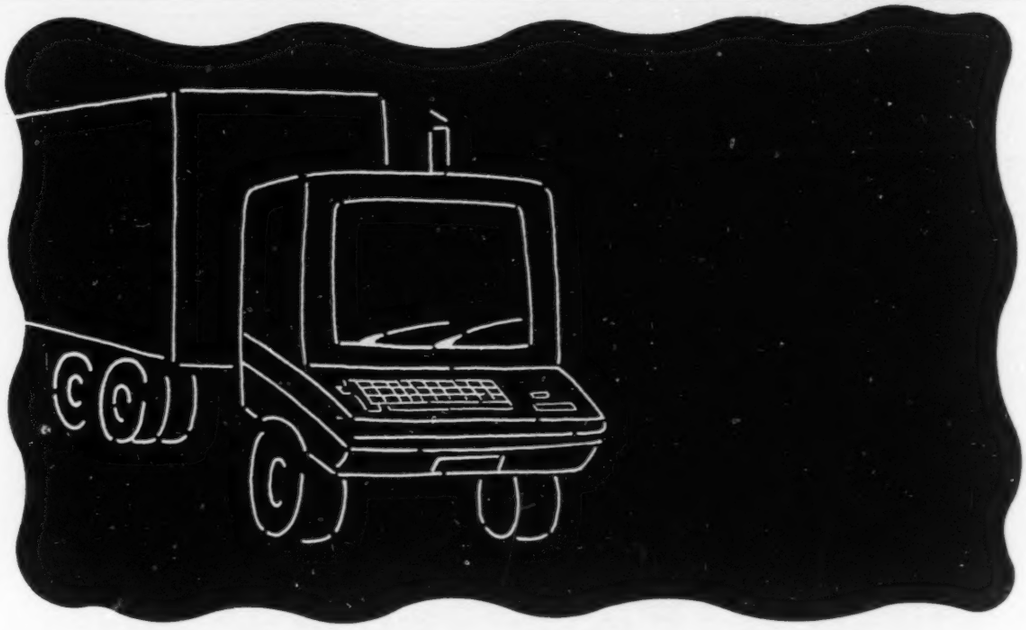
It is not known whether Doyle actually placed his business with one of the 21 Merrill Lynch offices in New Jersey.

According to Thomas Mendham, sales manager of the Merrill Lynch office in Southfield, Mich., Doyle purchased some bonds. But when the problem developed with the State of Michigan, he had all the bonds sold, closed his account, and took the proceeds.

Once contacted by Gambino, Mendham said the brokerage firm attempted to reach Doyle, but he did not return telephone calls nor did he answer a letter from Mendham.

Doyle did not return Gambino's calls either.

According to Automotive News files, Doyle has been conducting promotions in the auto industry since the 1970s and has been investigated by the IRS.



We make trucks smarter.

Today, more and more truck drivers are becoming part of the computer age. With highly profitable results. Thanks in part to an advanced electronic device built by a company called TRW.

TRW's electronic engine control system precisely regulates road and engine speed. It also works as a cruise control to reduce driver fatigue. What all this means, of course, is economy. The fuel savings could amount to 12,000 free miles for every 100,000 on the road.

TRW. Technology at work to make the payload better over the long haul.

'84 truck tallies exceed 4 million for the first time

Continued from Page 16

of the 147,013 Group 6 tallies in 1978.

The same conditions that caused Group 2 buyers to seek more economical trucks fueled the flight from medium-duty gasoline engines to the heavier, more fuel-efficient Class 7 mid-range diesel trucks. This trend also is expected to continue in spite of the drop in gasoline prices and the more fuel-efficient engines which have come on stream.

In 1984, there were a record 66,674 Class 7 registrations, an increase of 34.9 percent over the previous year's 49,426. The total also was 71 percent higher than the 38,996 units registered in 1978 and 40.9 percent greater than the 47,315 tallied in 1979.

Group 8 registrations last year totaled 130,142 units, a gain of 62.7 percent over the year-earlier 80,012. The count, however, was 14.9 percent below the 1978 total of 152,841 and 21.5 percent below the 165,859 units registered five years earlier.

Part of $5 million campaign

AMC Buyer's Guide sparks big ad push

By Joseph Bohn
Marketing Editor

American Motors has put together a $5 million TV/print effort that features all its products in a "Buyer's Guide."

The 16-page guide, AMC's largest multipage print unit to date, will appear in four major news weeklies and a fifth national magazine. It's part of a broader mid-winter/spring effort which features other new ads for Renault and Jeep and a first-time run at the college youth market.

AMC officials cited various reasons for the "Buyer's Guide," including a need to create awareness for the full lineup of AMC products to get purchase consideration.

"We know from research that Renault buyers are great shoppers. If we can get them in the door, we have a good chance to sell them," said David Kerr, director of advertising and marketing planning.

He also cited a "marketing need" to tell consumers that AMC is a full-line manufacturer, or "orienting people to what AMC is today with the new products we've had in the last couple of years."

Renault, particularly, still lacks widespread awareness.

"As AMC progresses, and with all the new products we have coming, we'll have an even greater problem convincing people of everything AMC has on the floor," Kerr added.

As part of its Buyer's Guide effort, AMC is highlighting its 1986 Comanche compact pickup in national ads for the first time. Officials also cited the new Alpine rear-engine sports car, due next year, and the mid-size car slated for 1987-model production at Kenosha as examples of future products.

But, more immediately, AMC is challenging consumers to compare.

"A buyer's challenge," says the opening headline of the 16-page ad, "To find the automobile right for you."

In subsequent pages, AMC compares such cars as the Renault Alliance with the Toyota Corolla Deluxe four-door and Plymouth Horizon SE, the Renault Fuego with the Volkswagen Scirroco and the Ford Mustang and the Jeep Cherokee with the Chevrolet S-10 Blazer and Ford Bronco II.

The guide runs in Time, Newsweek, U.S. News and Sports Illustrated, plus Consumers Digest, beginning with Feb. 18 issues of some of the publications.

There are also 40 TV spots on the three major networks which call attention to the print ad and repeat some of the print comparisons.

AMC also received magazine concessions, wherein four of the publications are running announcements of the print effort in Automotive News, and the fifth is running an announcement in its own publication.

Additionally, magazines are placing posters at airport terminals, commuter stations and the like to herald the ads, and each of the five is sending the ad issue to all AMC dealers.

Kerr called the effort, which he valued at $5 million, "just a new way to spend our money."

AMC dealer associations, if they pick up the factory ads or ones specially prepared for them, will get 50 percent of the costs on co-op as well. That could lend an additional $1 million in support to the effort, Kerr added.

AMC still has its 8.5 percent finance offer running through Feb. 28, and it is adding a special page in newsweeklies to highlight it. Officials haven't decided to extend it, but are likely to in view of competitive developments last week.

Meanwhile, Renault is using "little things" like childproof locks, rear-seat heating and sentry systems to "expand buyer consideration" and help sell its upgraded models, said Marvin Klein, Renault ad manager.

It has a new series of "symphony" commercials in which a pair of robotic conductor arms point out and leads the orchestration of the "symphony of features" to a concluding clap of six sets of robot hands.

The 30-second version runs on network, and a 60-second spot runs on cable.

AMC is making its first run at college campuses, with an ad program that initially runs in two publications, Ampersand and the college Directory of Classes. During the year, eight million students will be reached, Klein said.

It is also producing a vacation guide for students which will be distributed in 25 college newspapers. On some campuses, AMC is also sponsoring free "one to watch" old movies for students. It is working with Alan Weston, a California-based college marketing company, on the project.

Meanwhile, there are new Jeep Cherokee commercials, designed to highlight its superiority over competitors like S-10 Blazer.

The spots talk about such things as Cherokee winning all three offroad magazine 4WD awards last year and a free sunroof for buyers of the 2.5-liter 4-cylinder Cherokees, plus traditional things like roominess and cargo space.

AMC erected a giant TV screen in the desert, which the Cherokee crashes through for dramatic visual effect.

It also plans an eight-page Jeep spread for April issues of enthusiast publications which presents the full array of Jeep products. "There's a feeling you can get. Only in a Jeep" is the headline.

Comparative specificiations, which Kerr called "more meaningful to enthusiast buyers," are part of the pitch for Cherokee, the J-20 pickup and the Jeep Wagoneer Limited four-door. Comanche is featured on the back page. CJ and Eagle are included in the multi-page ad. Performance and technology are a strong part of the overall message.

There is a new Wagoneer ad which says "Our competition leaves you but one choice—Jeep Wagoneer" which positions it in an upscale setting.

A new testimonial ad for Grand Wagoneer by Bruce Nelsen, a boat designer, says, "Jeep designed the Grand Wagoneer like I designed every ocean racer that comes off my drawing board—to be a winner."

CJ continues its emotional "Only a Jeep" pitch, with outdoor art and no copy.

Eagle targets women, particularly with "When nature makes it snow or rain, fight back. Make it Eagle."

Compton Advertising handled the print on the Buyer's Guide, and Grey Advertising the TV. Grey does all AMC's dealer association ads. Compton handled all the Jeep ads.

Volvo profits double for 1984, but sales decline

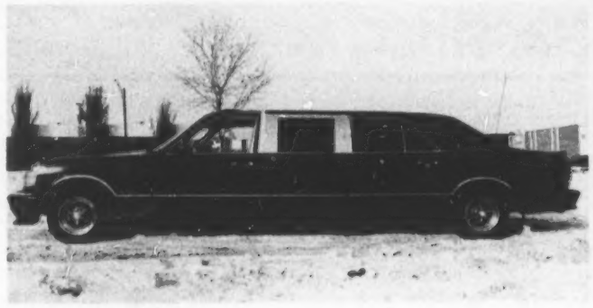
GOTHENBURG, Sweden.—Volvo reported it doubled its income in 1984, though sales were lower than those in the previous year.

Unaudited figures show Volvo, an automotive and energy company, earned $849 million based on the exchange rate at year-end, on sales of $9.708 billion, compared with $421 million on sales of $11.073 billion last year.

Volvo said its board of directors intended to propose a dividend increase at the annual meeting. Under a new law temporarily prohibiting Swedish companies from raising dividends, the highest permissible amount that Volvo can pay is the equivalent of 59 cents per share.

The company, however, said that its financial position and earnings warrant a dividend considerably higher than what is legally permitted.

Volvo said the improvement in income reflected improved earnings in the car and truck sectors as well as a substanially lower loss in its energy sector. The company attributed the decrease in total sales, in part, to cutbacks in oil trading.



Rolling love seat

This Mercedes-Benz 300-SD limo by Tony's Limousine, Inc., Warren, Mich., features a love seat which folds into a bed, two sunroofs, a 12-inch remote control TV with VCR, cassette stereo, indirect lighting, double divider window, intercom, CB, telephone, AMG spoilers and skirts, wire wheels and tinted glass. Retail price: $80,000.

SAE meeting provides industry/government forum

WARRENDALE, Pa.—Fostering joint consideration of technical problems and issues between governments and industry is the goal of the Second SAE Government/Industry Meeting and Exposition, slated for May 20-23 in Arlington, Va.

The meeting will feature as many as 60 technical sessions on topics ranging from acid rain's relationship to mobile source emissions to military vehicle warranty guidance, according to SAE.

Generally, sessions will fall under five major topic areas: Highway vehicles, military vehicles, marine technology with an emphasis on marine power plants, railroad technology and multimodal transportation issues.

As a bonus, a separate conference on Aerospace Requirements will be held in conjunction with the meeting.

"We were delighted with the response to last year's first Government/Industry Meeting," said General Chairman Howard Dugoff, science and technology advisor to the U.S. secretary of transportation.

"There were standing-room-only crowds at many sessions. That showed us that there is a strong need for a forum like this where industry and government can deal with technical issues in a non-adversarial climate," he said.

A partial list of this year's sessions includes: In-Use Emissions and How Best to Control Them; EPA Inspection/Maintenance Status; CAFE Standards—Are They Needed?; Programs to Increase Safety-Belt Use, and Heavy Truck Safety Considerations.

More are: Crashworthiness—Have We Reached the Limit?; Adaptive Equipment for Handicapped People; The Gray Market; Tank Systems Update; The Bradley Fighting Vehicle; Marine Fuels and Lubricants, and the National Transportation Safety Board—Its Effectiveness.

Leaders of the Japanese and European governments are expected to participate.

Planned with this event is an engineering exposition of new developments related to the technical sessions.

73 percent in survey drive domestic autos

Small-firm execs pick U.S. cars

NEW YORK.—When the nation's small-business executives go shopping for new cars, the "buy American" credo figures strongly in their purchasing decisions, according to a survey by D & B Reports magazine.

The survey results showed a strong preference for the domestic labels: 73 percent of the respondents said they drive an American-made car for business, while 27 percent of those surveyed reported a preference for foreign-made automobiles.

D & B Reports, Dun & Bradstreet's magazine for small-business management, received 1,752 responses to its survey out of 8,409 questionnaires mailed to its subscribers who are small-business presidents and other top executives.

While foreign cars remain a strong force in some affluent areas of the U.S., such as Westchester County, N.Y., where imports accounted for 35.5 percent of new registrations in the first nine months of 1984, the national rate for foreign-car registrations is about 25 percent.

Those surveyed by D & B Reports in service-sector businesses showed more of a preference for foreign cars than those in manufacturing, wholesaling and retailing. About 31 percent of those in services said they owned or leased foreign automobiles for business use.

The D & B Reports survey showed that General Motors won by a landslide. Among the cars most preferred by small-business executives, GM-built autos placed first, second, third, fifth and sixth. Ford placed fourth.

Oldsmobile was the No. 1 make among the small-business owners, followed by Chevrolet, Buick, Ford, Cadillac and Pontiac.

Mercedes-Benz, which small-business owners said they purchased for prestige, quality, service and resale value, came in seventh. Toyota and Nissan tied for eighth, Lincoln came in ninth; Honda was 10th.

The majority of the respondents, or 927 people, said they owned their business cars, while company-owned cars placed second (510 respondents). Only 12 percent, or 216 people, said they leased their company cars.

Trade groups to help firms exhibit at overseas shows

MUNCIE, Ind.— The Motor and Equipment Manufacturers Assn., the Automotive Service Industry Assn. and the Overseas Automotive Club have formed a working relationship to represent and serve U.S. manufacturer suppliers at overseas trade shows and related events.

The first activity this year will be Autovac in Amsterdam, March 25-29. The associations will arrange and sponsor a U.S. pavilion for manufacturers who wish to exhibit at the show.

In September, 1985, a caravan will be available for manufacturers who wish to participate in three consecutive events: The Frankfurt Automobile Show (Sept. 12-22); Autoquip/Garagequip in London (Sept. 22-27), and Equip Auto in Paris (Sept. 27-Oct. 4).

Representation will be provided for participating firms during the days when the shows overlap.

Manufacturers who wish to exhibit in only one or two of the three shows can do so without penalty.

A U.S. pavilion will be available at the Automechanika exposition in 1986. It will be held Sept. 9-14 in Frankfurt.

The three associations formed an international committee composed of industry leaders with extensive experience in international marketing. The committee said it will sponsor joint U.S. pavilions at events that will most benefit U.S. manufacturers, with the goal of increasing industry exports.

The associations also announced that Hall-Erickson, Inc., managing director of The Big I Show held in the U.S. and producer of the U.S. pavilion at Automechanika '84, will serve as pavilion manager and coordinator of future events.

Hall-Erickson will make all necessary arrangements for manufacturers exibiting at a show, providing options such as booth rentals, translators, customs and shipping arrangements and buyer contact materials.

Midland-Ross plans to sell two divisions

CLEVELAND.—Midland-Ross Corp. plans to sells its National Castings and Bay City Foundry divisions as part of its strategy to concentrate on markets offering greater, more consistent growth.

The result will be an after-tax provision of about $51 million, or $4 share, against 1984 earnings, the company said, but the impact on cash flow in the near-term is expected to be favorable because of the sales proceeds and tax benefits gained.

Combined sales for the two divisions amounted to about $80 million in 1984.

Chairman Harry J. Bolwell said the divisions will be operated until they are sold, though they will be listed as discontinued operations for financial reporting purposes.

Bolwell said the corporate strategy will continue to be to expand and develop the aerospace, electronics, electrical and thermal systems businesses. He projected annual growth in the electronics and aerospace sectors to be 16 and 13 percent, respectively, over the next five years.

Exclusive Subaru deal opens in Roanoke

Attending the ribbon-cutting for Valley Motorsport, Inc., Roanoke, Va., are, from left: Subaru Atlantic, Inc.'s Paul Hudson,service manager; Jim Miller, sales manager; John Coyle, vice president and general manager; Valley Motorsport's Mark Hancock, president; James Douthat, partner and secretary, and Subaru's Robert Brodeur, parts manager.

Subaru exclusive opens, another grows in Roanoke

ROANOKE, Va.—Subaru Atlantic, Inc., celebrated a double grand opening here.

Mark Hancock, president of Valley Motorsport, Inc., announced the opening of a 12,000-square-foot exclusive Subaru facility with a 4,000-square-foot showroom.

The new dealership is situated on 3½ acres of land.

Barney Rosalia, president of Rose Motors, Ltd., announced a 2,350-square-foot dealership expansion which includes a 1,300-square-foot exclusive Subaru showroom.

Subaru Atlantic management participating in both ribbon-cutting ceremonies were: John J. Coyle, vice president and general manager; Jim Miller, sales manager; Paul Hudson, service manager; Robert Brodeur, parts manager, and Harold Gill, market development manager.

James F. Douthat, partner and secretary of Valley Motorsport, and Jack Hobbs, general sales manager of Rose Motors, also attended the ceremonies.

Rose Motors expands in Roanoke

Celebrating the grand opening of Rose Motors, Ltd.'s dealership expansion in Roanoke, Va., are, from left: Paul Hudson, Subaru Atlantic, Inc., service manager; Rose Motors General Sales Manager Jack Hobbs and President Barney Rosalia; and Subaru's John Coyle, vice president and general manager; Jim Miller, sales manager, and Robert Brodeur, parts manager.

Auto salesman understands his deaf-mute customers

By Sanford Markey
Staff Correspondent

MENTOR, O.—Kenneth Opatrny is a car salesman who uses sign language to communicate with deaf customers and make their automotive shopping more comfortable.

Opatrny, 24, has been with Classic Chevrolet for four years. His parents are deaf-mutes. He encountered a deaf-mute having problems trying to communicate during a sales presentation and, with his help, the sale was made.

Having learned sign language in dealing with his parents, Opatrny understands "the humiliation these people undergo trying to communicate with those who do not know the sign language. I saw this when my father, for example, took me to school and had to communicate with the teacher. I've seen it happen when they must write everything when they have to make a purchase."

He mentioned other examples: "Try to explain to a service manager what's wrong with your car when you have to write it all out. Try to ask questions about a warranty when buying a new car, or ask about extras. Deaf-mutes are on the defensive in these cases.

"I like selling cars," he said, "but it is so much more meaningful when what you do helps people. It is so much more rewarding."

To help deal with deaf-mutes, the dealership has installed a special TTY, a small electronic telephone attachment that receives and transmits messages to potential customers. Contacts and appointments can be made both for new-car sales and service.

Sending a message

Salesman Ken Opatrny, Classic Chevrolet, Mentor, O., prepares to send a message to a deaf-mute customer on the dealership's TTY phone.

Makers build 169,851 for week

Better weather hikes car output

By Louise Kertesz
Detroit Reporter

Last week's scheduled domestic output of 169,851 cars was 15.63 percent more than the 146,886 built the previous week, when bad weather caused actual production to fall some 27,000 units short of makers' targets.

Last week's output was about even (up 0.74 percent) with the year-ago week's 168,610.

The previous week's production was the lowest for a regular work week since the 144,506 units built during the week ended Oct. 27.

Somewhat lower schedules last week, along with the prior week's shortfall (compared with a healthy output of 178,218 units for the corresponding week a year ago), have eroded this year's early production lead over 1984.

This year's pace—1,297,682 cars completed so far—is now just about even with the 1,297,575 assembled last year at this point.

Companies shared last week's scheduled production as follows: GM, 61.07 percent; Ford, 20.94 percent; Chrysler Corp., 14.66 percent; American Honda, 2.13 percent; Volkswagen of America, 1.18 percent, and New United Motor Mfg., Inc., 0.02 percent.

Chrysler's Sterling Heights (Mich.) plant, which produces the Dodge Lancer and Chrysler LeBaron GTS, is starting its second shift this week (Feb. 25). Some 1,900 hourly workers will be added to the payroll.

GM scheduled two overtime shifts Saturday (Feb. 23) at the following plants: Pontiac G-line, Lansing (Oldsmobile No. 1), Fairfax (Kans.), Lakewood (Ga.), Linden (N.J.), Norwood (O.), Oklahoma City and Wilmington (Del.).

One overtime shift was scheduled Saturday at GM plants in Arlington, Tex., and Wentzville, Mo.

Honda scheduled Saturday overtime at its plant in Marysville, O., and the plant worked two overtime hours once last week.

Ford has scheduled overtime at all its car plants this week.

Chrysler's Jefferson (Detroit) plant is also scheduled to operate two 8½-hour daily shifts this week.

Chrysler's Newark (Del.) and St. Louis (No. 2) plants are each slated to operate two nine-hour daily shifts this week.

DiMora planning to add lower-priced Clenet model

By Matt DeLorenzo
Los Angeles Reporter

CARPINTERIA, Calif.—Clenet Coachworks, which has resumed production under new ownership, is planning to add a third model to its line this summer, according to Al DiMora, president of the firm.

After nine months of operation, the revitalized company is building six to eight cars a month with 55 employes. It has about 24 cars in various stages of production at the 40,000-square-foot facility here.

The new model, which DiMora tentatively calls Series IV, will be slightly shorter than the current Series III and will more closely resemble the Series I car that launched Alain Clenet's car company.

The new car will also be the least expensive model in the new company's line, starting at about $65,000. DiMora said he wants to have models in the $60,000, $80,000 and $100,000 price ranges.

Currently, DiMora is offering the Series II model at $98,000 and the Series III at prices ranging from $78,500 to $82,500. He added that he intends to complete the original production run goal of 500 each in Series II and Series III before retiring the designs.

DiMora also announced a new management team: Kirk Aylesworth, director of materials; Cal Don Caylor, director of finance; John DiMora, director of sales; Jay Kuehnle, director of manufacturing; Louise Ann Noeth, director of public relations, and Paula Stetler, director of marketing.

Dina producing Cummins diesel for trucks, buses

MEXICO CITY.—Diesel Nacional (Dina) has begun production of Cummins V-8 Big Cam diesel engines of 210 HP. The engines use diesel fuel with a low sulphur content.

Initially, the engines will be used in buses but will be installed later in cargo transport units.

According to Dina, the Big Cam is 24 percent more powerful than older engines of similar horsepower. Fuel economy is 19 percent better and noise has been reduced 7 percent, Dina said. With better use of fuel, the emissions level also is lower, the company said.

Dina reported that production of the new engine in 1984 was slightly less than 1,000 units, but this is to be expanded this year.

Truck production rises for week; 67,355 scheduled

U.S. makers expected to build 67,355 trucks last week, a bit more (1.79 percent) than the 66,172 completed the previous week, and 8.76 percent more than the 61,928 assembled during the year-ago week.

Actual production for the previous week fell some 4,000 units short of makers' estimates, and the weekly production record for the year was not reached as targeted.

Year-to-date, 499,121 trucks have been completed, an increase of 4.49 percent over the 477,643 built a year ago at this time.

General Motors scheduled two overtime shifts Saturday (Feb. 23) at its plants in Pontiac (No. 5) and Shreveport, La.

Saturday overtime was also scheduled at Ford Motor Co.'s Kansas City plant.

Ford has scheduled daily overtime at all its plants this week.

Week's output of cars slips in Canadian plants

With 19,087 units scheduled for completion, last week's Canadian car production was the second lowest for a full work week this year.

American Motors' closing of its Brampton (Ont.) plant for a week for inventory adjustment and lower production targets across the board resulted in the slowdown.

Last week's output was down a bit (1.77 percent) from the previous week's 19,431 and was 18.41 percent lower than the year-ago week's 23,317.

So far this year, 150,418 cars have been assembled, 10.12 percent less than the 167,352 completed last year at this point.

Makers targeted assembly of 18,704 trucks last week, 25.71 percent more than the 14,879 completed the previous week, when Chrysler Corp.'s Windsor (Ont.) plant lost production of some 3,300 units because of bad weather.

Last week's output was up 3.36 percent from the year-ago week's 18,096.

So far this year, 136,095 trucks have been built, 6.10 percent more than the 128,274 completed last year at this point.

At Chrysler's Windsor facility, 2,604 Plymouth Voyagers, 2,718 Dodge Caravans and 594 Mini Ram Vans were assembled, bringing the T-115 total for the year to 42,940.

Major advances expected at home and in export market

Korean auto industry gears for boom times

EDITOR'S NOTE: *Staff Correspondent John Hartley has just returned from an extensive tour of the Korean auto industry. The first of a series of reports follows:*

By John Hartley
Staff Correspondent

SEOUL, Korea.—Barring an economic recession, the Korean auto industry seems set for strong growth fueled by exports.

Last year, 263,000 vehicles were produced in the Republic of Korea and this year output should comfortably exceed 300,000.

Led by the aggressive Hyundai Motors, part of a large engineering group which first made its mark in shipbuilding, the industry had built production up to well over 200,000 units in 1979. Then came the second energy crisis and sales crashed, exposing the weakness of an industry devoted entirely to the domestic market.

To help the car makers regain their strength, the military government forced the industry to rationalize. Initially, the government wanted Hyundai and Daewoo to merge, but the fact that General Motors owned 50 percent of Daewoo Motors—then Saehan Motors—forced the government to reconsider. In any event, Hyundai and Daewoo were banned from the production of light vans and trucks in the 1- to 5-tonne payload class.

Kia Industries was given the mandate to build such vans and trucks, but had to give up making the antiquated Briza, a Mazda GLC about 10 years out of date.

After that retrenchment, the market gradually recovered, so that last year production records were broken. In all, 263,000 vehicles were built, of which 50,000 were exported, and the big difference between the 1970s and the 1980s is that volume of exports. If the industry's new projects succeed, exports could form the hard, profitable core of the industry in the 1990s.

Hyundai has always been the driving force of the Korean auto industry, building a plant from scratch in the mid-1970s with a capacity of about 140,000 cars a year when demand was minuscule. Last year, it produced 139,000 vehicles and continued to take the lion's share of the domestic market, with registrations of 56,000 Ponys, 16,900 Stellars and almost 20,000 Pony trucks.

In addition, Hyundai exported over 12,000 Stellars, about 36,000 Ponys and a few trucks. In 1983, it produced 108,000 vehicles, of which 18,500 were exported, so

A blend of the old and new

Korea's capital city, Seoul, has plenty of wide streets, scattered traffic, new buildings and sections of the old city wall.

He cites health of U.S. industry

Reagan to let VRA die

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Four years of U.S. Government-backed restrictions on Japanese car exports to this country will end March 31, President Reagan decided late last week.

A White House spokesman said the President had decided not to ask the Japanese for an extension of the Voluntary Restraint Agreement of Japanese autos in light of the healthy performance of the American auto industry and in hopes the Japanese would respond with "reciprocal" treatment in their acceptance of American exports.

The White House spokesman said the President made his decision in the interest of "free and fair trade" for the world's consumers.

Earlier last week, Chrysler Corp. Chairman Lee Iacocca sent word to the House Ways and Means Trade Subcommittee that "in a matter of days, Chrysler will be confirming to its Japanese partner, Mitsubishi Motors Corp., that we will require up to an additional 200,000 small Mitsubishi cars a year from Japan, in addition to the 87,500 per year we currently import."

The message was delivered by Robert S. Miller, Chrysler executive vice president for finance and administration. "In other words," Miller said, "we are preparing to roughly triple our imports of built-up Japanese cars.

"Chrysler has a strong, 15-year relationship with Mitsubishi. We already have port facilities, warranty agreements and a parts and service network. And our entire dealer network is familiar with Mitsubishi's products so, in essence, all we have to do is turn up the spigot," Miller said.

Earlier last month, Chrysler told congressional leaders that its decision on building an American P-car replacement for the Omni/Horizon subcompact hinged on whether the VRA is continued for a fifth year.

Even before Mr. Reagan's announcement last week, a Chrysler spokesman said the board of directors now assumes the VRA is "dead" and that "we want our share of the trade deficit, the same as General Motors."

The Chrysler spokesman also said that if the Japanese act to restrain vehicle exports to the U.S. on their own initiative, Chrysler will expect to get its share of vehicles, just as GM wants a share

28,000 attend Detroit exposition

Technology stars at SAE show

By Roger Rowand
Engineering Editor

The SAE show in Detroit last week notched near-record attendance, a record high number of exhibitors and a staggering volume of technical presentations.

Some 28,000 attended the 1985 SAE International Congress and Exposition at Cobo Hall during an unseasonable spell of relatively warm, storm-free weather.

If head-in-the-door surveys, show-floor talks and nose-count asessments are valid, technical interest was highest in an odd mix of areas that ranged from safety to adhesives and electronics.

Safety sessions were better attended than in recent years. Those sessions covered such topics as accident simulation and the use of computer graphics in crash reconstruction.

Also rating high in attendance were the class-like meetings on joining techniques, electronic engine controls and testing and, of course, materials.

Adhesive bonding of steel parts and aluminum parts captured strong attention among the engineers who came from around the world. A strong degree of interest was obvious in techniques under development for using chemicals in bonding steel to aluminum and both those metals to plastic composites.

Electronics sessions and the displays featuring electronics products also held strong attraction. If an exhibit included a keyboard, a tube and a chair, the chances are it was in use much of the time.

Engineers seemed lured by electronics testing equipment, particularly engine analyzers.

Materials and their selection and processing normally capture a major share of the limelight during the SAE Show and the same held true this year.

The Aluminum Assn. used the show to describe how its lightweight, no-rust metal is moving strongly into a growing range of applications. Those include such major items as wheels, drive-

Subaru's new aero-designed XT Coupe

The four-wheel-drive Turbo is the top model of Subaru's new XT Coupe line. The car, a design departure for Subaru, features height-adjustable air suspension, fuel-injected and water-cooled turbocharged horizontally opposed engine and luxury interior with three-dimension digital instrument panel. Story, other picture are on Page 48.

breaking news

Chrysler cuts lease rate

HIGHLAND PARK.—Chrysler Credit during March 1-April 30 is offering special below-market "Gold Key Preferred Customer" lease rates of up to 48 months which, it told dealers, would save customers $900 on a typically equipped Chrysler Fifth Avenue or Diplomat and $800 on New Yorker and Dodge 600 models. The lease rates cover Fifth Avenue, E-Class New Yorker, Caravelle, Dodge 600, LeBaron GTS, Lancer, convertible LeBaron and Dodge 600, Plymouth Gran Fury, Dodge Diplomat and Caravan/Voyager. A customer who has a $500 "Thank You, America" certificate can also apply it toward these leases.

Chevy offers demo program

WARREN, Mich.—Chevrolet is signing up salespeople during March for a demonstrator incentive on Celebrity/Cavalier, running April 1-May 31. Salesmen get $25 gift certificates for every eight demo rides they give on these models. Sales managers qualify for $1,000 first-place or $500 second-place gift certificate drawings for every form with eight demo names they submit. Dealers split $25 cost with the factory.

NEWSPAPER

But 4th quarter trails 1983

First full-year profit since 1979 for AMC

American Motors showed a profit of $15.5 million for 1984, its first full-year profit since 1979, though profits for the fourth quarter of the year were down dramatically from the fourth quarter of 1983.

The $15.5-million profit for 1984 compares with a $146-million in 1983, which included a $4.5 million tax loss carryforward from previous years when AMC did not make a profit. The 1984 results also include a $5.4-million provision for AMC's employe investment plans' profit-sharing formula.

Sales for the year amounted to $4.2 billion, up 29 percent from $3.3 billion in 1983.

Capital spending for 1984 amounted to $217 million and is expected to increase in 1985, as the company is in the middle of a five-year expansion project.

For the fourth quarter of 1984, AMC's profits were $3.1 million, down 58 percent from $7.4 million in the same quarter the previous year. A $1.7-million tax loss carryforward was included in fourth-quarter results.

Sales for the quarter were $1.1 billion, virtually the same as in the comparable 1983 period.

In 1984, worldwide car and Jeep sales were 442,383 units, up from 383,462 in 1983. Automobile sales were 248,955 units, down from 270,019 in 1983, while Jeep sales were 193,426, up from 113,443.

For the quarter, worldwide sales were 103,133 units, down from 119,221 a year earlier. Automobile sales totaled 55,210 units, down from 72,475 a year ago. Jeep sales were 47,923, compared with 46,746 in 1983.

Jeep sales have been strong enough to warrant increasing production at the Toledo plant by 80 vehicles per day to a daily rate of 824 units, AMC President Jose J. Dedeurwaerder said in announcing the financial results.

However, with automobile sales sagging, AMC said it would extend for another month its 8.5-percent financing program to buyers of Renault Alliance, Encore, Sportwagon and Fuego.

Lancia's new rally weapon

Lancia's Delta S4 rally car has a 1,750-cc, four-cylinder, 16-valve engine which delivers 400 HP. The bodywork, which resembles that of the Delta, is laid on a light alloy tubular frame. The car has four-wheel drive.

Programs spread on small vehicles

AMC extends 8.5 pct. car loans

By Joseph Bohn
Marketing Editor

Low-interest financing is becoming an increasingly popular way to sell small cars.

American Motors is the latest to expand and extend 8.5 percent financing on a number of small-car lines.

AMC is offering 8.5 percent APR financing Renault Alliance, Encore, Sportwagon and Fuego models delivered through March 31.

The 8.5 percent is available on contracts up to 36 months; 9.5 percent is avaiable on 37-to-42-month contracts and 10.5 percent on 43-to-48-month contracts.

AMC previously offered low-interest financing on Alliance and Encore under programs that were due to expire Feb. 28. Fuego and Sportwagon are new to the program.

Joseph E. Cappy, AMC group vice president—sales and marketing, said that on a $7,000 loan, buyers save $535 with the 8.5 percent rate compared with the more normal 13 percent rate offered by financial institutions.

AMC's move was fairly predictable after both Chrysler Corp.and Ford Motor Co. kicked off low-interest finance programs of their own

Ford is offering 8.8 percent financing through Ford Motor Credit from Feb. 22 to April 22 on Tempo and Topaz compact cars. Contracts can run from 12 to 60 months. On cars not bought out of stock, orders must be received by Ford no later than March 25 to qualify for the low-interest loans.

The finance reserve for recourse dealers is 1.1614 percent and for non-recourse, 0.714 percent. With full recourse, the dealer picks up the vehicle if the buyer defaults on the loan and with non-recourse the lending institution is responsible for defaults.

Ford is also offering 8.8 percent financing on Ranger pickup trucks from Feb. 5 to March 31, and General Motors is offering 8.8 percent on its S-10 and S-15 pickups from Feb. 1 to March 31.

Chrysler is offering 8.8 percent financing on Omni/Horizon, Turismo/Charger and Laser/Daytona from Feb. 14 to April 30, as part of a five-pronged marketing program that also includes rebates on cars and trucks, automatic transmission giveaways and dealer trip contests.

Ford Division also launched a recent cash program for salespeople on 1984-85 F-150 full-sized pickup trucks equipped with manual transmissions. Under the program, which runs from Feb. 22 to April 22, sales people qualify for payments of $75, $100, $300 or $500 for each unit they retail, based on a randomly selected computer drawing.

Dealers contribute a non-refundable $25 per unit toward the cost of this program.

Chrysler near deal with Lotus on engine work

Chrysler Corp. is near finalization of a deal for advanced engine engineering with Group Lotus, according to Chrysler insiders. The agreement would add the prominent British engineering company to Chrysler's growing stable of outside support.

Toyota Motor Co., Ltd., owns 16.5 percent of Lotus and has been using Lotus engine expertise in advanced, high-output powerplants.

Chrysler considered West Germany's Porsche A.G. and Chrysler's Italian affiliate, Officini Alfieri Maserati S.p.A., before selecting Lotus.

Chrysler earlier had been talking to Maserati about a high-output, 3-cylinder multivalve engine suitable for both small cars and performance vehicles.

The new Lotus project is likely to concentrate on similar small-displacement engines, although Lotus recently unveiled a new high-output V-8 engine in England and has been looking for a U.S. customer for the engine.

Lotus also has considerable background in composite structures for cars.

—DAN MC COSH

Walsh and Bohn reassigned by Automotive News

Reassignment of two veteran Automotive News staff members has been announced by Robert M. Lienert, editor.

Jack Walsh has been named service editor, succeeding Francis J. Gawronski, who earlier was appointed Automotive News bureau chief in Tokyo. Walsh plans to retire at year-end.

Joseph J. Bohn will succeed Walsh as truck and recreation vehicle editor.

"The reassignments are intended to bring fresh approaches and new insights into coverage of these areas," Lienert said. "The changes are part of our continuing effort to upgrade our coverage of the industry."

Walsh has been with Automotive News since 1957. He first became service editor in 1969 and has been truck editor since 1971. He holds an AB degree from Syracuse University.

Bohn, who joined Automotive News in 1970, has served as marketing editor since 1977. He has a BA degree from Michigan State University and an MA from Wayne State University.

Jack Walsh

Joseph J. Bohn

Hanon remains on AMC board; but for how long?

Although he was ousted as head of the Renault Group earlier this year, Bernard Hanon remains a member of the American Motors board of directors.

Hanon was in Detroit Feb. 22 for an AMC board meeting, almost a month after he was abruptly fired and Georges Besse was installed as president—director-general of state-owned Renault.

Renault controls 46 percent of AMC and has five seats on AMC's 14-member board. The "Renault-suggested" members of the AMC board include three officers of the French company plus Hanon and New York investment banker Felix Rohatyn.

Besse, who previously chaired another nationalized French concern, is not a member of the American Motors board.

An AMC spokesman last week said Hanon's status relative to American Motors has not changed.

"He is still on the board," said the spokesman. "But you would expect Renault will make some kind of suggestion as to whether he will remain or a change will be made."

Any shift in Renault's board representation would likely be made at American Motors' annual meeting in April. A proxy statement is due later this month.

—RICHARD JOHNSON

Sales reach 9-year high in mid-Feb.

By Jenny L. King
Detroit Reporter

Sales of domestic new cars in mid-February were the highest for the period in nine years. They squeezed past the year-ago number by 3,500 units and pushed the year-to-date figure past the one-million mark.

The total for Feb. 11-20 was 228,761, up 1.55 percent from 225,260 a year earlier. The current period had the advantage of an extra selling day—nine vs. eight in 1984—and on a daily-rate basis, sales were down 9.73 percent, to an average of 25,418 from 28,158.

Year-to-date sales were 3.19 percent ahead of 1984, adding to 1,022,019 compared with 990,383 a year earlier.

Chrysler Corp. reported the healthiest sales gain among the major auto makers, its mid-February sales up 29.71 percent, to 35,619 from 27,461. Ford Motor Co. also was up, to 60,813 from 53,383, or 13.92 percent.

General Motors reported sales of 124,924, down 7.54 percent from 135,118. Volkswagen sales were up 15.50 percent, to 2,124 from 1,839, while Honda was up 6.30 percent, to 2,481 from 2.334. American Motors' estimated sales of 2,800 for the period were off 45.37 percent from the year-ago 5,125.

GM's share of the mid-month market slipped to 54.61 percent from 59.98 percent last year. Ford claimed 26.58 percent, an increase of nearly three percentage points from 23.70 percent.

Chrysler was up to 15.57 percent from 12.19 percent. AMC was fourth with 1.22 percent, down from 2.28 percent. Honda sales accounted for 1.09 percent of the total, up from 1.03 percent, and VW had 0.93 percent, up from 0.82 percent.

Makes with sales increases were Plymouth, up 51.96 percent; Dodge, up 31.68 percent; Chrysler, up 6.92 percent; Ford, up 14.12 percent; Mercury, up 12.62 percent; Lincoln, up 16.53 percent; VW, up 15.50 percent, and Honda, up 6.30 percent.

Buick sales were up 18.38 percent, to a record 24,077 from 20,338.

GM's other four car divisions were down. Cadillac sales fell 18.93 percent, Chevrolet was down 4.23 percent, Oldsmobile was down 22.21 percent and Pontiac dropped 10.27 percent. American Motors' AMC sales were down an estimated 73.33 percent, and Renault was down 37.50 percent.

Estimate

Pa. governor opposes grants to lure Saturn

HARRISBURG, Pa.—Legislation providing $25 million to lure the Saturn Corp. plant to Pennsylvania has been passed by a vote of 185 to 3 in the state House of Representatives, but Gov. Richard Thornburgh is opposed to the bill.

The money would come from a state surplus and could be used for either grants or loans.

Thornburgh said, "General Motors earned $4.5 billion last year. The notion that we are going to make a difference in their determination about where they locate their new plant by giving them . . . low-intrest loans is not admissible.

Approval of the Democratic-controlled House sent the fund bill to the Republican-controlled Senate."

U-M survey reveals some price resistance, too

Car-buying intentions show a dip

ANN ARBOR, Mich.—Favorable attitudes toward the purchase of a car were held by 55 percent of all families in the fourth quarter, down from 58 percent a year earlier.

Retailing, however, held at a level comparable with the cyclical peak of the late 1970s.

At the same time, some price resistance was noted.

These are among the findings of the latest Survey of Consumer Attitudes by the University of Michigan's Institute for Social Research.

Generally speaking, the survey found that the current financial situation of American families—following the best year of improvement in two decades—indicates that improved consumer spending will continue through late 1985.

In the absence of rising price pressures, the survey showed, buy-in-advance attitudes have been replaced by more attention to price discounts in making purchases. More price resistance and increased comparison shopping can be expected, the ISR said.

The fourth quarter 1984 survey of a nationwide sample of more than 2,000 persons showed the ISR Index of Consumer Sentiment at 95.0, down from 98.9 one quarter earlier and below the cyclical peak of 99.5 recorded in the first quarter of 1984. (February, 1966100.)

"Despite this small year-end decline, the average level of consumer confidence recorded during 1984 was higher than in any year since the late 1960s," said Richard T. Curtin, survey director.

Curtin attributed the year-end decline in consumer sentiment to "the transition from the prolonged enthusiasm which accompanies the rapid recovery to the accustomed awareness of the ongoing economic expansion."

He added, "Thus far, most of the decline has been concentrated in movement from expectations for continued improvement toward the expectation that economic conditions would remain largely unchanged, rather than toward unfavorable expectations.

"Even if there are darkening clouds on the horizon, they are viewed as sufficiently distant so as not to cause concern with prospects in the near term."

The survey found that among all families, 44 percent reported that their financial situation had improved, just below the 45 percent recorded in each of the first three quarters of 1984. By comparison, the 1972 and 1965 peaks (47 percent and 50 percent, respectively) were slightly higher, but sustained for only one quarter each.

Expectations for 1985 financial improvement, expressed by 38 percent of all families, have not been based on higher income expectations, but rather on the expectation that inflation would continue at low levels, ISR said.

Since the financial optimism is based on low rates of inflation and limited income increases, "consumers have adopted a somewhat more cautious outlook toward use of savings or debt to finance major purchases," Curtin said.

The chief concern among consumers appears to be over job prospects. For the first time in two years, the proportion of families (21 percent) that expected a decline in the aggregate unemployement rate fell below the proportion (25 percent) that expected increases in unemployment.

Ford Credit boosts earnings 10th year in row

DEARBORN.—Ford Motor Credit Co. reported record earnings of $310.4 million in 1984, up $18.6 million over the previous record of $291.8 million established a year earlier.

"This favorable performance was Ford Credit's 10th consecutive year of earnings increases," said James W. Ford, chairman.

Ford Credit said it was able to increase its earnings in 1984, despite lower interest margins, because of record levels of vehicle financing. Retail and lease financing was provided for more than 1.1 million vehicles in the U.S., exceeding the one-million level for the second year in a row.

Fourth-quarter profits were $71.3 million, compared with $63.7 million in 1983. At Dec. 31, 1984, receivables totaled $26.6 billion, up $5.6 billion from a year earlier.

Makers schedule 180,205 cars

Auto production best in 5 weeks

By Louise Kertesz
Detroit Reporter

U.S. auto makers scheduled the highest production in five weeks last week, targeting output in the 180,000s for the first time since the week ended Jan. 19.

Last week's estimated build of 180,205 cars was 6.24 percent higher than the previous week's 169,617 and 14.73 percent more than the 157,070 for the year-ago week.

The year-to-date pace of 1,477,653 cars assembled is a bit ahead of (up 1.17 percent) the 1,460,638 units completed last year at this point.

Companies shared last week's estimated production as follows: General Motors, 57.70 percent; Ford Motor Co., 21.28 percent; Chrysler Corp., 15.76 percent; American Honda, 2.10 percent; American Motors, 2.03 percent; Volkswagen of America, 1.11 percent, and New United Motor Mfg., Inc., 0.02 percent.

Production of the Ford EXP was halted at Ford's Wayne (Mich.) assembly plant last week to facilitate mid-year model changeover of the Ford Escort and Mercury Lynx, which are the facility's principal products. Escort and Lynx are still being built at Wayne.

All three models will get new front ends, with the Escort and Lynx scheduled first in the changeover.

GM scheduled two overtime shifts Saturday (March 2) at the following plants: Lansing (Oldsmobile Nos. 1 and 2); Arlington, Tex.; Doraville, Ga.; Framingham, Mass.; Janesville, Wis., and Lordstown, O.

One overtime shift was scheduled at GM's plant in Wentzville, Mo.

Ford scheduled Saturday overtime at its plants in Atlanta and Dearborn.

Chrysler scheduled two overtime shifts Saturday at its plants in St. Louis (No. 2), Newark, Del., and Detroit (Jefferson).

The St. Louis and Newark plants, as well as Chrysler's Belvidere (Ill.) facility, are scheduled to operate two nine-hour daily shifts this week (March 4).

Chrysler's Jefferson plant is slated to work two 8½-hour daily shifts this week.

Honda scheduled daily and Saturday overtime last week at its Marysville (O.) plant. Until the end of March, the Honda plant will work 16 hours of overtime per week.

Chrysler Financial removes credit curbs of rough days

By Michelle Krebs
Financial Editor

TROY, Mich.—Chrysler Financial Corp. is refinancing its private debt, eliminating the last reminder of Chrysler's economic hard times.

E.O. Grote, president of Chrysler Financial, said the auto maker's financing subsidiary is negotiating with its banks for a two-year, $3-billion revolving credit agreement as well as a $1 billion receivables sales facility, which would allow Chrysler Financial to call its banks and sell its receivables if it were cost effective to do so.

In Canada, Chrysler Financial is negotiating a similar arrangement amounting to $550 million.

Grote said the commitments are in place, and the deals should be wrapped up by April 1.

"What it means to Chrysler Financial is that we will have removed the last remaining restrictions on the company that resulted during Chrysler's problems of a few years ago," Grote said.

"The company will be positioned whereby all of our financing will be on a conventional basis, and this now puts us in a position to be totally competitive in the marketplace.

"Not only will we be able to match what our competition might do, but we will also be able to become innovative in our own way," he said.

Because of its parent company's financial problems, Chrysler Financial was forced out of the public term debt market in 1977. In December, 1983, it returned with a $300 million, five-year term public debt offering.

In 1984, Chrysler Financial did an additional $1.9 billion of public term debt financing, which has allowed the financing subsidiary to borrow at lower rates.

Police recover Chrysler parts

DETROIT.—Police and federal agents recovered $680,000 worth of auto parts stolen from Chrysler Corp.'s Jefferson Avenue assembly plant here. Authorities said they are still investigating and hope to recover more parts and make arrests.

Detroit Police and the Wayne County Organized Crime Task Force began their probe in September and called in U.S. Customs in November when it was discovered that $337,000 worth of starter motors for the 2.6-liter engine were missing. Those had been imported under provisions for a Foreign Trade Zone: Duty is due only when the parts are used, not when they first come into the country.

Slightly more than half those starter motors—1,700—are still missing, said Richard Hoglund, special agent in charge, U.S. Customs, here.

Makers build 67,513 trucks; down for week

Targeted domestic truck production of 67,513 units last week was down a bit (3.40 percent) from the previous week's 69,890 but was 16.73 percent better than the year-ago week's 57,837.

So far this year, 569,169 trucks have been built, 5.99 percent more than the 536,994 completed last year at this point.

General Motors scheduled two overtime shifts Saturday (March 2) at its plants in Janesville, Wis.; St. Louis; Lordstown, O., and Pontiac (No. 5).

Canada climbs above 20,000 in auto production

Canadian auto production climbed above 20,000 units last week after three weeks of lower output partly due to bad weather.

Last week's build was pegged at 20,094 cars, 2.46 percent more than the 19,611 built the previous week and 8.96 percent better than the 18,441 for the year-ago week.

But the year-to-date total of cars assembled continues to trail 1984's, as it has since the first week of January.

So far this year, 171,036 cars have been completed, 10.99 percent fewer than the 192,154 finished last year at this point.

Canadian truck makers scheduled about the same output last week as the previous week (18,704 units versus 18,778, a dip of 0.39 percent), but last week's targeted build was up 34.60 percent over the year-ago week's 13,896.

With 154,873 trucks completed since the beginning of the year, the total build continues higher (up 5.84 percent) than corresponding 1984 production. At this point last year, 146,330 trucks were assembled.

Chrysler's Windsor (Ont.) plant scheduled production of 2,604 Plymouth Voyagers, 2,718 Dodge Caravans and 594 Mini Ram Vans last week, bringing the T-115 total for the year to 48,956.

Chrysler charts new plan for post-VRA operations

By Edward Lapham
Marketing Editor

Chrysler Corp. last week forged a new, post-VRA marketing strategy by forming a Far East component shopping unit, changing its small-car production plans, placing a "firm order" for up to 200,000 more small cars per year from Japanese trading partner Mitsubishi Motors and shifting its capital spending plans into upscale products.

While other U.S. auto makers assessed their options following the Reagan Administration's decision to end the Voluntrary Restraint Agreement which limited Japanese-built car exports to the U.S., Chrysler struck quickly and implemented what Chairman Lee Iacocca called "Plan B."

Iacocca, one of the most outspoken critics of the plan to let VRA expire, said the changes were necessary because of "a new set of rules—free trade, high dollar and cheap gas."

He said he expects the total U.S. car market to remain cyclical between 9.0 and 11.0 million units for the next several years with "foreign nameplates" selling at about 4.5 million units a year.

The new component shopping unit, International Business Development, to be headed by Chrysler Executive Vice President Stephan Sharf, will be charged with increasing Chrysler's overseas purchases of parts and components and seeking joint ventures.

The new small-car strategy includes not only ordering 200,000 more units annually from Mitsubishi, but also altering U.S. production plans. The subcompact P-car, to be introduced as a 1986½ model next year, has been upgraded and will include the 2.2-liter engine, turbochargers and other high-trim items.

Initial P-car planning volume was reduced to 150,000 units per year from 300,000. It will be built alongside the LeBaron GTS and Lancer H-car models at Sterling Heights, Mich., not at Belvidere, Ill., as originally planned.

The production run of L-cars—Omni, Horizon, Turismo and Charger—originally scheduled to end with the 1985 model year, will be extended two years or "for as long as they remain competitive," Iacocca said.

There are no current plans for the Belvidere plant after the L-car run ends. However, Iacocca said he would "move heaven and earth" to keep the plant in operation.

Chrysler also canceled plans to build or acquire a new North American plant. The company terminated its option to acquire the Western Electric Co. plant in Indianapolis and forfeited its $600,000 deposit on the vacant Caterpillar plant in Peoria.

Iacocca said the company has no current plans to build cars in Japan or Korea, but he said he

Honda's latest

Acura Integra debuts in Japan

The latest Honda, called Quint Integra in Japan and Integra in the U.S., will be handled by the auto maker's new division, Acura. The coupe is based on the Civic underbody and has been launched in Tokyo. The nose and tail have been lengthened to give the car a sleek look. Story on Page 30.

Dealers see little impact

By Dan McCosh
Detroit Reporter

Dealers contacted by Automotive News feel there will be little immediate impact on their business as a result of President Reagan's announcement that he will not ask for an extension of the Voluntary Restraint Agreement with the Japanese limiting exports of cars to the U.S.

Most dealers handling Japanese cars said they expect the Japanese themselves to impose informal restraints, fearing a reaction to a flood of shipments. Domestic-car dealers mainly remain confident they are in a more competitive position than when the VRA was first imposed in 1981.

"We don't expect any real changes," said Bud Davidson, Honda sales manager for Sunny King Honda in Anniston, Ala. "We've been selling down our in-

Project 52 car a victim of French firm's financial woes

AMC won't sell larger '86 Renault

By Jean-Jacques Renaux
Special Correspondent

GENEVA.—American Motors and Renault have canceled a plan to introduce in the U.S. a new compact car, bigger than the Renault Alliance/Encore, that was due to appear in 1986.

This was confirmed by Jose Dedeurwaerder at the opening of the Geneva Auto Show here last week.

Because of that decision, AMC won't have any new-car model of some volume to add to its current range before October, 1987, the planned lauch date for the Brampton (Ont.)-made intermediate car previously announced.

The aborted project concerned a sedan that was code-named Project 52. Specifically aimed at the U.S. market, it had been designed in Detroit where the development prototypes were made.

The car was to be built in Europe, however. Final assembly was to take place in Renault's plant in Brussels, Belgium. The 52

Other Geneva show coverage, Page 8.

Project also involved the sourcing of some engines in Mexico.

Dedeurwaerder said the original plan was to lauch the car during the fourth quarter of 1986. Planned volume was 90,000 units a year.

Without that model, he said, "we are going to have two tough years. But it isn't a catastrophe."

Durng that time, AMC will rely on the Jeep program, adding new derivatives to the existing range, and on the existing Alliance/Encore.

AMC will import the Renault Alpine GTA to the U.S. "in order to improve Renault's image and notoriety," but total production capacity for that high-priced performance coupe in France is about 2,000 units a year.

The AMC-Renault 52 Project had received final approval during an AMC board meeting held in January, two days before the French administration dismissed Bernard Hanon, Renault's president.

AMC planned to announce it at a press conference that was to be held in Detroit on Feb. 27. The decision to cancel the whole project was made about Feb. 22, when the AMC board met again.

Georges Besse, Renault's new president, attended that meeting as an observer, not being a member of the AMC board. Hanon was there, too, since he is still one of the five Renault-designated AMC board members.

Dedeurwaerder insisted last week that the decision to cancel Project 52 had nothing to do with Besse and his visit to Detroit. "This was pure coincidence," he said.

The decision was made for financial reasons, it appears, although none of the AMC or Renault managers present in Geneva were ready to go into detail or quote any figures.

The investment program originally involved three parties. AMC was due to participate to the undisclosed total amount. Renault expected the Belgian Government to provide some financial help and was initially due to make up for the balance. Negotiations with the Belgian administration were interrupted, however, in early February, after Besse was named to head Renault, and they never resumed.

A government source in Brussels pointed out last week that the negotiations had not been completed and that the administration had not been officially notified of any decision by Renault.

The whole story raises questions about Renault's support of AMC, although Dedeurwaerder

As nation hails Reagan's VRA decision

Japan to makers: Don't flood U.S.

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—President Reagan's decision not to ask the Japanese to extend their voluntary quota on car exports to the U.S. brought praise from both the Japanese Government and the Japanese automobile industry.

The manufacturers' jubilation was somewhat tempered, however, by a warning from the government not to flood the U.S. market with vehicles. There are indications here that the government is thinking of insituting measures to prevent that from happening.

Keijiro Murata, minister of International Trade and Industry (MITI), hailed President Reagan's anouncement and said MITI would draw up measures in response to the decision while closely watching the situation (exports to the U.S.).

Shortly after the announcement from Washington, Murata urged Japanese auto manufacturers to "avoid torrential" car exports to the U.S. after the Japanese-U.S. agreement on voluntary car export restraints expires at the end of March.

Murata said MITI would study "in close consultation" with the Japanese auto industry during this month whether to take some measures to maintain "modest exports."

However, it is considered difficult, according to industry observers here, for Japan to take effective measures that would not be in violation of the U.S. antitrust laws.

However, MITI officials indicated that the ministry would ask auto manufactuers to restrict shipments to the U.S. to the extent necessary to meet actual demand for Japanese cars, rather than sharply increasing shipments for restocking purposes.

• Takao Fujinami, state minister (chief cabinet secretary and chief government spokesman), also stressed that it is important for the Japanese auto makers to export cars to the U.S. in a prudent manner.

In response to the President's statement, MITI will examine the auto case, fully taking account of the various factors, Fujinami said.

At any rate, the Government of Japan deems it imperative that the Japanese auto companies exercise prudence, based on sound

May not adopt U.S. position

Canada mulls future of Japanese-car quota

By Richard Johnson
Detroit Reporter

The removal of Japanese import restrictions in the U.S. doesn't necessarily mean an end to limits on Japanese cars coming into Canada.

Canadian Government officials hope to decide by March 31 whether to continue an agreement which last year restricted Japanese makers to 170,000 cars. But Denis Comeau, of Canada's Ministry of International Trade, said President Reagan's decision to let the U.S. Government-backed Voluntary Restraint Agreement die won't dictate the future of restraints north of the border.

"Of course, the implications of the President's decision are being analyzed," he said. "But in the end, our ministers will be making a decision based on the interests of Canada."

Both Ford of Canada and Chrysler Canada have supported continuation of a quota. General Motors—which opposed restraints in the U.S.—has taken a different position in Canada.

While not openly in favor of restrictions, GM of Canada has urged the government to assure that off-shore producers are not given an unfair advantage over firms which have invested heavily in the country.

Meanwhile, Japanese dealer interests in Canada have said removal of restraints in the U.S. is a sign that Canadian restrictions should also come off. Opponents of the quota have cited a recent government report which linked restraints with a shortage of small-car selection and price increases.

Limits on Japan's share of the Canadian market were set in 1981, at the same time the Voluntary Restraint Agreement for the U.S. was established. Japanese companies had captured 22 percent of Canada's auto sales before limitations were imposed.

Under a revised one-year extension which took effect April 1, 1984, Japanese auto makers were held to no more than 18 percent of the passenger-car market. The agreement specified that if total new-car sales for the 1984 calendar year reached 943,000 the Japanese allocation would rise to a maximum of 170,400 for the year ending March 31, 1985. Auto sales totaled 964,357 in Canada last year.

Comeau said the future of restraints is currently being weighed by Canada's ministers of International Trade, Finance and Regional Industrial Expansion. International Trade Minister James Kelleher visited Japan in February to discuss auto imports.

Don Megaffin, a Honda dealer in Halifax, N.S., and president of the Canadian Assn. of Japanese Automobile Dealers (CAJAD), said he is "optimistic with my fingers crossed."

"It is hard to believe Canada would go on its own and continue with restrictions," he said.

Megaffin predicted that the Japanese manufacturers would not unleash a tidal wave of cars in Canada if restraints are lifted. He said Japanese volume would probably increase from the current level of 170,000 to a range of 200,000-210,000.

He said restraints have forced Japanese makers to concentrate on higher-priced models and opened doors at the subcompact end for companies like Hyundai, the Korean manufacturer.

Hyundai began selling its Pony subcompact in Canada last year and quickly captured 11 percent of the country's import market with sales of more than 25,000 units.

A spokesman for Ford of Canada said the company has asked the Canadian Government to extend the quota for another year.

"From our perspective, the Canadian market has not fully recovered to the level we think it should be at," he said. Despite two years of profits in Canada, he said, the company has not made up for the lean years.

"There is no need for the restraints to come off just because they came off in the U.S.," said a spokesman for Chrysler Canada.

Although GM opposed Japanese restraints for the U.S., it is taking a different line in Canada.

"There are substantial differences in the U.S. and Canadian auto markets," said a spokesman for GM of Canada. "What applies to the U.S. doesn't necessarily apply to Canada."

While GM has not come out in favor of restraints, he said the company believes it is up to the government to assure that companies like GM which have invested heavily in the country do not get unfavorable treatment.

Chrysler pact with Lotus is for 16-valve head

GENEVA.—Chrysler Corp.'s engineering agreement with Lotus is for a high-performance cylinder head for the 2.2-liter engine made at Trenton, Mich.

The 16-valve head will be produced in both normally aspirated and turbocharged form beginning in 1988, but no other details are available.

Mike Kimberley, managing director of Lotus, signed the deal in Detroit March 1. It was the culmination of two years of discussions by Lotus.

"It is a substantial agreement for us, though not necessarily by Chrysler standards," Kimberley said at the auto show here.

Whether the contract will be extended to include the high-performance V-8 engine which Lotus is preparing is not known. The British sports-car manufacturer plans to use the V-8 in its own Etna coupe, but only if it can sign a volume order to supply another manufacturer.

Volvo, Bertone team up for 780

Volvo unveiled its new 780 coupe at the Geneva Auto Show last week. It is built by Bertone and is based on the chassis and running gear of the 760 sedan. The 780 will go on sale this fall for more than $30,000.

$30,000 coupe aimed primarily at U.S.

Bertone's Volvo 780 unveiled

GENEVA.—The new Volvo 780 coupe—unveiled amid much pomp at the auto show here last week—is a car aimed primarily at the U.S.

The Bertone-built two-door will go on sale this fall at a price in excess of $30,000.

Roger Holtback, Volvo Car Corp. chief executive, identified coupe versions of the Mercedes-Benz S-class, Jaguar XJ-S, BMW 6-Series and Lincoln Mark VII as the competition.

The 780 is unusual in that development costs have been shared equally by Volvo and Bertone, the Italian coachbuilder. Only 1,000 will be built in the first year —starting in May—but Holtback said that annual volume could rise as high as 4,000.

In the initial stages, the 780 will be sold only in the U.S. and Italy. Deliveries to other countries will not take place until the fall of next year.

The U.S. version will be powered by a 2.5-liter turbocharged version of the current V-6 gasoline engine. It will produce 163 HP and have a top speed of 122 MPH. In Italy, Volvo will sell a 129-HP turbodiesel version.

The 780 is based on the chassis and running gear of the 760 sedan, but it has bigger tires and is fractionally longer and lower. Volvo will supply chassis to Bertone in Turin, where the distinctive bodywork and luxury trim will be fitted.

Volvo's coupe was one of the few new products being shown in Geneva. Rolls-Royce Motors displayed Project 90, a coupe reminiscent of the Bentley Continental. The interior is that of the Bentley Mulsanne Turbo. There is no production decision.

Citroen appears set on producing a design exercise each year. This year's is the Eole (pronounced Ayol), about the same category as the current CX sedan. Pininfarina displayed a special body to celebrate its long association with Peugeot.

Spain's Seat planning to enter U.S. market

By Richard Feast
European Editor

GENEVA.—Seat, Spain's state-owned auto maker, is making plans to enter the U.S. market in 1988. It wants to appoint an importer immediately so the company can be fully involved with Seat in planning the products and strategy.

It will go to the U.S. with the second-generation Ibiza model to be launched in three years. The Ibiza will be a sedan and hatchback in the low-priced end of the market. The car will have Porsche-designed engines and styling by Ital Design's Giugiaro.

It will be pitched into the competitive Japanese sector and may prove to be serious competition for the forthcoming cars from Hyundai and Yugo.

Seat commercial director Juan Diaz Ruiz believes that Seat eventually could sell 40,000 to 50,000 Ibizas a yeart in the U.S.

The plan will go ahead regardless of any agreement that is made by Volkswagen and Seat. The two companies are negotiating financial links to complement their current production and marketing ties.

While Seat makes the Polo in Spain for sale through the VW network and also retails VW and Audi in Spain, there is no VW stake in the loss-making Seat group. INI, the Spanish state

From Ford of Europe

Ford of Europe previewed the Sierra RS Cosworth at the Geneva Auto Show last week. The car has a deep front spoiler and an enormous rear wing. It will go into production in the last quarter of 1985 in Genk, Belgium.

Ford exhibits Sierra with Cosworth engine

GENEVA.—Ford of Europe previewed a 200-HP Sierra powered by a Cosworth engine at the international auto show here.

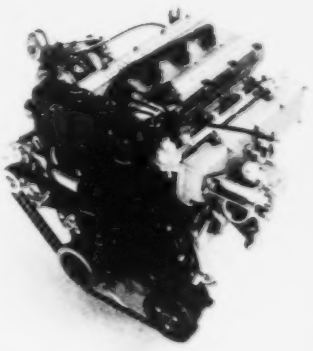
The Sierra RS Cosworth will go into production at Genk, Belgium, in the fourth quarter of this year. Ford will sell the car in the 15 major European markets during 1986, when an application for certification in Group A motorsports events will be made. Group A requires a minimum production run of 5,000 units.

Cosworth's development embraces a 16-valve cylinder head, Garrett AiResearch T3 turbocharger and Weber/Marelli electronic engine management. But it uses the Sierra's regular four-cylinder, 2-liter engine block.

The result, predicts Ford, will be a car capable of 150 MPH and acceleration from rest to 60 MPH in less than seven seconds.

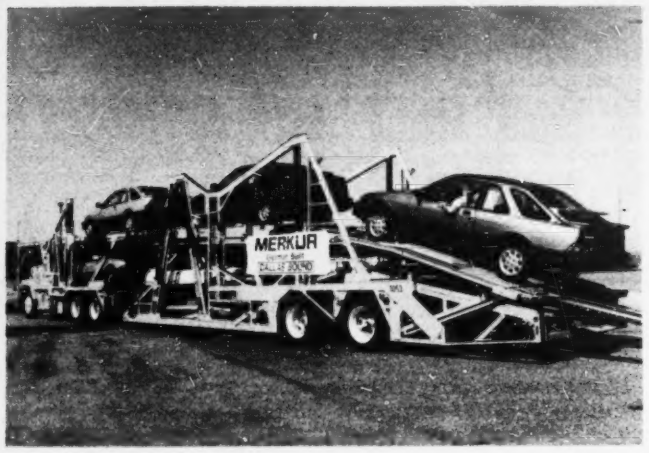
Other modifications to the three-door car include a Borg-Warner close ratio 5-speed gearbox, a viscous coupling limited slip differential and anti-lock braking. It has a deep front spoiler, other bodywork modifications and—most noticeable of all —an enormous rear wing.

The Cosworth version was an eve-of-show announcement. Ford had already revealed details of the four-wheel-drive Sierra XR4x4 which is also featured on its stand here.



Power plant

Ford of Europe's Sierra RS Cosworth, previewed at the Geneva Auto Show, employs a 16-valve cylinder head and Garrett AiResearch T3 turbocharger. It uses the Sierra's regular four-cylinder, 2-liter engine block.



Merkurs bound for Dallas

A load of 1985 Merkurs from Ford of Germany is readied for shipment from Ford's Predelivery Center in Houston to Dallas-area Lincoln-Mercury dealers. Houston is one of five U.S. ports of entry where Merkurs are checked before shipment by truck convoy to dealers.

But car-sales total of 838,607 trails a year ago

Domestics ignite at month-end

By Jenny L. King
Detroit Reporter

The new-car market held its own in February with imports up 3.80 percent and the domestics bouncing up and down, then 'way up in the three reporting periods, finishing the month ahead on a daily-rate basis but off in units.

The sales total for the second month of the year was 838,607, off 0.31 percent from 841,234 in the year-earlier month. Domestic sales numbered 645,317, down 1.48 percent from 655,016 a year earlier. The imports claimed 23.05 percent of the February total, based on sales of 193,290. A year ago, 186,218 imported cars were delivered, representing 22.14 percent of the market.

Domestic sales shot up 15.79 percent on a daily-rate basis the final February period, to a healthy daily rate of 35,905 from a 31,008 average in 1984. For the full month, the daily rate was 26,888, up 2.62 percent from 26,201 in 1984.

Year-to-date domestic sales were up 2.82 percent, to 1,273,354 from 1,238,445. The imports were up 4.97 percent, to 400,302 from 381,347. Industry total for the first two months of this year was up 3.97 percent, to 1,673,656 from 1,609,792.

Chrysler Corp. reported a 27.03-percent year-to-year increase in February and carved out its largest monthly hunk of the domestic market in recent years, 15.83 percent. Chrysler sales for the month totaled 102,162, compared with sales of 80,425 new passenger cars 12 months ago when the auto maker claimed 12.28 percent of the domestic market.

Ford Motor Co. counted sales of 166,862 units, up 1.02 percent from 165,170 in 1984. Honda was up 28.10 percent, to 13,342 from 10,415.

General Motors reported a sales drop of 7.30 percent for the month, to 346,616 from 373,910. Volkswagen was down 6.28 percent, to 6,236 from 6,654 and American Motors was down 45.24 percent, to 10.099 from 18,442.

Chrysler gained more than 2.5 percentage points in the domestic market in February, growing to 15.83 percent from 12.28 percent. Ford was up slightly, to 25.86

Michigan OK's seat-belt law; 4th in nation

LANSING.—A bill requiring use of seat belts in Michigan has passed the legislature and was due to be signed into law by Gov. James Blanchard on Friday, March 8.

The law, which applies to drivers and front-seat passengers in vehicles made since Jan. 1, 1965, is due to take effect July 1. Violators will pay a $10 fine until Jan. 1, 1986, when the penalty will increase to $25.

Michigan is the fourth state to approve mandatory seat-belt-use legislation, following New York, New Jersey and Illinois. New York's law is now in effect, New Jersey's law is effective March 1 and the Illinois statute takes effect July 1.

MVMA hailed passage in Michigan as a "milestone on the road to enactment of legislation in all 50 states."

U.S. Transportation Secretary Elizabeth Dole ruled last year that auto manufacturers must install costlier passive-restraint systems unless states representing two-thirds of the nation's population approve seat-belt-use laws by 1989. MVMA expects that 40 other states will consider belt-use legislation during 1985.

'Drive closer, Charley, I can't see the invoice'

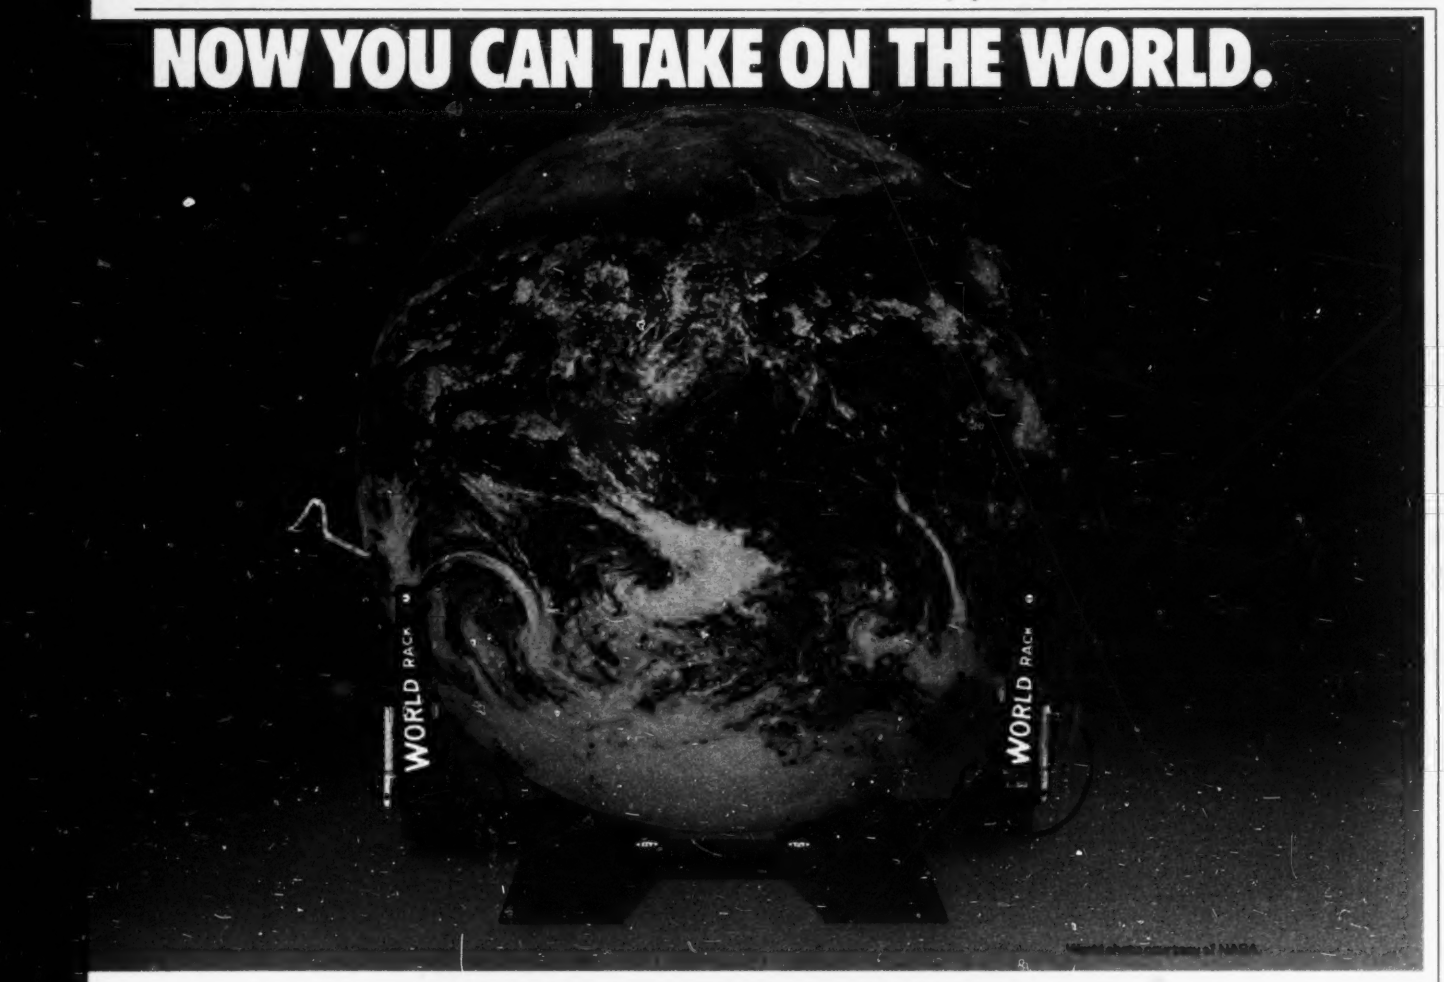
Niles, Mich.—An unexpected "headlight sale" was held here one night last week at Ray Hara's King Datsun.

When a windstorm that battered the area disrupted electrical service, the dealerhip's sales managers, Graham Grimes and Sonny Baackes, turned on the headlights of all 20 cars on the showroom floor and had the salesmen continue to wait on customers.

From 7 p.m., when the showroom lights went out, until 9:30 p.m., when the last customer departed, King Datsun sold 12 cars.

A news crew from Channel 2 television happened by and recorded the activity on minicam.

NOW YOU CAN TAKE ON THE WORLD.



KANSAS JACK BRINGS YOU A WORLD'S FIRST: THE WORLD RACK.™

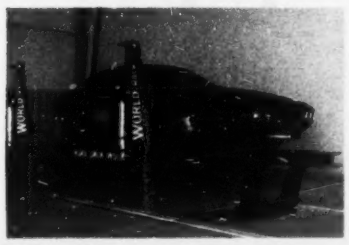
There's never been a rack like this. We designed it from the ground up to handle any car in the world . . . at a down-to-earth price.

We built it to make the most of your floor space, to add high production capability without tying up a bay. When not making pulls, towers can be removed so it can be used for wheel alignment, sanding, masking, detailing, and other repair tasks.

We made it versatile. Independently-powered and controlled towers provide full circle pulling potential so you can pull exactly where you want—even across the ends of the rack. You can work on the front or back of the car without repositioning it. And you can pull with the rack in a raised or lowered position.

We also built a world of productivity into the World Rack. To speed work, a powerful hydraulic lift gives plenty of under-car work space, and the open-end design eliminates obstructions. Drivable cars can be driven right onto the rack and centralized lifting controls allow fast one-man operation. What's more, the easy-on, easy-off towers can be repositioned in less than a minute.

Best of all, we priced the World Rack very competitively. Put it to work for you. It'll make a world of difference in your profits. To learn more, call **1-800-235-5225**



The World Rack provides full 360° pulling potential.

Customer

High Interest.

For 13 years, we've been adding features to America's finest automobiles to make customers want to buy. That, after all, is the first step to making a sale—getting the customers interested. But, E & G Classics goes beyond creating simple interest. Our classic styling piques customer interest to the point where they "have to have that car!" Your customers will love E & G classic grilles, simulated convertible tops, stylish deck straps, and more. These are the kinds of high profit extras that will put the beef back into your bottom line. That's the E & G "Dealer's Advantage"—profits. All of these features are easy to sell because people want them. So, call us today for the E & G "Dealer's Advantage"—high customer interest.

COMING

As a part of your regular yearly subscription, we're sending you the single most important year-long reference source: the **1985 Market Data Book**. This inclusive annual source of car and truck vehicle facts and figures is far more than a statistics compilation. It includes detailed data, charts and analyses that help define industry patterns and trends in such areas as:

- **Retail price comparisons 1984-1985 for import and domestic vehicles**
- **Associations and buyers guide**
- **Options and accessories listings**

...and much more!

Look forward to this reference to compare the past with the present, to plan for the future.

25.54 pct. of November registrations

Market share rises for imports

By Jenny L. King
Detroit Reporter

New imported cars claimed a larger piece of the total U.S. market in November, 1984, than they had the preceding month as well as for November, 1983, according to registration figures compiled by R.L. Polk & Co.

Imports represented 25.54 percent of the November, 1984, total, up from 24.97 percent in October and up from 25.08 percent in November, 1983. Their numbers were up 18.52 percent year to year in November, to 208,481 from 175,902.

Honda and Nissan made the largest gains in market shares over a year's time. Honda was up 1.62 percentage points, to 19.76 percent from 18.14 percent, and Nissan moved up an even 1.00 percentage point, to 19.00 percent from 18.00 percent.

Other makes to better their positions were BMW, up 0.28 percentage points, and Mercedes-Benz, which was up 0.20 points.

Toyota's share of the November market dropped 1.85 percentage points; VW was down 1.47 percentage points; Mazda, 0.45 percentage points; Subaru, 0.02 percentage points, and Volvo, 0.80 percentage points.

The top 10 imports earned 87.49 percent of the import market, down from 88.44 percent in November, 1983.

Registrations for the 11 months pushed close to 2.3 million and were up 3.58 percent over the figure from 1983. Year-to-date registrations were 2,298,121 versus 2,218,776.

With its numbers for the 11 months down more than 30,000 units, Toyota yielded 2.09 percentage points. Nissan, also down 30,000, dropped 2.11 percentage points while Honda, buoyed by registrations of its U.S.-built cars plus the imports, garnered 3.41 added percentage points over a year's time.

European makes all increased their shares of the total and the remaining Japanese brands, Mazda and Subaru, had less of the pie. VW was up 0.48 percentage points; Volvo, 0.12 percentage points; Mercedes-Benz, 0.05 percentage points, Audi, 0.93 percentage points, and BMW, 0.36 percentage points.

Mazda dropped to 6.55 percent from 7.00 percent in 1983, and Subaru was down to 5.81 percent from 6.02 percent.

Ten imports had 89.43 percent of the year-to-date market, up from 88.94 percent in 1983.

Restrictions on Japanese imports were evident as their share of the import total continued to decline both on a month-to-month basis and over the longer year-to-date stretch. Japanese cars represented 73.44 percent of the November, 1984, total, down from 75.45 percent the preceding year. German products were up to 11.88 percent from 10.57 percent and U.S.-built Hondas and VWs were up to 7.75 percent from 6.30 percent.

Following is a list of units from the eight major countries included in import registrations:

	Nov., 1984	Nov. 1983
Japan	153,106	132,711
West Germany	24,777	18,588
United States	16,166	11,085
Sweden	9,530	9,085
France	2,506	2,880
Great Britain	1,839	1,071
Italy	541	402
Ireland	16	80
TOTAL	208,481	175,902

Year-to-date penetration for the Japanese auto makers decreased to 72.10 percent from 76.88 percent. German makes were up to 12.41 percent from 10.33 percent and U.S. products grew to 8.07 percent from 5.02 percent. Cars from countries of origin the first 11 months of 1984 compared with 1983 included:

	11 Mos., 1984	11 Mos., 1983
Japan	1,656,992	1,705,702
West Germany	285,234	229,102
United States	185,440	111,354
Sweden	118,669	105,812
France	28,765	43,700
Great Britain	16,212	13,867
Italy	6,473	8,315
Ireland	336	924
TOTAL	2,298,121	2,218,776

November registrations of new imported trucks were up 57.80 percent, to 59,315 from 37,589. Numbers from the major importers included:

	Nov., 1984	Nov., 1983
Toyota	22,705	12,236
Nissan	15,065	8,746
Mazda	9,212	6,473
Dodge Ram 50	5,026	3,052
Others	7,307	7,082
TOTAL	59,315	37,589

Imported-truck registrations January through November were up 51.93 percent from 1983 to 1984, to 674,296 from 433,830. The breakout of the top four featured:

	11 Mos., 1984	11 Mos., 1983
Toyota	261,781	156,110
Nissan	176,661	120,194
Mazda	105,970	62,199
Dodge Ram 50	45,346	29,360
Others	84,538	75,967
TOTAL	674,296	443,830

Echlin purchases Raymark division

BRANFORD, Conn.—Echlin, Inc., and Raymark, Inc., Trumbull, Conn., have signed a letter of intent under which Echlin will purchase certain assets of Raymark's Brake Systems Division for approximately $55 million.

The Raymark division is a manufacturer and marketer of friction materials and a marketer of hydraulic brake parts for the automotive and truck replacement markets, sold under the brand names of Raybestos and Grey Rock. The division had sales of $105 million for the first nine months of 1984.

Domestics up 15 pct.; imports, 18 pct. in November

Month's registrations best since '78

By Jenny L. King
Detroit Reporter

November new-car registrations climbed well above their 1983 level and were strongest for the month since 1978, though they were below the October total and were third lowest of the 1984 calendar year.

Total registrations of 816,414 were up 16.39 percent from 701,-

Table on Page 53.

448 in November, 1983, according to figures compiled by R.L. Polk & Co. The October sum was 834,-300, a difference of 2.14 percent.

The domestics' November figure of 607,933 was up 15.68 percent from 525,546 for the same month in 1983 and down 2.88 percent from 625,970 in October, 1984.

Import registrations were up 18.52 percent November to November, to 208,481 from 175,902. Their share of the market edged up to 25.54 percent from 25.08 percent.

Largely as a result of UAW strikes during the fall, General Motors dropped 3.70 percentage points in November market penetration as Ford Motor Co., Chrysler Corp. and the imports picked up the pieces. GM slipped to 41.93 percent from 45.63 percent of the total November market. Ford was up 1.89 percentage points, Chrysler gained 1.55 percentage points and imports were up 0.46 percentage points.

American Motors dropped to 1.79 percent from 1.99 percent year to year and miscellaneous domestics remained infinitesmal with 19 registrations last November versus 32 in 1983.

Excluding imports, the November market was split in this fashion: GM at 56.30 percent, Ford at 27.48 percent, Chrysler at 13.81 percent, AMC at 2.41 percent and miscellaneous at 0.00 percent. A year earlier GM had 60.89 percent, Ford had 24.79 percent, Chrysler had 11.65 percent, AMC had 2.66 percent and miscellaneous had 0.01 percent.

The imports' 25.54-percent share of the November market was followed by 25.06 percent for domestic intermediates. Compacts had 17.92 percent, subcompacts had 12.22 percent, standards had 10.30 percent and luxury cars had 8.96 percent.

A year earlier, the largest market share went to intermediates—27.29 percent—followed by imports at 25.08 percent, compacts at 18.15 percent, standards at 12.08 percent, subcompacts at 11.68 percent and luxury models at 5.72 percent.

January through November registrations were up 15.98 percent, to 9,295,510 from 8,014,526. The 1984 total was 33.00 percent ahead of the 6,988,889 posted two years earlier.

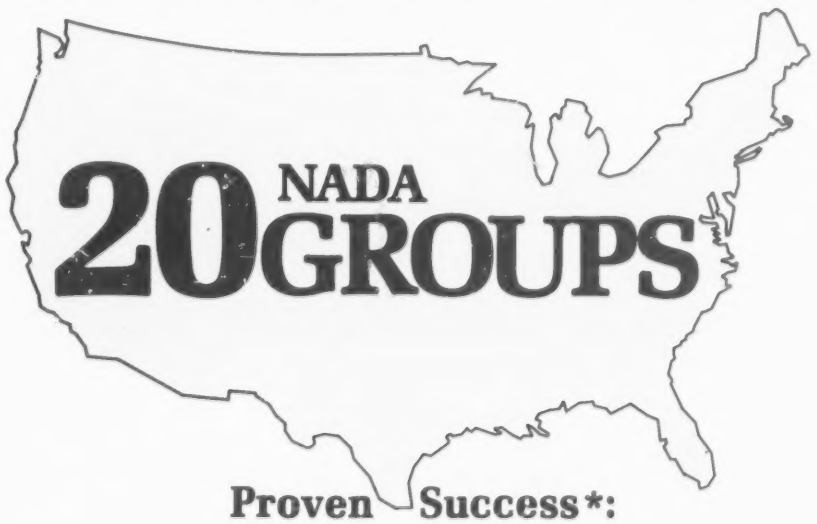
Domestics were up 20.73 percent, to 6,997,381 from 5,795,750 and imports climbed 3.58 percent, to 2,298,121 from 2,218,776.

In the 11 months, imports, AMC and miscellaneous domestics yielded market shares to Chrysler, Ford and General Motors.

Ford was up 2.14 percentage points in penetration, to 19.19 percent from 17.05 percent. Chrysler was up 0.29 percentage points, to 9.52 percent from 9.23 percent, and GM gained 0.76 percentage points, going to 44.67 percent from 43.91 percent.

The imports' year-to-date share of the market dropped 2.96 percentage points, to 24.72 percent from 27.68 percent. AMC was down to 1.90 percent from 2.12 percent and miscellaneous domestics dropped from 0.01 percent to no penetrations.

PROVEN MANAGEMENT PROGRAMS
TAILORED FOR THE
NO-NONSENSE DEALER



20 NADA GROUPS

Proven Success*:

"Each dealer is there to help his buddy, and you know, camaraderie builds up within the 20 Group, because you are not competing. You are willing to tell all the secrets of how you make money, how you service a customer, how you've improved quality, this or that, it's all very much a free exchange of information."

Bob Sharp, Milton, CT

"The main reason I joined the 20 Group Program was because I wanted to learn how to be a better manager. I wanted to learn what makes an excellent operation, and I wanted mine to be professionally run."

Allison Gas Turbine plant begins major overhaul

INDIANAPOLIS.—The Allison Gas Turbine Division of General Motors is launching a major modernization and technology improvement program aimed at transforming the division's manufacturing operations into a "factory of the future."

The first phase of the program will take three years to accomplish, according to F. Blake Wallace, division general manager. During that time, the division will install new integrated manufacturing, quality assurance and information management systems. The added investment by GM will be $112 million.

"This will enable us to preserve the jobs we now have," Wallace said, "and, hopefully, would create more jobs in the future."

Allison is a major designer and manufacturer of gas-turbine engines for aircraft, vehicular and industrial/marine power systems.

Wallace said other elements of Allison's strategy—increased product development, a revised management structure and expanded marketing—have been under way since 1983, when GM separated the gas-turbine business from Detroit Diesel Allison Division and set up the Allison Gas Turbine Division as a separate business operation.

Explaining some details of the program, Wallace said the new systems fall into three basic categories that will interface with one another. These are flexible, computer-integrated manufacturing; computer-aided engine design, and data management communications.

The first installation which will incorporate these systems is a precision gear manufacturing center. Typical of the new machinery and equipment to be installed, this center will be completely computer controlled.

Average hike is $418.42 during past year

Import prices rise sharply

By John K. Teahen Jr.
Managing Editor

After two years of rather moderate increases, prices of imported cars showed a major rise during the past 12 months.

The annual *Automotive News* analysis found an average hike of $418.42, or 5.5 percent, for the best-selling—or "popular-priced"—imports.

It was much greater than the average boost of $163.25 recorded in the 1984 study, and it was many times the paltry $57.39 found in 1983.

Going back a bit farther, the average bump on the best-selling imports was $488.09 in 1982 and an astounding $812.60 in 1981.

The latest boost of $418.42 is based on a comparison of 91 models offered by 11 makers. They are models that apperar in the current and year-ago lineups of those nameplates.

The cutoff point this year was $11,000. Cars in that price class accounted for 67.67 percent of the new imported autos sold in the U.S. last year.

Admittedly, $11,000 is a lot of money for a "popular-priced" automobile. But as any shopper knows, new cars—both imported and domestic—are very-big-ticket items these days.

It's still possible to find a good selection of imports under $7,500, but the market is moving steadily upward.

Toyota gets a big chunk of its sales from Camry, Celica, Cressida and Supra. Stanza, Maxima, 200-SX and 300-ZX are strong sellers for Nissan. Accord and Prelude are big for Honda, and the 626 is Mazda's leader, followed by the RX-7.

None of those are economy cars. Many of them, in fact, are in the medium-price class (above $11,000), but their popularity is growing, nevertheless.

The 91 models in this year's under-$11,000 comparison are offered by Dodge Colt, Plymouth Colt, Honda, Isuzu, Mazda, Mitsubishi, Nissan, Renault, Subaru, Toyota and Volkswagen.

Only the imported models of Volkswagen and Renault are included. The VW Golf and GTI (Rabbit last year) and the Renault Alliance and Encore are omitted because they are made in the U.S. On the other hand, Honda Accord is included because Accords are imported as well as being built in this country.

Only one of the 11 makes in this year's analysis was close to the average increase of $418.42. That was Nissan with a hike of $416. Seven makes were below the average and three others were above it.

On the "up" side were Subaru, with an average boost of $496; Mitsubishi, with a hike of $506, and Toyota, which rose $555.

Posting increases below the average were Isuzu, $250; Honda, $263; Renault, $300; Volkswagen, $309; Dodge Colt, $379; Plymouth Colt, $379, and Mazda, $380.

The average increase for the top five Japanese makes in the popular-priced class was $431.81, quite similar to that of the overall segment. The top five Japanese lines are Toyota, Nissan, Honda, Mazda and Subaru.

In the medium-priced field ($11,000 to $18,000), stickers went up an average of $671.46, or 4.91 percent, during the last 12 months. That compares with boosts of $544.95 in last year's study, $374.16 in 1983, $898.79 in 1982 and $1,067.34 in 1981.

The analysis of the mediums involved 50 models offered by 15 makes. The medium-priced field accounted for 22.58 percent of imported-car sales last year.

Offering one or more models in this segment are Alfa Romeo, Audi, BMW, Dodge/Plymouth Conquest, Isuzu, Mazda, Mitsubishi, Nissan, Peugeot, Renault, Saab, Toyota, Volkswagen and Volvo.

Of the 15 makes, only Alfa Romeo and Peugeot fit completely in this class. Elsewhere, the group includes the top models of some of the popular-priced makes and the lower-priced models of some of the highest-priced makes.

The preceding sentence requires at least a second reading, but that's how things stand among the medium-priced imports.

The Audi 4000, Coupe GT and 5000 sedan are in this class. So are the BMW 318i, the Dodge/Plymouth Conquest, the Isuzu Impulse and the top Renault Sportwagon.

The fanciest Mazda 626 is a medium, along with three RX-7 units. The Mitsubishi Starion is included, and so are the Saab 900 and 900-S and the Volvo DL and GL. VW's entries are the Cabriolet and the Quantum.

Nissan contributes the 200-SX Turbo, a 300-ZX and a pair of Maximas. Toyota's mediums are the top Camry and Celica models, the Supra and the Cressida.

There are other models in the medium-priced field, but they are new for the 1985 season. Since they had no 1984 counterparts, they could not be included in this comparison.

Ten of the makes in this price segment were below the $671.46 average price hike for the class. Two show decreases, and another is unchanged.

The Alfa Romeo average is down $1,000 because of a $2,500 cut on the GTV-6 coupe, and VW is down an average of $427 because the Quantum wagon was

* 1984 Business Week Subscriber Study

Continued from Page E-14

slashed $2,210. VW's other mediums, the Cabriolet and Quantum sedan, are up.

BMW held the line on its 318i two-door, the only one of its medium-priced models that was around at this time last year.

The mediums that did increase prices but stayed below the $671.46 average were: Renault, up $350; Dodge/Plymouth Conquest, $415; Mitsubishi, $477; Peugeot, $484; Isuzu, $550, and Mazda, $550.

Above-average price hikes for this class were posted by Toyota, $958; Saab, $973; Audi, $975; Nissan, $1,438, and Volvo, $1,601.

In the luxury class ($18,000 and up), the 33 models compared had an average increase of $767.39. It was considerably less than the hike of $1,049.08 in last year's analysis.

The reason for the smaller boost is simple: Mercedes-Benz has not increased its prices in the last year. Mercedes has more models than any other luxury import, and its price increases in other years have been substantial.

In addition to Mercedes, the luxury class includes all Porsches and Jaguars and all BMWs except the 318i. Also on the list are a pair of Nissan 300-ZX units, the Maserati Biturbo and the top-line models frpom Audi, Volvo and Saab.

As noted, Mercedes didn't raise prices at all. BMW, with an average hike of $403 was the only other luxury import below the class average.

Increasing their prices more than the $767.39 norm were Maserati, $929; Audi, $1,022; Volvo, $1,148; Porsche, $1,200; Saab, $1,215; Jaguar, $1,267, and Nissan, $1,450.

The Porsche situation is worthy of comment. Prices of four Porsche models are unchanged from a year ago. The fifth (the 928 coupe) went up $6,000, so the average jump for the five was $1,200.

The luxury class accounted for 9.75 percent of the imported cars sold in the U.S. in 1984.

In each of the three classes—popular-priced, medium-priced and luxury—the Automotive News analysis was based on comparable models, those that appear in the current and year-ago lineups of a particular make. In a few cases, models that occupy the same relative position in a maker's lineup were compared.

Prices considered were Manufacturer's Suggested Retail Prices. Where prices differ by geographic areas, East Coast prices were used.

Data on changes was based on an arithmetical comparison of prices in effect on March 1 of this year with those in effect a year ago. For models introduced later in the 1984 model year, introductory pricers were used. There was no sales-weighting, and no adjustments were made for year-to-year equipment changes.

Import-car retail prices

Prices in effect March 1, 1985

The following prices are Manufacturer's Suggested Retail Prices. They include ocean freight and import duty. They do not include inland shipping charges, state or local taxes, optional equipment or special equipment required by state laws. Where East Coast and West Coast prices differ, East Coast prices are used, unless otherwise indicated. Prices are for 1985 models.

Copyright, 1985, Automotive News

ALFA ROMEO—Graduate convertible (5-speed), $13,500; Spider Veloce convertible (5-speed), $16,500; GTV-6 coupe, (5-speed), $16,500. (**Power disk brakes** standard on Veloce and GTV-6. **Air conditioning** standard on GTV-6.) (Prices do not include dealer prep fee of $150 on Graduate and Veloce, $160, on GTV-6.)

ASTON-MARTIN—V-8 coupe, $100,000; V-8 Vantage coupe, $110,000; V-8 Volante convertible, $125,000; V-8 Lagonda 4-door sedan, $150,000. (**Automatic transmission** standard on Lagonda; **automatic or 5-speed manual** are no-charge choices on other models. **Power steering, power disk brakes, radio, air conditioning** standard on all models.) (Prices include dealer prep fee.)

AUDI—4000-S—4-door sedan (5-speed), $13,950; Quattro—4-door sedan (5-speed), $17,450. **Coupe GT**—Coupe (5-speed), $15,250. **5000—S**—4-door sedan (5-speed, $17,710; 4-door wagon (5-speed), $18,920; Turbo 4-door sedan (automatic), $23,875. **Quattro Turbo**—Coupe (5-speed), $35,000. (**Power disk brakes, power steering, air conditioning** standard on all models. **Radio** standard on 4000-S Quattro, 5000-S Turbo and Quattro Turbo. **Automatic transmission** is $450 on 4000-S sedan, Coupe GT, 5000-S sedan and 5000-S wagon.) (Prices do not include dealer prep fee.)

BENTLEY—Mulsanne 4-door sedan, $97,950; Mulsanne L 4-door sedan, $108,390; Continental convertible, $155,470. (**Automatic transmission, power steering, power disk brakes, radio, air conditioning** standard on all models.) (Prices do not include dealer prep fee.)

BERTONE—Targa coupe (5-speed), $9,995. (**Power disk brakes** are standard.) (Price does not include dealer prep fee of $179.)

BMW—318i—4-door sedan, $16,925; 2-door sedan, $16,430. **325e**—4-door sedan, $21,105; 2-door sedan, $20,970. **528e**—4-door sedan, $24,565. **535i**—4-door sedan, $30,760. **735i**—4-door sedan, $36,880. **635-CSi**—Coupe, $41,315. (**5-speed transmission, power steering, power disk brakes, air conditioning** standard on all models. **Radio** standard on all models except 318i. **Automatic transmission** is $595 on 318i and 528e; $795 on other models.) (Prices do not include dealer prep fee of $90 on 318i, $155 on 635-CSi and $100 on other models.)

CHEVROLET SPECTRUM—4-door sedan (5-speed), $6,575; 2-door hatchback (5-speed), $6,295. (**Power disk brakes** standard on both models. **Automatic transmission** is $395.) (Prices include dealer prep fee.)

CHEVROLET SPRINT—2-door hatchback (5-speed), $5,151. (**Power disk brakes** are standard.) (Price includes dealer prep fee.)

DODGE COLT—Colt E—5-door hatchback (5-speed), $6,029; 3-door hatchback (4-speed), $5,372. **Colt DL**—4-door sedan (5-speed), $6,492; 3-door hatchback (5-speed), $6,177. **Colt Premier**—4-door sedan (5-speed), $7,409. (**Power disk brakes** standard on all models. **Automatic transmission** is $384, not available on Colt E 3-door.) (Prices include dealer prep fee.)

DODGE COLT VISTA—5-door wagon (5-speed, 2-wheel drive), $8,721; 5-door wagon (5-speed, 4-wheel drive), $9,809. (**Power disk brakes** standard on both models. **Power steering** standard on 4WD model. **Automatic transmission** is $384 with 2WD, not available with 4WD.) (Price includes dealer prep fee.)

DODGE CONQUEST—2-door liftback, $12,564. (**Power steering, power disk brakes, radio** are standard. **Automatic transmission** is $542.) (Price includes dealer prep fee.)

DODGE RAM 50—Pickup Trucks (2-wheel drive)—Custom (4-speed), $5,748; Royal (5-speed), $6,456. **Pickup Trucks (4-wheel drive)**—Power Custom (5-speed), $8,177; Power Royal (5-speed), $8,743. (**Power disk brakes** standard on all models. **Power steering** standard on Power Custom and Power Royal. **Radio** standard on all models except Power Custom. **Automatic transmission** is $374 on Royal and Power Royal, $433 on Power Custom, $476 on Custom.) (Prices include dealer prep fee.)

FERRARI—308 Quattrovalvole—Berlinetta coupe, $54,300; Spider convertible, $59,500. **Mondial**—Coupe, $59,500; Cabriolet, $65,000. (**5-speed transmission, power disk brakes, air conditioning** standard on all models.) (Prices include Gas Guzzler Tax of $1,800.) (Prices do not include dealer prep fee of $350.)

HONDA—Civic CRX—HF 1.5 coupe (5-speed), $6,479; 1.5 coupe (5-speed), $6,855; 1.5 coupe (automatic), $7,155; SI 1.5 coupe (5-speed), $7,999. **Civic**—1.3 3-door hatchback (5-speed), $5,399; 1.5 DX 3-door hatchback (5-speed), $6,529; 1.5 DX 3-door hatchback (automatic), $6,829; S 1.5 3-door hatchback (5-speed), $7,129; 1.5 4-door sedan (5-speed), $7,295; 1.5 4-door sedan (automatic), $7,795; 1.5 4-door wagon (5-speed), $7,195; 1.5 4-door wagon (automatic), $7,495; 1.5 4WD wagon (5-speed), $8,649. **Accord**—1.8 3-door hatchback (5-speed), $7,895; 1.8 3-door hatchback (automatic), $8,445; 1.8 4-door sedan (5-speed), $8,845; 1.8 4-door sedan (automatic), $9,195. **Accord LX**—1.8 3-door hatchback (5-speed), $9,095; 1.8 3-door hatchback (automatic), $9,445; 1.8 4-door sedan (5-speed), $10,295; 1.8 4-door sedan (automatic), $10,645. **Accord SE-i**—1.8 4-door sedan (5-speed), $12,945; 1.8 4-door sedan (automatic), $13,295. **Prelude**—1.8 coupe (5-speed), $10,345; 1.8 coupe (automatic), $10,695. (**Power disk brakes** standard on all models. **Power steering** standard on Prelude and Accord models except base Accord hatchback with 5-speed. **Radio** standard on Accord LX, Accord SEi and Prelude. **Air conditioning** standard on Accord LX 4-door and Accord SEi.) (Prices include dealer prep fee.)

ISUZU—I-Mark—4-door sedan (5-speed), $6,785; 4-door sedan (automatic), $7,149. **Impulse**—Coupe (5-speed), $11,048; coupe (automatic), $11,463. **Trooper II**—Sports-utility vehicle (4-speed), $8,683. (**Power disk brakes** standard on all models. **Power steering, radio, air conditioning** standard on Impulse.) (Prices include dealer prep fee.)

ISUZU P'UP PICKUP TRUCKS—2-wheel drive, gasoline engine—Standard bed (4-speed), $5,775. Deluxe standard bed (5-speed), $6,519; Deluxe standard bed (automatic), $6,851; LS standard bed (5-speed), $7,295; Standard long bed (4-speed), $5,930; Deluxe long bed (5-speed), $6,674; Deluxe long bed (automatic), $7,006; LS long bed (5-speed), $7,450. **4-wheel drive, gasoline engine**—Deluxe Standard bed (4-speed), $8,189; LS Standard bed (4-speed), $8,965; Deluxe long bed (4-speed), $8,344; LS long bed (4-speed), $9,120. **2-wheel drive, diesel engine**—MPG (4-speed, N/A California), $6,540; MPG (5-speed, California only), $6,540; Deluxe standard short bed (5-speed), $7,284; Deluxe standard bed (automatic), $7,616; Standard long bed (5-speed), $6,695; Deluxe long bed (5-speed), $7,439; Deluxe long bed (automatic), $7,771; LS long bed (5-speed), $8,215. **4-wheel drive, diesel engine**—Deluxe Standard bed (4-speed), $8,954; LS Standard bed (4-speed), $9,730; Deluxe long bed (4-speed), $9,109; LS long bed (4-speed), $9,885. (**Power disk brakes** standard on all models. **Radio** standard on Deluxe models with 2-wheel drive and on all LS models.) (Prices include dealer prep fee.)

JAGUAR—XJ-6—4-door sedan, $32,250. **Vanden Plas**—4-door sedan, $35,550. **XJ-S**—Coupe (V-12), $36,000. (**Automatic transmission, power steering, power disk brakes, radio, air conditioning** standard on all models.) (Prices do not include dealer prep fee of approximately $250.)

LAMBORGHINI-Countach LP500—Coupe (5-speed), $99,500; **Jalpa P250**—Targa coupe (5-speed), $53,125. (**Power disk brakes, radio, air conditioning** standard on both models.) (Prices do not include dealer prep fee of $2,000.)

LOTUS—Turbo Esprit coupe, $48,749. (**5-speed transmission, power disk brakes, air conditioning** are standard.) (Price includes Gas Guzzler Tax of $1,000.) (Price does not include dealer prep fee of $350.)

MASERATI—Biturbo—Coupe (5-speed), $26,874; E Type coupe (5-speed), $27,902. **Quattroporte**—4-door sedan (automatic), $86,710. (**Power disk brakes, radio, air conditioning** standard on all models. **Power steering** standard on Quattroporte.) (Prices include Gas Guzzler Tax of $1,000 on Biturbo and $2,000 on Quattroporte.) (Prices include dealer prep fee.)

MAZDA—GLC Series—3-door hatchback (4-speed), $5,195; Deluxe 3-door hatchback (5-speed), $6,095; Deluxe 3-door hatchback (automatic), $6,395; Luxury 3-door hatchback (5-speed), $6,795; Luxury 3-door hatchback (automatic), $7,095; Deluxe 4-door sedan (5-speed), $6,695; Deluxe 4-door sedan (automatic), $6,995; Luxury 4-door sedan (5-speed), $7,395; Luxury 4-door sedan (automatic), $7,695. **626 Series**—Deluxe 2-door sedan (5-speed), $8,845; Deluxe 2-door sedan (automatic), $9,225; Deluxe 4-door sedan (5-speed), $8,-

The first Subaru designed to accelerate your pulse rate.
Subaru humbly presents the fastest looking, fastest driving car we've ever created.
A car that combines superb aerodynamics, front wheel drive or an "On Demand"* four wheel drive system, turbo and state-of-the-art technology with the traditional Subaru traits of dependability, affordability and proven customer satisfaction.
The Subaru XT Coupe.*
It's everything Subaru has always been. And everything it's never been.
THE 1985 SUBARU
Inexpensive. And built to stay that way.
Seat belts save lives.

Money miser

Lowest-priced '85 model import car is Subaru's standard two-door hatchback with four-speed manual transmission and 1.6-liter engine. The price sticker reads $5,118.

Adamson appointed

TAMPA.—Jodi Adamson has been named parts manager for Tampa Volvo. A veteran of the U.S. Air Force, she has been with the dealership 3½ years.

Have you heard the one about the traveling sunroof salesman?

It's no joke. You can go far selling American Sunroof Company open-air systems – all the way to Palm Beach or San Francisco or New Orleans, even to Jamaica. Beginning January 1, 1985, all dealership salespersons can earn free round-trip coach tickets to anywhere Eastern Airlines flies in the 48 contiguous states plus San Juan, Montego Bay, and Kingston. Thats up to a $900 value per ticket. For every five ASC electric sunroofs* you sell, you get your choice of destinations. And there's no limit to the number of trips you can earn before the program ends on March 31, 1985. ASC makes it easy for you to get where you're going – four ASC electric models, including the state-of-the-art retracting and venting ASC II, give you a sunroof to fit almost any car. Plus, the American Sunroof Company name (the best-known name in the business) means instant customer recognition and acceptance for quick and easy sales. Free airfare to almost anywhere in the U.S. and quality products backed by years of sunroof experience – with American Sunroof Company, you can write your own ticket. Contact your local ASC installing associate today for complete details, destinations, and conditions. (See list at left). The traveling sunroof salesperson? It could be you.

Tally passes 200

Import model count is on a roll

By John K. Teahen Jr.
Managing Editor

The number of models of imported cars available to U.S. buyers has climbed above the 200 mark.

The annual *Automotive News* tabulation found 216 models in the lineups of the leading imported makes. The figure compares with 199 at this time last year, and it continues a steady, although not uninterrupted, advance over the past several years.

Here are the totals for other recent years:

March, 1983	188
March, 1982	180
March, 1981	181
March, 1980	156
March, 1979	158
March, 1978	150

The 216 models in this year's count are offered by 30 makes. Those makes account for virtually all of the imported cars sold in the U.S.

The 1985 list has four newcomers. Chevrolet Spectrum and Sprint, both from Japan, are new, and so is the Merkur, which Lincoln-Mercury imports from Germany.

Also added to the "leaders" this year is Italy's Maserati. Low volume kept Maserati off the list in the past, but the arrival of the Biturbo coupe has boosted its sales to a higher level.

Toyota leads the imports with 31 models, and Nissan is second with 24.

When it comes to country of origin, it's no contest. There are 127 Japanese models on the U.S. market. West Germany is a distant second with 38, followed by Sweden, 17; France, 14; Italy, 12, and Great Britain, 8.

The domestic makers offer considerably more choices than the imports—291 to 216—but there are similarities in the model mixes. Here are the totals:

	Imports	Domestics
Four-dr. models	85	107
Two-dr. models	95	133
Convertibles	9	13
Four-dr. wagons	27	38
Totals	216	291

Four-door sedans or hatchbacks make up 39 percent of the import total and 37 percent of the domestic. There's also a two-point spread in two-door models, but this time it's the other way around: 44 percent of the import selections are two-doors, compared with 46 percent for the U.S. cars.

Convertibles provide 4 percent of the choices in each group, and station wagons make up 13 percent in each camp.

Some of the imports and some of the domestics call their hatchbacks "three-door" or "five-door" models, but only side doors are counted in this tabulation. The same applies to "five-door" wagons. They're four-doors here.

And Targa-type cars are counted as coupes, not convertibles.

In counting import models, Automotive News uses the same crtiteria as in tabulating U.S. cars. A choice of transmissions (4-speed, 5-speed or automatic) or a choice of engines (gasoline or diesel) does not necessarily constitute a separate model. And vans are excluded from the count for both imports and domestics.

Turbo units are counted separately when they are priced that way. It is felt that they have enough differences in trim, equipment and mechanicals to merit the separate-model designation.

As noted, Toyota (31) and Nissan (24) have the most models among the imports. Following them are Subaru, 16; Mitsubishi, 15; Mazda, 14; Peugeot, 11; Volvo, 11, and Honda, 10.

Totals for other leading import makes are: Mercedes-Benz, 9; BMW, 8; Volkswagen, 8; Audi, 7; Saab, 6; Dodge Colt, 5; Plymouth Colt, 5; Porsche, 5; Rolls-Royce, 5; Ferrari, 4; Alfa Romeo, 3; Jaguar, 3; Maserati, 3; Renault, 3; Spectrum, 2; Isuzu, 2; Bertone, 1; Sprint, 1; Dodge Conquest, 1; Plymouth Conquest,1; Merkur, 1, and Pininfarina, 1.

The U.S.-made models of Honda, Renault and Volkswagen are not included in the import total. The VW Golf and GTI, the Renault Alliance and Encore and the Honda Accord, Accord LX and Accord SEi are counted in the domestic total.

Another dozen import models are excluded from the count because of extremely low volume. For the record, those makes and the models offered are Aston Martin, 4; Bentley, 3; TVR, 2; Lamborghini, 2, and Lotus, 1.

MODELS OFFERED BY LEADING IMPORTS

(As of March 1, 1985)

	4-Door Models	2-Door Models	Convertibles	4-Door Wagons	1985 Totals	(Totals, March 1, 1984)

Making the list

The German-made Merkur XR4Ti, above, is one of three new nameplates on the 1985 import list. The other two additions are Chevrolet imports from Japan, the Sprint and Spectrum.

Decision due by June

Volvo ponders new plant

It looks as if AB Volvo is set to build another car factory, for two good reasons. The Swedish auto maker can barely squeeze more production out of its existing facilities; and it has a long waiting-line of would-be customers.

The company's innate conservativeness is personified in the announcement: "Volvo considers new car plant in Uddevalla, Sweden." Its competitors seem dynamic in comparison. Daimler-Benz AG recently commissioned a new factory in Bremen, West Germany. BMW AG is building a car assembly plant in Regensburg, West Germany. Saab-Scania AB plans to increase production in Sweden nearly 50 percent during the next three years.

Volvo management fears the prospect of increasing its production capability beyond the break-even point.

Volvo announced that group income before taxes and allocations in 1984 doubled to SEK 7.63 billion ($830 million) on sales that fell 12 percent to SEK 87.2 billion ($9.5 billion). The sales decline was attributed to a cutback in oil trading and to the fact that two of the group's companies were not consolidated last year. Excluding those areas, sales increased 22 percent over 1983.

Car sales income climbed 20 percent to SEK 30.25 billion ($3.3 billion). Trucks jumped 36 percent to SEK 15.3 billion ($1.67 billion).

The factory Volvo is considering would be able to make 40,000 passenger cars annually on a single-shift basis. It would be a complete facility with body, paint and final assembly areas. Volvo estimates it would employ more than 1,000.

A final decision will be made by June. Planning and construction would take 30 to 40 months, meaning Uddevalla, 55 miles north of group headquarters at Gothenburg, could be operating in 1988.

Total Volvo production last year was 379,500 compared to 372,400 in 1983.

Volvo Car's consolidated sales totaled Fl 1.8 billion ($500 million), up 13 percent from the previous year. Profit climbed about 15 percent to Fl 16 million ($5.5 million).

$300 million ad budget

Toyota jumps for joy

By Joseph Bohn
Marketing Editor

Toyota Motor Sales U.S.A. Inc. gets quite a feeling every time it runs an ad campaign. That's because it has nearly $300 million worth of advertising support to draw on.

At the national level, there's a budget of nearly $100 million. Toyota dealer associations spend another $90 million, according to Robert McCurry, senior vice president in charge of sales, marketing, distribution, public affairs, parts, service and customer relations. Individual dealers spent on average another $125 per vehicle, equal to about $102.8 million based on 822,000 vehicle sales last year.

The multi-tiered approach is important for a marketer like Toyota because its buyer demographics and sales penetration vary widely throughout the U.S. In Los Angeles, for example, where imports account for 55 percent of new-car sales, Toyota is tops; but in Detroit, where import penetration is six percent, Toyota is nowhere near the giant it is on the West Coast.

"So our philosophy is a little different. We try to do what each market can do and can afford," says McCurry, who recently addressed the Adcraft Club of Detroit, in the city where he spent 28 years with Chrysler Corp.

Problems of TV clutter are universal, McCurry says, noting that in the last five years the auto industry produced over 10,000 different commercials. Research by Toyota's agency, Dancer Fitzgerald Sample, revealed that on one weekend, TV stations in Los Angeles ran 855 car-truck commercials—an average of 18 an hour.

That's why Toyota strove so hard to create an identity with its "Oh, what a feeling," jump-for-joy commercials. It's also why the company looks for different ways to say things, as in the new MR2 car ads where fun, not performance, is the key word.

These days Toyota is moving a bit more upscale with cars like Cressida, launched last October in the $15,000-plus luxury sedan market, and MR2, recently introduced as the company's first true sports car for the U.S. market.

James H. Lindsey, chairman of Dancer Fitzgerald Sample's California office and management director on the Toyota account, points to golf sponsorship as a new promotional area for Toyota, which signed pro golfer Lee Trevino as ad spokesman. Golf sponsorships typify the somewhat greater emphasis on top-of-the-line models and older-age buyers the company seeks as it moves upscale, Lindsey says.

Along with the MR2 launch, Toyota is pumping up ad volume on the cargo version of its van this spring. The passenger version has been well received and ad support for it will continue as Toyota seeks to hype up the utilitarian unit. Toyota hopes to sell 20,000 cargo vans this year, but objectives are only that within the limitations of the import-quota agreement.

Still, Toyota continues to sell vehicles like there's no tomorrow. It had a five-day supply of vehicles in inventory in early February. Trucks, as important as ever, are accounting for about 40 percent of Toyota's ad support. Toyota, king of the compact truck market, expects to sell 300,000 in 1985, up from 255,000 last year.

Handcuffed on cars, the Japanese created a new alternative market with compact pickups. Their aggressive merchandising and advertising have made pickups practically the lowest-priced vehicles available, and emphasis on fun and versatility has added to their appeal.

McCurry stresses, however, that a company is perceived as its cars are perceived, and "advertising must consider that, with the company and its products reinforcing each other; but even the best advertising can't save a bad product, and that seems unfair because bad advertising can sure screw up a good product."

Japanese companies are strong marketing companies, which is why their dealers are able to sell their products quicker and at a better profit than their American counterparts, McCurry contends, noting that Japanese management is "from the bottom up," starting with the consumer, moving up through the dealer, then to the company where the bottom-up philosophy continues.

Volvo and Clark work on forming new company

GOTHENBURG, Sweden.—Ongoing negotiations between Volvo BM and Clark Michigan have resulted in a preliminary decision to form a new joint company.

The new concern will be one of the largest in the world for contractor equipment and is expected to have annual sales approaching $1 billion. The joint company will be based in the Netherlands and managing director will be Eric Johansson, now manager of Volvo BM. The final deal is subject to government approval in the countries involved.

Chevy, Rinaldi sign

SHENANDOAH, Pa.—R.V. Rinaldi has signed with Chevrolet for Vito Rinaldi Chevrolet, Inc.

Sixes and sevens

Mercedes sold over 4,000 Class 6 and 7 trucks wholesale and 3,500 were retailed in the U.S. last year.

Imports look for a piece of the action

Muscling in on medium trucks

By Arthur Flax
Assistant Truck Editor

Although domestically built trucks dominate the U.S. medium-duty market, offshore competitors have tried to make inroads. They haven't gotten far.

Offshore truck makers aren't discouraged, however. They look at the more than 90 percent market held by Ford Motor Co., General Motors and International Harvester Co. as a great opportunity.

So far most offshore competition in the medium market has come from Europe, but now Japanese manufacturers are entering the race. Isuzu entered the market with a Class 3 commercial truck sold by its own distributors and a Class 6 truck marketed by Chevrolet and GMC.

In 1984 General Motors sold almost 700 Chevrolet Tiltmaster and 600 GMC Forward trucks built by Isuzu Motors Ltd., Japan. Michael H. Erdman, Chevrolet marketing manager-trucks, projects about 3,000 Tiltmaster sales in 1985. He says, "The reason Chevrolet is importing the truck is simple—we want to get more market share. GM also owns 34.2 percent of Isuzu and wants to take advantage of that connection."

Hino Motors (U.S.A.) Inc., which entered the U.S. market in five southeastern states last year, recently announced plans to expand its distribution network to California, Texas, Louisiana and 10 eastern states from Virginia to Massachussetts.

Mitsubishi Motor Corp. is planning to introduce its Fuso FK/FN Class 6 and 7 diesel trucks in the U.S. this fall through an independent dealer network. To be based in the eastern U.S., the new truck operation expects to sell 3,000 to 5,000 units per year and will run separately from MMC and Chrysler car and light truck channels. Marketing will start in the northeast and gradually expand to the Gulf states.

The company said it is looking for existing commercial truck dealers to carry the Fuso line.

Nissan Diesel America Inc. has set up headquarters in Irving, Tex., but has yet to introduce a commercial truck in the U.S. Nissan manufactures trucks with gross vehicle weights from 20,000 to 100,000 pounds.

The medium-duty market covers Class 4 through 6 trucks, but lighter Class 3 and heavier Class 7 vehicles can overlap into medium-duty applications.

Import truck makers face the tough task of breaking into the predominantly gasoline-powered Class 3-5 market. To cut a swath there, import manufacturers must sell U.S. customers on the advantage of diesels over gasoline engines in the face of easing fuel prices.]

Isuzu slipped into the lighter end of the market with a Class 3 vehicle. Steven M. Allen, vice president and general manager of Isuzu Trucks of America Inc., believes the new KS22, introduced in October, will appeal to many truck customers currently using U.S. van cutaways with cargo boxes. The van-based vehicles, Allen claims, are registered as Class 2 units but have been upgraded to handle Class 3 (10,001-14,000 pounds gvw) loads. Some 10 percent of the Class 2 market and all of Class 3—some 130,000 to 150,000 vehicles—are commercial units, and that's where Isuzu sees an opportunity to sell its KS22.

Allen says, "We see an opportunity because U.S. manufacturers have left the Class 3 to 5 market and there's still demand for those classes." The diesel-powered Isuzu KS is designed like a heavy-duty truck with a reinforced ladder frame. Isuzu has sold about 600 of them to dealers, who have retailed about 200.

Isuzu plans to retail some 4,000 KS trucks in 1985 and 7,000 in 1986. Allen predicts they will have strong demand in air and local freight industries, with about 20 percent of sales going to companies that deliver products to the construction industry.

Isuzu also plans to import other trucks, according to Allen. By the end of 1985, he says, Isuzu expects to market its Class 6 truck now imported by GM. A Chevrolet spokesman says GM has "no problem with that." Chevrolet officials believe a strong dealer body gives their division a marketing edge.

Plans to market an Isuzu heavy-duty truck also are under consideration, but that's at least three years away, Allen says. A Class 8 Isuzu tractor was displayed at the American Trucking Assns. convention last October to position Isuzu as a maker of heavy trucks.

Early this year Isuzu Trucks of America cut its affiliation with American Isuzu Motors Inc., U.S. distributor of Isuzu cars and compact trucks, and is now a direct subsidiary of Isuzu Motors, Japan. The truck firm has franchised about 75 dealers and plans to have about 250 in every region of the U.S. except Alaska by the end of 1985, according to Allen.

Iveco Trucks of North America Inc. is aiming at the Class 3 through 5 market with its Z-Range line of cabover straight trucks. James R. Bostic, president, says, "In recent years there had been no domestic offerings in these classes." Domestic manufacturers left the market, he says, because it became more cost efficient to build Class 2 vehicles on passenger car components and to share components between Class 6-8 vehicles.

The Class 2 through 5 commercial truck market currently supports 150,000 to 160,000 truck sales a year, according to Bostic, who predicts sales in those classes will grow five percent in 1985. He projects 202,000 commercial Class 2-5 sales a year by 1990 compared with 100,000 to 110,000 Class 6 and 7 sales by that time.

Bostic claims the Class 3-5 market is the fastest growing in the industry, saying, "There are three to four million potential customers—the non-industrial backbone of the economy such as auto supplies, florists, linen companies and computer stores."

Iveco's entry has encouraged competition, both domestic and offshore, according to Bostic, who says he welcomes it: "Our worst problems have been brand loyalty and product awareness. You see situations where a buyer says he's always bought Fords, as his father did before him. Iveco has a strong lower-cost-of-ownership story to tell; as the competition fosters greater awareness of alternatives, it'll be impossible to ignore Iveco."

Of the Japanese, Bostic says, "They have size and resources, but there are things our product can do that the Japanese cannot." He says Japanese and U.S. trucks can beat Iveco on initial cost, but Iveco can compete on cost of ownership: "Our truck is more expensive to buy, less to own."

Bostic also sees a change in the way freight is moved that will benefit Iveco. "What we're seeing is a breaking down of larger loads

into smaller loads—unconsolidating. Just-in-time (shipment of parts to auto makers) is a perfect example. Thinking has become entirely different. It's changing to smaller loads, shipped more frequently."

Iveco trucks are assembled in Italy, but Bostic predicts knocked-down units will be assembled in the U.S. before the end of the decade. "It's all a function of volume," he says. "When we reach a certain critical mass, we'll go to (knocked down) assembly here. The company position is that when annual sales hit 10,000 units, we'll go to fully integrated manufacture."

In 1984 Iveco sold a company-record 3,452 trucks to dealers in the U.S. and retail sales were up 31 percent over 1983. Bostic predicts the company will sell at least 4,000 units in 1985.

Among those fighting for a piece of the heavier Class 6 and 7 truck market are Mercedes-Benz, Volvo and Renault. All three have an established presence in the U.S.—Volvo with Volvo White Truck Corp., Mercedes-Benz with Freightliner Corp. and Renault with controlling interest in Mack Trucks Inc. Officials of all three companies say their targets are U.S. manufacturers, not each other.

Peter Rupp, president and chief executive officer, Mercedes-Benz Truck Co., says, "We watch Renault and Volvo, but if we are to add to our success, we must get into the traditional North American market."

Class 6 and 7 sales are expanding faster than Class 8. In 1984 Class 8 sales were 137,000 units compared with 133,000 in Classes 6 and 7. "It's already close," Rupp says. "In previous years it was predominantly Class 8. We see a crossover."

In 1984 Mercedes sold over 4,000 Class 6 and 7 units wholesale and 3,500 retail. Rupp says sales were inhibited by lack of supply: "In a market of 133,000, that's simply too small. This year our target is 5,000 units."

He adds, "If we can't double our (sales) quantity (to 10,000 units) in four to five years, I should be fired. We've got the force to do it." Mercedes' plan, Rupp says, is to increase its number of truck offerings. The company will introduce the 1525, a 250 horsepower Class 7 tractor, in April.

Mercedes embarked on a product improvement program two-and-a-half years ago to "Americanize" its vehicles, Rupp says. Since then the company has made engine, cab, frame and braking improvements. Rupp claims Mercedes is competitive in spare-parts pricing with U.S. trucks, and has 99 percent parts availability.

Mercedes assembles knocked-down trucks, shipped from Brazil, in Hampton, Va., and uses 16 percent U.S. components. The company is increasing local content in order to respond more quickly to market demand. Also, it is cheaper to add certain parts here, and U.S. assembly with locally built components allows Mercedes to customize its trucks. Rupp says, "We build an integrated truck, but one that is flexible to the U.S. market."

Mack Trucks imports the Renault-built Class 6 and 7 Mid-Liner fully assembled, but it contains U.S. components such as filters, rear axles and transmissions. Selling the Mid-Liner, says Joseph P. Rossetti, Mack Trucks executive vice president-marketing, helps Mack distributors weather the peaks and valleys of the truck market. The Class 6 and 7 market, he notes, has been more stable than Class 8 the past several years.

Mid-Liner customers, Rossetti says, include beverage and fuel haulers, fleets and the pickup-and-delivery market.

Rossetti breaks down the Class 6 and 7 sector into about 66,500 diesel vehicles in a 130,000-unit market. He says Mack had about 8.2 percent of the diesel market, or 5,468 units, in 1984 and about 50 percent of the low-cabover diesel market in Classes 6-7.

He says 1984 medium-duty diesel sales finished about 4,000 units stronger than antcipated. Mack predicts about the same or somewhat better medium-duty sales in 1985. Rossetti says the market probably will support more Class 7 and fewer Class 6 sales in the future, and is undergoing a shift from heavier to lighter Class 8 trucks.

Capitalizing on that trend is Volvo White Truck Corp. Dave Wilson, vice president of marketing, says, "Class 6 is coming off a high in the mid-'70's of 250,000 units. In our perspective, Class 7 is where the action is. As a company, Volvo White has focused on Class 8 and 7. We made a decision not to participate in Class 6."

In Class 7 Volvo sells the low cabover F-6 which Wilson says "fits in with the growth of diesel. We aim the F-6 at segments that really need a truck that has the beef." The F-6 is popular in the food, leasing, retail and wholesale-delivery businesses that Wilson calls "private segments with higher than average mileage." Volvo sold 1,482 F-6 trucks and tractors in 1984 compared to 1,104 in 1983.

Volvo anticipates further growth in Class 7 as the economy expands and the need increases to deliver products from warehouse to retail delivery point. The 12 percent excise tax charged to buyers of trucks over 33,000 pounds and all tractors is also a positive factor for the Class 7 truck market.

Volvo also offers a Class 8 truck, the F-7, as an alternative to Class 7 vehicles. The F-7, sold principally as a tractor, is a dual-purpose unit designed for city and interstate use.

"Typically, a mid-range tractor isn't strong enough to do the job in the city and also have to travel on the interstate," Wilson says." The F-7 competes in Class 7 at a premium price. About 600 were sold last year.

Mercedes' Peter Rupp

"We must get into the traditional North American market."

Sound reasons to ask for Sony:

Sony is a **SOUND PRODUCT.** From stereo cassettes and digital discs to mobile video. Your customers count on that famous Sony quality and reliability built into every unit. That's why the vans with built-in Sony products earn their **SOUND SATISFACTION.** And that, quite naturally, leads to **SOUND SALES.** As only Sony can generate them. So, ask for Sony from your van supplier. It's priced right. And it's Sony.

SONY®

The Sound Profits.

Imports pass $200 million

TV ad spending climbs

Television advertising spending on imported cars and trucks climbed in the first three quarters of 1984, but not as much as it will if quotas on Japanese cars are lifted this year. A free market for the Japanese would heighten both sales competition and TV ad spending.

In January-September 1984, 13 major importers spent $222.6 million in network and spot TV, up from $193.1 million the previous year. Spot TV continues as the favorite. Importers spent $119.7 million in spot, up from $109.3 million in 1983. Network spending jumped to $102.9 million, up from $83.8 million in 1983.

Nissan and Toyota continued to dominate TV spending, but their use of network versus spot shows a marked difference in approach. Nissan spent its budget almost evenly divided between network and spot while Toyota concentrated mainly on spot advertising.

J. D. Power study outlines AutoSegmentation

Auto-phile or auto-phobe?

By Matt De Lorenzo
Los Angeles Reporter

Although demographics are a benchmark tool for marketing, people with similar income, education and age can have different ideas or attitudes about cars. The study of those differences, called pyschographics, is on its way to becoming another important measure in determining car-buying patterns.

In a survey of car owner attitudes, J.D. Power & Assoc. has developed AutoSegmentation, which groups car buyers in six categories based on their perceptions and general feelings toward automobiles. Demographics then are drawn from the sample and interesting patterns can be observed.

The six categories developed by Power are auto-philes, comfort seekers, necessity drivers, sensible centrists, auto-cynics and auto-phobes.

Auto-philes are enthusiasts, likely to service their own cars and are knowledgeable about them.

Comfort seekers also like cars, but prefer larger, more comfortable makes and don't do their own service work.

Necessity drivers are car haters who don't take pleasure in owning or driving one and would just as soon do without.

Sensible centrists—courteous drivers who look for fuel economy and price when buying cars—see vehicles as functional objects and stay away from sporty or flashy types.

Auto-cynics think driving is fun, are fairly knowledgeable about cars, like sporty looks and don't admit to liking any product very much. The group includes independent types, baby boomers and cynical youth.

Auto-phobes generally let others do the driving and are safety concious. They don't necessarily dislike cars, and lean toward large ones.

The three largest groups are auto-philes, representing 24 percent of the sample, sensible-centrists (20 percent) and comfort seekers (17 percent).

According to the *Power Newsletter*, auto-philes have the greatest proportion of males, lowest median income and second-lowest median age. They are among the most likely to own a domestic vehicle and are highest of all groups in purchasing used vehicles, pickups and sport/utility four-by-fours.

Sensible centrists, representing "quintessentially average middle Americans," have the highet median age (49) of any group, second- lowest median income, are more likey to own a four-door sedan and have the largest-size families, and are third most likely (22 percent) to own imports.

Although comfort seekers like cars, they are not very knowledgeable about them. This group is second in median household income at $28,700, first in median purchase-price of cars at $12,900, has the highest percentage of new car purchases and a high level of domestic-vehicle ownership.

In the three smaller groups—auto-cynics, necessity drivers and auto-phobes—import penetration is highest in two: auto-cynics (28 percent) and necessity drivers (29 percent).

Auto-cynics, the youngest group with a median age of 32.8, are most likely to own two-door and sporty vehicles, and a high proportion of vans.

Necessity drivers have the highest educational level (62 percent attended college), and their median income is third highest ($27,-800). They represent only 13 percent of the general automotive population, are likely to live in urban areas and "have the highest incidence of station wagon ownership, as well as ownership of imports and four-cylinder vehicles," according to the study.

Auto-phobes are predominantly women (85 percent), have the highest median household income ($29,200), are most likely to be married and have the highest rate of automatic transmission purchases.

However, the auto-phile, a heavy domestic buyer, may continue to buy up as income increases.

Power concludes that dealers should heed the different attitudes and expectations revealed in the study: "Reading the prospect accurately—and that probably means listening, above all else—is the only way to successfully steer them toward an appropriate choice."

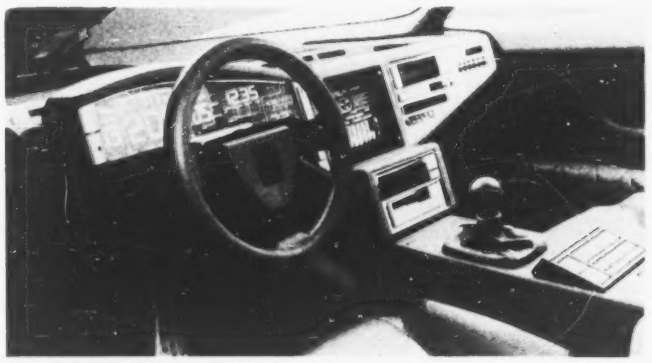
Dreaming on a Quasar

Part dream, part reality, the Peugeot Quasar is a vision of the future anchored in the realities of today's most advanced technologies. Quasar, a concept car making its U.S. debut, uses kevlar and carbon fiber body construction and has a twin-turbo version of the company's 16-valve competition engine.



Ready for takeoff

Created at Peugeot's La Garenne Advanced Research Center, the Quasar is the first Peugeot concept car ever to be publicly displayed. The space-age interior features advanced Clarion electronic instrumentation, navigation system and a component entertainment package.

Sports and autos, a dynamic duo

ESPN auto advertising up

By Joseph Bohn
Marketing Editor

Automotive companies, including importers Nissan, Mazda and Honda, are the biggest category of advertisers on ESPN, the cable sports network.

The network's automotive advertising revenues, while still a modest $8 million in 1984, are growing by leaps and bounds, according to J. William Grimes, president and chief executive officer of ESPN.

Basically, the network's pitch is that it can deliver a more upscale (higher income, better educated) male audience than major networks at half the cost per thousand.

In 1985 it will carry 60 auto racing events, 18 tennis tournaments, 24 live weekend golf tournaments and a raft of college football, basketball and other specialized sporting events.

Looking ahead, Grimes believes ESPN will be economically sound enough to make an attractive proposal to the National Football League for a cable game of the week in 1987 when NFL contracts with the three networks expire. He also believes, because of parent ABC's deal for exclusive television rights to the 1988 Olympic Games, that ESPN will be able to bring some live action coverage to its subscribers.

In July ESPN will carry 168 hours of re-edited 1984 Olympic Games, and will start a new 13-week live bowling series.

Generally, auto companies like that kind of sports programming. As the number of cable subscribers and viewing audiences has grown, so has automotive participation.

Cable is now in 38 million homes, up from 28 million in 1982, Grimes says. Basic cable's share of cable viewing has increased to 13 percent on a weekly basis from eight percent two years ago, and advertising has jumped to $470 million the past two years, a 135 percent increase.

Household viewing averages 437 minutes a week per cable home, according to Grimes. He acknowledges there are some clouds on the horizon. One is the problem of getting additional cities like Detroit wired for cable. He points to Pittsburgh as a recent example of how renegotiations can resolve that problem.

He also notes an alarming increase of sports programming on TV, which tends to fragment audiences. However, CBS and ABC reductions in what they were willing to pay for college football last year is the harbinger of a positive trend, Grimes believes.

As the supply of sports programming increases and demand for individual programs decreases, the cost of telecast rights will level off. This will benefit sports programmers, advertisers and viewers alike.

Grimes says the issue of declining sports popularity is debatable. A *USA Today* poll of college football viewers, for example, shows 60 percent were "very" or "somewhat" satisfied with viewing the games, and a Nielsen rating indicates viewing of college football games increased from 15 million in the fall of 1983 to 16 million last fall.

Two separate markets, research firm says

Import-U.S. buyer profiles steady

By Matt De Lorenzo
Los Angeles Reporter

Despite strong domestic-car sales and limits placed on Japanese imports, differences in buyer demographics have not narrowed between import and U.S.car buyers, according to a market research firm that suggests there are two separate car markets—import and domestic.

Even though Detroit has introduced products designed to appeal to young upscale buyers, J.D. Power & Associates has found "there is still a full 11-year difference between the median ages of domestic-car buyers (46 years old) and Japanese-car buyers (35 years old) and a nine-year difference between the median ages of domestic and European-car buyers (37 years old)."

The study also found that 41percent of domestic-car buyers are over 50 years old compared with 21 percent of import buyers.

The gap also extends to income. Buyers of Japanese imports have a median income of $37,480 compared with $35,310 for domestic-make buyers. However, those numbers pale in comparison with the figure for European-import buyers who have a median income of $57,570 and paid a median price of $17,500 for their cars.

Power said these demographics have changed little in relation to each other over the past four years. Although car prices and income levels are higher than in 1981, relative positions between the groups have remained stable. Since the majority of cars sold in the U.S. are domestics, their demographics are likely to be closer to the total industry norm; but imports have a decided edge in the youth market that Detroit would like to crack into.

Regarding that, Power said,"There is little brand loyalty in the marketplace, and Japanese-car buyers have the least of all. So there is an opportunity to put some of those buyers into domestic cars."

But the toughest sell, Power said, will be precisely those Detroit wants most—the more educated and affluent, who tend to be less favorable about buying American.

"An even tougher sell may be going after upscale professionals who have purchased a European import," Power said. "For example, putting a BMW enthusiast/owner into a domestic car promises to be extremely difficult if the perception has long existed that there is no domestic car comparable to a BMW."

Demographics of BMW buyers are the cream of the crop with a median age of 35 and median household income of $61,000.

Said Power: "Realistically, domestic manufacturers and their dealers probably should focus less on winning back import owners—at least in the near term—and concentrate instead on the buyer who might have been headed in an import direction. The message for the import side is that the domestics will be actively pursuing this market with more-competitive products, and competition could heat up several years out."

4WD sales in Japan rise 40 pct.; midgets pace gain

TOKYO.—Sales of four-wheel-drive vehicles increased 40 percent in Japan last year. However, almost all the growth was for the tiny 550-cc midget vans and trucks.

This year, a different situation is expected as a number of makers, led by Nissan and Toyota, introduce 4WD passenger cars aimed at the sporty end of the market.

Registrations in the midget class amounted to 298,000 units, up 32 percent over 1983. The biggest selling 4WD vehicle was the Suzuki Carry van and truck with 60,000 units, ahead of the Subaru Sambar van/truck with 55,000. Next came Daihatsu's van/truck with 48,000 sales.

Among passenger cars, Subaru's 1600/1800 continued its position as the best-selling 4WD with 21,000 registrations against 19,000 for its 550-cc Rex and 17,-500 for the Toyota Tercel 4WD.

The little Subaru J-10 accounted for 16,900 sales in 4WD form, and the Subaru Domingo forward-control 1,000-cc van was next with 11,900 sales, just ahead of the Suzuki Alto 550-cc hatchback at 11,000 units.

Overall, Subaru sold 124,400 4WD units; Suzuki sold 86,800, and Mitsubishi and Daihatsu both sold more than 57,000. Honda sold 47,000 units, almost all of which were 550-cc vans and trucks, while Toyota sold 33,000.

Peugeot expands dealer ad groups, 'lifestyle' series

LYNDHURST, N.J.—Peugeot Motors of America will refine its advertising campaign this model year, with increased exposure in upscale magazines and greater use of the company's new dealer advertising groups.

"Upscale magazines have produced very well for Peugeot and are most efficient in reaching our target audiences," said John DeWitt, Peugeot national advertising manager. "We will build on that success and the success of our lifestyle themes by increasing our exposure in lifestyle magazines during the coming year."

The company's dealer ad groups, formed last year, will be expanded, Peugeot said.

"Peugeot created a cooperative advertising program to enable dealers to capitalize on our national effort with a complementary local one, and we encouraged the development of dealer groups so they could make maximum use of the available co-op dollars," DeWitt said. "The yield to dealers has been very high, and we will continue in that direction."

Dealer groups in Houston, Chicago, Los Angeles and Boston are using about 80 percent of their available co-op funds, Peugeot said. The development of dealer groups in other local areas with strong growth potential will be considered in the coming months, the importer said.

Peugeot's lifestyle campaign, now in its second year, was created by Ogilvy & Mather.

Hughes named partner in Toyota dealership

ANGLETON, Tex.—Roger D. Hughes, formerly general manger of Jack Whittemore Toyota here, has become vice president and partner in the dealership.

Before coming to the Angleton dealership, Hughes was president of Roger Hughes Chevrolet-Olds, Elwood, Ind.

March 28—Butler Auto Auction, Gibsonia, Pa., and Arena Auto Auction, Chicago.

Offshore assembly remains a possibility

Chrysler shoots for 'Saturn' car

Continued from Page 2

close to the program, Chrysler now is planning a car with a conventional sheet-metal structure, assembled with a variation of the so-called "modular" technique.

Large subcomponents would be fabricated by outside manufacturers and brought to a central assembly site. Earlier, Chrysler was considering an integrated plant that could form a molded composite chassis. One side effect of the modular technique is that it allows the subcomponents to be assembled at various sites, including offshore.

Chrysler executives recently left for a tour of the Far East, including Japan and Korea, and their agenda reportedly includes discussion with Korean officials about a small-car plant for Samsung, Chrysler's proposed Korean source for small cars.

Domestic car companies have been working on a trilogy of such advanced small-car programs—GM's Saturn project, Ford's so-called Alpha program and Chrysler's Concept 90 (some sources indicate the program now is referred to internally as the "Liberty project").

Although only GM's Saturn so far has made the Phil Donahue Show, reflecting a highly unusual public interest in such advanced-concept programs, Ford, Chrysler and GM are in a near dead heat in terms of getting such a low-cost car into production.

GM in fact, which is attempting organizational changes simultaneously with its car development project, may well be behind Chrysler today in terms of finalizing its Saturn car in production form, according to sources close to the program.

Each project car is a test bed of advanced manufacturing technology, and many are viewing the success of the cars as a final test of the U.S. as a competitive manufacturing base.

While the three programs resemble each other, they also reflect significant differences in approach.

GM's complex, multi-plant sourcing structure has caused the corporation to place emphasis on the costs associated with in-house components. GM also hopes its Saturn car will allow it to cut business costs, such as the cost of dealer repairs, by developing a car that could be serviced in modules by the factory.

Ford's Alpha project is reportedly a cost-review of a 1990 Escort-sized car, with manufacturing costs reduced by a combination of automated manufacturing techniques, worldwide volume and offshore engineering.

Ironically, Ford's program is likely to be a U.S.-assembled car built from offshore components. The most prominent plan at Chrysler today is a kind of mirror image, with subcomponents coming from suppliers in the U.S.

AMC to fight GM lawsuit on 4WD patents

DETROIT.—American Motors, sued by General Motors for patent infringement in federal court here, said it will vigorously defend itself.

The suit involves on-the-fly shifting from two-wheel drive to four-wheel drive and vice versa. GM said its system is covered by patents issued in 1982 and 1983. It has not been able to reach a licensing agreement with AMC, the company said.

GM contends AMC induced its supplier, Dana Corp., to copy GM devices in making 4WD mechanismns for Jeeps and Eagles.

AMC said it is studying the GM complaint and will respond in due course. It said its initial reaction is that there are serious issues of validity of the GM patents and their application to AMC products. It said it intends to defend itself.

February sales down a fraction from last year

Continued from Page 6

percent from 25.22 percent, and Honda was up to 2.07 percent from 1.59 percent. GM slipped to 53.71 percent from 57.08 percent, AMC dropped to 1.56 percent from 2.82 percent and VW stopped at 0.97 percent, down from 1.01 percent a year earlier.

Domestic-make sales were a mixed bag of pluses and minuses in February. The three Chrysler makes were up: Plymouth, up 42.39 percent; Chrysler, up 3.73 percent, and Dodge, up 34.16 percent. Ford was up 0.77 percent, Mercury was off 5.51 percent and Lincoln was up 28.69 percent.

Buick notched record sales for the second consecutive month in February, beating out the former record from 1984 by a scant 309 units. Cadillac was off 15.48 percent, Chevrolet was down 3.02 percent, Oldsmobile dropped 18.31 percent and Pontiac was down 3.94 percent.

American Motors' AMC sales were down 34.76 percent and Renault was down 46.37 percent. VW dropped 6.28 percent but Honda was up 28.10 percent.

February import sales included records for Jaguar, BMW, Saab and Volvo and increases for Nissan and Toyota. Toyota was up 8.23 percent; Nissan, 4.10 percent; Jaguar, 37.77 percent; BMW, 17.09 percent; Saab, 9.35 percent, and Volvo, 2.63 percent.

Audi sales were down for the month by 13.20 percent. Honda was down 7.43 percent; Mercedes-Benz, 0.50 percent; Subaru, 6.75 percent, and Volkswagen, 11.41 percent.

Imports expanded to 23.05 percent of the total February market from 22.14 percent the previous year. U.S. intermediates had 26.26 percent this year; compacts, 17.39 percent; subcompacts, 15.82 percent; standards, 9.68 percent, and luxury models, 7.80 percent.

Excluding imports, the February, 1985, market was comprised of 34.12 percent intermediates, 22.60 percent compacts, 20.56 percent subcompacts, 12.58 percent standards and 10.14 percent luxury cars.

Late-February domestic sales of 251,335 were best for that period since 1973, when 282,530 deliveries were reported. Chrysler was up 40.97 percent and earned 16.94 percent of the market. Ford was up 8.27 percent and had 26.11 percent of the total. GM was down 7.76 percent with 51.17 percent. Honda was up 16.46 percent and had 2.60 percent. AMC was down 45.80 percent with 1.90 percent of the total and VW dropped 7.86 percent and had 1.28 percent.

A year earlier, market shares were: Intermediates, 26.56 percent; compacts, 18.24 percent; subcompacts, 14.85 percent; standards, 10.28 percent; luxuries, 7.93 percent, and imports, 22.14 percent.

Chrysler charts post-VRA program

Continued from Page 1

will be visiting those nations in April to explore Chrysler's options.

Chrysler's total capital spending budget remains firm at $2.8 billion for 1985 and $10.5 billion for the next five years, but more of the budget will be shifted into larger cars, Iacocca said.

Beginning in 18 months, Chrysler will introduce a new luxury model every six months. Included in the "new upscale product" will be a new Imperial model, new V-6 engines, new Maserati products and new turbochargers.

Although Chrysler's new marketing strategy made it clear that the decision to let the VRA expire on March 31 will have profound ramifications for the North America car business, there was no clear consensus elsewhere on exactly what those ramifications might entail. Special interest groups, labor and their political allies were quick to denounce the decision.

UAW President Owen Bieber called the VRA termination "a severe blow to the recovering U.S. vehicle industry and especially the 2.5 million Americans and their families" whose livelihoods depend directly on a healthy auto sector.

"No less than our middle-class standard of living is at stake as America's best jobs are allowed to shift overseas," Bieber said.

Bieber, who sits on the Chrysler board of directors, was present at the meeting last Thursday when the new strategy was approved.

Following the meeting, he called the Chrysler plan a "disturbing aftershock" of the Reagan Administration decision. He called upon Congress to take action to avoid "the beginning of the end of small-car production in the U.S."

At the other auto companies, corporate officials quickly and succinctly expressed opinions on the decision, but the marketing people who must sell cars if the floodgates open were more measured in their responses.

"We have a number of scenarios but they are all in the what-if category," a Chevrolet spokesman said. "We won't know exactly what we're going to do until we see how it all shakes out and how many more cars will really be coming here from Japan."

Chevrolet, of course, plans to import up to 300,000 Japanese-built cars a year and sell them in Chevrolet dealerships. Its position in the post-VRA market could well improve if its Japanese partners Isuzu and Suzuki are allowed by the Japanese Government to increase shipments.

The General Motors corporate response said President Reagan acted "responsibly" and that "the time has come to return to free trade." At the same time, GM urged Japan to "end the non-tariff barriers that restrict access to Japanese markets."

As soon as the Reagan Administration decision was announced, Marvin Stucky, American Motors governmental affairs vice president, called the decision "unfortunate." He said the dollar/yen situation remains unchecked.

"The trade deficit will rise, and U.S. jobs will be exported to Japan," Stucky said. "It's just that simple."

Joseph E. Cappy, AMC group vice president—sales and marketing, will try to prevent that from happening.

"We're going to keep the fire going on what we've been doing," Cappy said. "We really don't know yet how many more Japanese cars will be coming, and we really don't know what the market saturation point is for Japanese cars in any one segment."

Cappy said once the saturation point is reached, dealers who sell Japanese makes will be forced to eliminate premium markups and "will have to do the same things the rest of us have been doing."

As a means of comparison, Cappy pointed to the light-truck market, where the VRA had no effect.

Ford Motor Co. Chairman Donald E. Petersen said his company was "disappointed" in the decision and said jobs would be created in Japan instead of in the U.S.

"Ending the Japanese export restrictions means that the rules have changed and we shall have to assess our options," Petersen said.

Ford and Lincoln-Mercury divisions declined to comment on what those options might be.

Volkswagen and Honda, which have built plants in the U.S., took no position on the propriety of the VRA decision, although spokesmen for both companies said they believed it would eventually mean more competition and likely price-cutting in the "low end" of the market.

Honda said its Accord sales would probably "increase gradually but not spurt." Roughly half of the Accord models sold in the U.S. are built at Honda's plant in Marysville, O..

Volkswagen said it has developed a number of "ways to approach" the expected increase in competition and the anticipated price-cutting, without necessarily slashing its own prices.

Reaction elsewhere was more predictable. Senator Donald M. Riegle, Michigan Democrat, called the decision a "serious mistake." He said ending VRA could add "$30 billion to the federal budget deficit and over $100 million to the trade deficit."

Rep. John D. Dingell, Michigan Democrat, said the Reagan Administration decision "shows ignorance of the unfairness of our current situation."

In January, Dingell and 31 cosponsors introduced a "Made in America" bill, which Dingell said was designed to prevent or remedy injury caused by auto imports to the nation's economy, the domestic industry and its suppliers.

The bill calls for the Secretary of Commerce to determine annually how many total cars were sold in the U.S. and to set a limit of not more than 15 percent for imports. The secretary would then make allocations among the import companies depending upon their respective shares during the prior year.

"Foreign" makers are those importing at least 100,000 new vehicles in the prior year. The bill includes civil penalties of up to $2,000 per vehicle for violation. The bill does not affect the U.S.-Canada auto products agreement. Import restrictions would end after 1990 if the injury to the U.S. is remedied.

Rep. Marcy Kaptur, Ohio Democrat, has introduced a bill to impose mandatory quotas on Japanese auto imports at current levels. She told her colleagues she took this action as a "direct result of President Reagan's misguided decision" to let the VRA expire.

She said fully one-third of the U.S. trade imbalance is with Japan, $19 billion of that in autos. Meanwhile, she said, American products are restricted from entering Japan.

Car production slips for week

By Louise Kertesz
Detroit Reporter

U.S. car makers scheduled assembly of 177,685 units last week, 2.36 percent less than the 181,986 completed the previous week and 2.32 percent below the year-ago week's 181,909.

Year-to-date, 1,657,119 cars have been assembled, a pace slightly ahead of (up 1.87 percent) last year's 1,626,765 units completed at this point.

February output of 673,423 cars was down 12.18 percent from January's 766,824 and was 3.13 percent below the 695,171 built in February, 1984.

Companies shared last week's scheduled production as follows: General Motors, 60.52 percent; Ford Motor Co., 19.69 percent; Chrysler Corp., 14.41 percent; American Honda, 2.17 percent; American Motors, 2.05 percent; Volkswagen of America, 1.13 percent, and New United Motor Mfg. Co., 0.03 percent.

AMC's Kenosha facility, which produces the Renault Alliance and Encore, is down this week (March 11) for one week for inventory adjustment.

GM scheduled two overtime shifts Saturday (March 9) at its plants in Fairfax, Kans.; Janesville, Wis.; Lakewood, Ga.; Leeds, Mo.; Linden, N.J.; Lordstown, O.; Oklahoma City; Orion Township, Mich., and Wilmington, Del.

One shift was scheduled Saturday at GM's plant in Wentzville, Mo.

Chrysler scheduled two nine-hour daily shifts this week at its plants in Belvidere, Ill.; Newark, Del., and St. Louis (No. 2).

Chrysler's Jefferson (Detroit) plant is scheduled to operate two 8½-hour daily shifts this week.

Ford scheduled daily overtime this week at its plants in Atlanta, Chicago, Lorain, O., Kansas City, Dearborn and Wixom, Mich.

Overtime is scheduled Saturday, March 16, at Ford's Dearborn plant.

Overseas auto subsidies detailed in ITC report

Continued from Page 8

duced the level of local content to 85 percent for passenger cars and 75 to 80 percent for trucks. Where components were sourced from member countries of the Latin American Integration Assn., local-content levels were reduced further.

The ITC said those arrangements were originally intended to last 10 years, but were renewed in 1982. The ITC said its latest statistics showed the Brazilian auto industry committed to $17 billion in exports in exchange for access to $4 billion of imported components and capital and subsidies.

The Taiwanese Government is now working to overcome several recent setbacks to its fledgling auto industry: The failure to consummate a cooperative venture with Toyota, which had been the centerpiece of the government's auto sector development policy, and the withdrawal of General Motors from a joint venture truck plant in 1982.

According to the ITC, the Taiwanese have responded to those developments by proposing to reduce tariffs and other barriers to imported cars and car parts to 30 percent (from 60 percent) over an 8-year period.

The trade commission reported that the Taiwanese hope this move will force domestic auto and auto parts makers to rationalize and combine production facilities, making it possible to increase export sales for replacement and OE parts from $200 million in 1983 to $2 billion by 1991.

The government is also encouraged by a recent Ford Motor Co. commitment to invest $40 million to double to output of its subsidiary, Ford Lio Ho Motor Co., and to export 30,000 cars by 1987. It is reported that Ford will recieve substantial tax and financial incentives for its investment.

The Taiwanese are also reported to be backing a cooperative venture between Japan's Hino truck company and Taiwanese firms, the ITC said.

There are presently six vehicle assembly companies in Taiwan, all producing under license from foreign manufacturers. Costs are said to be high however, and the domestic market is small with only 150,000 vehicles sold in 1983.

Although most of the ITC's data on auto export is based on 1982 shipments, it is interesting to note an ITC tabulation listing the hourly compensation cost index for auto production workers in the five countries during 1983.

Using 100 percent to represent U.S. labor cost, Canada's rate was given at 72 percent that of the U.S. compensation cost, Mexico's labor cost was listed at 14 percent of the U.S. rate, Brazil's wage was 12 percent, and Korea's wage was lised as 9 percent of U.S. wage cost.No figure was given for Taiwan.

Truck production holds steady; 69,504 assembled

Domestic makers targeted assembly of 69,504 trucks last week, a dip of 0.71 percent from the previous week's 69,999 but 7.92 percent more than the year-ago week's 64,404.

So far this year, 641,159 trucks have been built, 7.90 percent better than the 594,202 completed last year at this time.

Makers produced 280,318 trucks in February, 3.50 percent less than January's 290,492 but 7.29 percent more than the 261,265 built in February, 1984.

General Motors scheduled two overtime shifts Saturday (March 9) at its plants in Flint (Nos. 1 and 2), Janesville, Wis., and Lordstown, O.

One overtime shift was scheduled Saturday at GM's Baltimore plant.

Ford Motor Co. also scheduled Saturday overtime at its Twin Cities plant.

Daily overtime is scheduled this week (March 11) at Ford plants in Lorain, O.; Wayne, Mich. (Michigan Truck); Kansas City; Norfolk; Twin Cities, and Louisville.

Chrysler Corp. scheduled two nine-hour daily shifts at its plant in Warren, Mich., this week.

Output of cars in Canada dips 2.5 pct. for week

Canadian makers scheduled production of 20,207 cars last week, 2.51 percent fewer than the previous week's 20,727 and 13.55 percent below the year-ago week's 23,373.

So far this year, 191,876 cars have been assembled, 7.69 percent less than the 207,855 built last year at this point.

Makers produced 79,326 cars in February, 6.53 percent less than the 84,871 built in January and 12.69 percent less than the 90,853 completed in February, 1984.

American Motors' Brampton (Ont.) plant is closed for two weeks for inventory adjustment. Production is scheduled to resume March 18.

Truck makers expected to build 18,516 units last week, about the same (up 0.54 percent) as the previous week's 18,417, but 46.37 percent more than the year-ago week's 12,650.

Year-to-date, 173,102 trucks have been assembled, 9.33 percent more than the 158,133 completed last year at this point.

February's production total of 71,170 trucks was 9.39 percent less than January's 78,546 but 1.52 percent more than last February's 70,106.

Car supply drops back to 59½ days

By Arthur Flax
Automotive News Staff

The stockpile of domestic cars on March 1 reached a level not seen in almost four years, but a strong selling pace reduced the days' supply to 59½ from 65 a month earlier.

The actual number of new domestic cars in stock rose to 1,603,527, the highest count since Aug. 1, 1981, when 1,675,193 represented an 87½-day supply.

A month ago, the inventory totaled 1,565,456, and a year ago it was 1,537,290 units.

The ideal days' supply figure is generally considered to be 60, and although the entire industry was right in line with that count, there were shortages of certain models.

Notable was the drop in inventory among Chrysler's small cars on which factory incentives are currently offered. Days' supply of Horizon, Turismo, Omni and Charger models ranged from 28 to 34 days on March 1, down from a range of 80 to 88 a month earlier.

Supplies of Pontiac's Grand Am and 6000 models remained low, the Grand Am at 24½ days and the 6000 at 38, both a couple days lower than the month-earlier stock. Stocks of Oldsmobile's Cutlass Ciera and Supreme models as well as Chevrolet's Celebrity were also under 40 days.

Chevrolet Camaro supplies dropped from 70 days on Feb. 1, to 44 days on March 1. Ford Topaz dipped from 73 days to 54½ and Tempo fell from 81 days to 57½.

Inventories were split this way by maker: GM, 47.92 percent; Ford, 32.12 percent; Chrysler, 16.04 percent; AMC, 3.06 percent; VW, 0.83 percent, and Honda, 0.03 percent.

The March 1 split by market class: Subcompact, 18.89 percent; compact, 22.57 percent; intermediate, 30.87 percent; standard, 17.17 percent, and luxury, 10.50 percent.

The days' supplies of subcompacts on March 1: Domestic Accords, 1; Horizon, 28; Turismo, 29; Omni, 31; Charger, 34; Golf, 51½; Chevette, 55½; Pontiac 1000, 56½; Daytona, 69; Escort, 70; Laser, 75½; Fiero, 78; Lynx, 84; EXP, 106½; Alliance, 109½, and Encore, 127.

Compacts: Mustang, 43½; Camaro, 44; Cavalier, 53; Topaz, 54½; Skyhawk, 56; Tempo 57½; Sunbird, 64; Firebird, 69½; Aries, 70½; Reliant, 71; Cimarron, 76; Firenza, 82; LeBaron, 87; Capri, 96½, and Eagle, 120½.

Intermediates: Grand Am, 24½; Cutlass Ciera, 30; Century, 33; Celebrity, 36½ Cutlass Supreme, 37; Pontiac 6000, 38; Skylark, 43;

Anniversary Model

Peugeot by Pininfarina

To observe its 30-year association with Peugeot, Pininfarina presented this Griffe 4 coupe at the Geneva International Motor Show. The roof is transparent and front and rear bumpers have been replaced by impact zones that form an integral part of the bodywork. The Griffe 4 is 161 inches long with a wheelbase of 105.5 inches. Story and other pictures on Page 3.

Import-car deals climb to 12,427; Chevy is reason

By John K. Teahen Jr
Managing Editor

The number of dealers handling imported cars took off like a skyrocket last year, but the reader should not be misled by the unaudited numbers.

The annual Automotive News census found 12,427 dealerships in the U.S. handling imported cars on Jan. 1 of this year, compared with 10,096 at the beginning of 1984. That's an increase of 2,331 outlets or 23 percent.

But don't sound the trumpets. At least not too loudly.

Chevrolet accounted for just about all of the 2,331-outlet increase by introducing the Sprint last May and the Spectrum in the fall. Both are from Japan. At year's end, the Sprint (from Suzuki) was handled by 516 West Coast Chevy dealers, and the Spectrum (from Isuzu) was offered by 1,561 Chevy outlets in the East.

That takes care of 2,077 of the additional import outlets. Another 124 were added by Chrysler Corp. to sell the cars it imports from Mitsubishi.

So the independent imports added a total of 130 dealerships last year. Not a shabby performance by any means, but quite a bit different from the gain of 2,331 that goes into the record book.

Last year's upturn was the second in a row for the imports. They followed five years in which the total declined.

The Automotive News census divides import dealerships into two categories—those that handle only foreign cars and those that sell both imported and domestic lines. There's a further breakout in each of those groups.

In the import-only class, there are exclusives—stores that carry only one import line—and duals, which sell two more imported makes but have no domestic cars in the showroom.

Chrysler Liberty car project is gunning for GM's Saturn

By Edward Lapham
Marketing Editor

Chrysler Corp.'s five-year marketing strategy to supplant General Motors as the perceived "best" U.S. auto maker shifted to a higher gear last week, Automotive News has learned.

In a two-day, intensive presentation to Wall Street analysts, Chrysler bared its financial, product and marketing plans which leave little doubt that Chrysler has GM in its sights.

The main event in the confrontation is being billed as a lightweight championship bout between Chrysler's Liberty project and GM's highly publicized Saturn project.

Apparently, Chrysler felt compelled to tout its own wares in the wake of all the publicity GM's Saturn project has garnered before the company has even selected a plant site.

Chrysler Vice Chairman Gerald Greenwald fired the opening salvo when he told the analysts Chrysler intended to be the best, not necessarily the biggest, U.S. auto maker. He likened it to being Mercedes-Benz, not Volkswagen,in Germany and being Maserati or Ferrari, not Fiat, in Italy.

Chrysler Engineering Vice President Robert Sinclair gave the analysts a lot of detail on Liberty, which until recently was known as Concept 90 and thought to be in an early developmental stage.

According to Automotive News sources, Sinclair told the analysts a two-door, four-passenger hatchback Liberty prototype has scored EPA mileage results of 46 MPG on the city cycle and 70 MPG on the highway cycle at Chrysler's Chelsea (Mich.) test track.

Sinclair described the car as having a resin-injected body with

Chrysler mini-minivan left without a home

By Dan McCosh
Detroit Reporter

One of the biggest sourcing casualties of Chrysler Corp.'s recent decision to drop options on two U.S. manufacturing plant sites may have been a proposed radically new mini-minivan codenamed the "Z-van."

It reportedly is still a live project but apparently is temporarily orphaned.

Meanwhile, Chrysler reportedly has decided to begin converting one of its St. Louis plants next year to produce the 1987 J-car, a new luxury intermediate.

The two plant sites on which Chrysler had options were near Indianapolis, and Peoria, Ill. When the plant-site acquisition program was launched, apparently late last year, it represented a major change in Chrysler's philosophy to restrain production capacity in the U.S.

While product plans for the new plant sites weren't firm, the most likely scenario was to use a portion of the additional capacity to produce a radically new minivan that insiders are calling a "tall car." It is due in the 1988-89 time frame and is code-named the Z-van.

A short, high people-carrier, the Z-van is expected to incorporate some of the technology that will be used later in the Liberty (formerly Concept 90) project, now expected to follow a year or two later.

Chrysler's shift in sourcing announced last week means its Sterling Heights (Mich.) plant will be making "two yuppie cars—a big yuppie car and a little yuppie car," with St. Louis getting the upcoming J-body, Chrysler's midsize luxury entry, according to Chrysler insiders.

The Sterling Heights "big yuppie car" is the H-body Dodge Lancer and Chrysler LeBaron GTS, already in production, and the "little yuppie car" is the 1986½ P-car.

Although Chrysler Chairman Lee A. Iacocca cited the flood of competition coming from the Japanese, both from imports and U.S.-based plants, as the primary reason for killing plans to expand

AMC puts Espace minivan 'on hold'

DETROIT.—American Motors' plans to import the Espace, a minivan built for Renault by Matra, have been placed "on hold" while AMC negotiates a price with Matra, according to an AMC spokesman. The vehicle had been scheduled for U.S. introduction next year. In addition, AMC has said it will import a new compact line from Renault sometime before introduction of the intermediate, front-wheel-drive vehicle to be built at a new Brampton (Ont.) plant beginning in mid-1987.

Ishihara: 'Let makers decide on exports'

TOKYO.—Takashi Ishihara, chairman of the Japan Automobile Manufacturers Assn. and head of Nissan Motor Co., thinks Japanese car makers should use their own discretion in deciding on how many vehicles they should export to the U.S. in the wake of the end of voluntary import quotas on Japanese-made cars. Said Ishihara, "We shouldn't curb our exports

Air rules set for buses and heavy trucks

By Jake Kelderman
Washington Reporter

WASHINGTON.—It took a court order to do it, but the EPA has finally completed its job of setting emission standards for all vehicles.

The last to fall under the guidelines are heavy-duty truck and bus makers.

They received the word earlier this month when EPA set nitrogen oxide and diesel particulate standards for their products that will require them to commence controlling emissions with the 1988 model year. They must use catalyst and diesel particulate trap technology no later than 1994.

The agency's final rule set NOx standards of 1.2 grams per mile for trucks under 6,000 pounds GVW and 1.7 gpm for those between 6,000 and 8,500 pounds GVW, beginning the 1988 model year.

Heavy-duty engines would have to meet NOx standards of 6.0 grams per brake-horsepower-hour and diesel particulate emission standards of 0.6 grams per brake-horsepower-hour.

By 1991, those standards would drop to 5.0 g/BHP-hr NOx and 0.25 g/BHP-hr particulates for trucks and 5.0 g/BHP-hr NOx and 0.10 g/BHP-hr diesel particulates for buses.

By 1994, all heavy-duty diesel engines would have to meet a standard of 0.1 g/BHP-hr particulates.

This is the first time that EPA has required particulate emission control on heavy-duty diesel engines.

The agency expects the new requirements will boost the cost of a light-duty truck by $28 and heavy-duty gasoline-fueled vehicles by $21. Heavy-duty diesel engines, meanwhile, could see a cost increase of as much as $519, the agency estimated, because of the need to adopt trap oxidizer technology.

Because of the nature of the heavy-duty engine business, where product cycles are long, EPA has also given the makers the option of utilizing an averaging program whereby they can offset the greater emissions from some of their engines against those of some of their cleaner engines.

Available in the 1991 model year, the program is modeled after one currently in use in the light-duty diesel NOx and particulate control program. Like that program, it sets limits on the amount any engine may be above the base standard.

EPA, which was ordered by

Customized Opel

This four-seater KC 5 convertible, based on the Opel Monza, is built by Keinath, the Opel dealer in Dettingen, Germany. The KC 5, displayed at the Geneva International Motor Show, is available in Europe with a 2.2-liter injected four or a 2.5-liter injected six.

GM expected to top Ford sales in Europe

By Richard Feast
European Editor

GENEVA—All the signs point to it. This looks to be the year when General Motors passes Ford in the European new-car sales race.

Robert A. Lutz, chairman, proclaims Ford of Europe will not defend its 1984 market leadership this year.

"I'd rather be profitable on 10 percent than be losing money with market leadership and 13 percent," he said at the International Motor Show here.

But John Bagshaw, sales director at Adam Opel, which co-ordinates GM's European passenger-car sales, took a more aggressive attitude.

"I think we'll take a good shot at No. 2 this year," he predicted. No. 2 to whom Bagshaw would not say, but Lutz' comment suggests it will not be Ford.

Last year, GM finished fifth among the European Big Six, while Ford enjoyed market leadership—for the first time—by the narrowest of margins over Fiat Auto.

The rising Italian group is emerging as the favorite in this year's race, having led for much of last year. Its product lineup is modern. Even in Geneva it was launching an additional model—the Lancia Y10—which will further strengthen its hand. The Italian market, which it dominates, is large and steady.

In contrast, there is doubt and pessimism over sales prospects in the West German market. This has been caused by the acrimonious public debate over exhaust-emission standards which could wipe a half-milion units from the marketplace this year.

Nine months ago, in the aftermath of the Metalworkers' strike, German demand was running at an annualized rate of 2.5 million. Today, company executives talk about 2 million or less for 1985.

While this trend will equally affect the major German groups—Volkswagen, Audi, Opel and Ford—it will hold back their overall standings in Europe, just as the French decline last year worsened Renault's problems.

This year, the French market has stablized at a lower level, but Renault is still in serious trouble and at the Peugeot Group (PSA), the Peugeot brand name is the only one doing really well. Citroen is stable, but Talbot is almost dead.

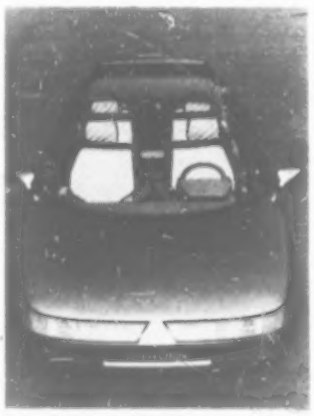
Thus, the combination of Fiat's and Italy's strength, and the weaknesses in other companies and countries, could give Fiat this year's title.

Last year, the Big Six were separated by only 1.9 percentage points in a market worth 10.17 million units. Ford was No. 1 with 12.8 percent, followed by Fiat, 12.7 percent; VW, 12.0 percent; PSA, 11.5 percent; General Motors, 11.1 percent, and Renault, 10.9 percent.

If GM does finish ahead of Ford, it will be the culmination of the major investment undertaking at the end of the 1970s. GM put a car-assembly plant into Spain and powertrain and transmission facilities into Austria to produce an additional model in its range of Opel-designed cars. The result turned GM from an also-ran sixth to a front runner in terms of sales.

The transformation has been particularly marked in the U.K., where within a few years Vauxhall has moved from around 9 percent to about 20 percent. It has been at the expense of Ford, the market leader, and Austin Rover.

Indeed, with German demand in the doldrums, what happens in the U.K. this year could provide the key to the Ford vs. GM needle match. For Ford, the country is the single most important national market. For GM, it is the second-most important, after West Germany. And it is sufficiently large (1.75 million last year) to affect the overal European picture.



Slippery Citroen

Citroen claims a drag co-efficient of 0.19 for its Eole, which it unveiled at Geneva. Posts and windows are flush, a glass dome covers the top of the car and the underbody is contoured. All wheels have fitted covers.

Volvo 280 coupe bows

New models, concepts in spotlight at Geneva

By Richard Feast
European Editor

GENEVA.—The absence of the Ford Scorpio sedan at the Geneva International Motor Show—it will be unveiled March 19—left the focus on just two newcomers.

While Lancia had already released photos and details of its baby Y10 model (Automotive News, Feb. 11), the ceremonial announcement of the luxury Volvo 280 coupe meant no outsider had seen the car until just after 3 p.m. on the press preview day.

The Volvo, designed and built by Italy's Bertone and aimed primarily at the U.S. market, was well received. Nuccio Bertone pronounced it "the best product we ever made." The car (Automotive News, March 11) will go into production in May.

But there were many other new developments at Geneva—smalll rays of sunshine amid the gloomy and endless talk of exhaust emissions and three-way catalysts that dominated the show.

Ford production four-wheeldrive and 16-valve versions of the Sierra sedan and a number of Japanese products made their European debuts. Among them were the Nissan Laurel, Subaru XT Turbo Coupe and all-wheel-drive versions of the Mitsubishi Tredia and space wagon.

On the Rolls-Royce stand, there was Volvo-style secrecy over the exhibit which remained firmly covered on the first press preview day. Only on the following day did the wraps come off to reveal a model of a Bentley which could be produced in the 1990s.

Known as Project 90, it is a deliberate throwback to the Bentley Continental R-Types of the 1950s. Rolls-Royce brought in stylists John Heffernan and Ken Greenley, the people responsible for the Panther Solo, to design it and had the full-scale model made at International Automotive Design, England.

Project 90 was designed around the mechanical components of the Mulsanne Turbo R, itself a show debutante. The R version has significant suspension changes to give the car sportier handling and better road holding.

There seems little doubt that the main inspiration for Project 90 came from the U.S., which last year took 52 percent (1,200 cars) of Rolls-Royce production. Bob Schwartz, the man in charge of U.S. sales, explained that the Bentley name is relatively unknown. He would like to take the Mulsanne Turbo but feels that a more distinctive vehicle is required for the American market. Hence Project 90, to test public reaction.

Project 90 could be made at Rolls-Royce's Mulliner Park ward body building facility in north London. But it would be very expensive. The regular Mulsanne Turbo costs almost $70,000 in its country of origin.

At Citroen, there was another concept vehicle. Known as the Eole (pronounced Ayol), it is constructed around the components of the big CX sedan.

Citroen claims that Eole is the first design study to be machined directly by computer from the stylist's drawings. The technique eliminated the need to produce a one-fifth scale model and reduced the period for finalizing the design to three weeks.

The emphasis is on aerodynamic efficiency. A drag coefficient of 0.19 is claimed.

The low drag comes in part from the use of glass placed on the outside of the vehicle structure, concealing windshield supports and pillars. A glass dome covers the upper part of the car and blends with the body.

The underside is completely contoured. External fittings are integrated with the body, and the windshield wiper is hidden. But perhaps most peculiar of all, all wheels have fitting covers. Those at the front are moved by hydraulic assistance when the wheels are turned.

Pininfarina celebrated 35 years of working with Peugeot by producing an upper-medium range coupe known as Griffe 4. There are no known production plans, but Pininfarina said the car represents "the seed of a new car generation."

Griffe 4 is a four seater, conservative yet modern in style. The roof is a transparent, smoked material and blends with the windows.

There is an absence of conventional bumpers. Instead, soft front and rear impact zones are integrated with the bodywork.

As always, the prize for the weirdest car at the Geneva auto show goes to local fantasist Franco Sbarro. This year's was named Challenger.

Challenger is an extreme, wedge-shaped and rounded two-seater. It has 4WD and is powered by either a Mercedes-Benz or Porsche V-8—each with twin turbos. Sbarro said he will produce 10 examples at prices from $62,000.

Bentley teaser

Bentley Project 90 was designed by Rolls-Royce as a deliberate throwback to the Bentley Continental R-types of 30 years ago (that's an R-type lurking in the background). The Project 90 on display at Geneva was a full-scale model, but it could go into production in the 1990s. The Project 90 was built to test public reaction, but Rolls-Royce obviously has the U.S. market in mind.

Chrysler, Ford, Honda show gains

Early-March sales decline 8 pct.

By Jenny L. King
Detroit Reporter

Early-March domestic new-car sales continued to dog their 1984 counterparts with the daily-rate keeping slightly ahead of 1984 and actual numbers for the period down. The year-to-date total was up just over one percent.

Buoyed by strong totals from Chrysler Corp., Ford Motor Co. and American Honda, sales numbered 193,625 for the March 1-10 period, down 8.34 percent from 211,240 a year earlier.

Sales were up 3.12 percent on a daily-rate basis, to 24,203 figured on eight days this year compared with 23,471 based on nine days in 1984.

Chrysler reported sales of 28,483 passenger cars, up 14.52 percent from 24,872 last year (up 28.80 percent daily rate). Ford was up 4.76 percent, to 53,435 from 51,006 (up 17.86 percent daily rate). Honda was up 72.67 percent, to 4,524 from 2,620, an increase of plus 94.50 percent daily rate.

General Motors sales were down more than 20,000 units, to 103,604 from 126,808, a decline of 18.30 percent (down 8.08 percent daily rate). American Motors was down 43.92 percent, to 2,650 from 4,725 (down 36.95 percent daily rate), and Volkswagen reported sales of 929 Golfs, down 23.16 percent from 1,209 (down 13.68 percent daily rate).

Chrysler and Ford made sizeable advances in market share over a year's time. Chrysler was up to 14.71 percent from 11.77 percent, and Ford climbed more than three percentage points, to 27.60 percent from 24.15 percent. Honda was up to 2.33 percent from 1.24 percent.

• GM plunged to 53.51 percent from 60.03 percent. AMC was down to 1.37 percent from 2.24 percent, and VW held just 0.48 percent, down from 0.57 percent.

Sales of individual make sales were mixed, with all GM makes down, all Chrysler makes up and good and bad news at Ford. Plymouth was up 17.17 percent, Chrysler was up 10.36 percent and Dodge was up 15.47 percent.

Ford was up 6.22 percent, Mercury was up 3.51 percent and Lincoln dropped 3.60 percent.

Buick was down 17.62 percent, Cadillac was down 24.43 percent, Chevrolet was down 20.44 percent, Oldsmobile was down 17.62 percent and Pontiac was down 13.31 percent. AMC was down an estimated 44.83 percent, Renault was down an estimated 43.75 percent, VW was down 23.16 percent and Honda was up 72.67 percent.

'86 Dodge Dakota pickup aims at new market niche

By Edward Lapham
Marketing Editor

Dodge plans to use its new 1986 N-body Dakota truck to create its own niche between imported pickups, current compact trucks and the full-sized models.

Marketing plans for the new compact Dakota, due to be built at Dodge City in Warren, Mich., include a comprehensive list of standard items to beat the imported makes at their own game and an optional eight-foot load bed to better Ford Ranger and Chevrolet S-10 optional long beds by six inches, Automotive News has learned. The extra half-foot is important to tradesmen who haul four-by-eight-foot sheets of material.

Just as the Chrysler T-vans created a niche in the market, Dakota could change the pickup market by offering a conventional bed on a smaller, fuel-efficient truck. One drawback to the plan could be the buying habits of tradesmen who often opt for the less-expensive, base models.

The list of Dakota standard equipment is lengthy, according to one source familiar with the program. Standard powertrain will be the 2.2-liter L-4 engine with 5-speed manual transmission. Optional engine will be the 3.9-liter V-6. Optional transmission will be a 3-speed automatic.

Dakota will have a standard 15-gallon fuel tank or optional 25-gallon tank. Standard rubber will be blackwall P 195/75 R14 steel-belted radial tires.

Also standard will be aluminum wheels, halogen headlamps, vinyl interior trim, vented windows, dual exterior mirrors, tinted glass, three-person bench seat and rack and pinion steering.

Ford intends to alter its compact truck marketing plans for 1986, too, in order to compete more directly with Chevrolet. Ford will offer a two-wheel-drive version of the Bronco II and an extended-cab version of the Ranger pickup.

Ranger also is slated to get its own version of automatic locking four-wheel drive. The Ranger system, like the Chevrolet S-10 system, will use locking axle half shafts rather than locking wheel hubs. The Ranger control panel will be mounted in an overhead console, according to one well-placed source.

The Chevrolet Insta-Trac automatic locking half shaft system has worked well, although the automatic locking hub system on C/K 4WD models reportedly will be dropped in favor of old-style, lockup hubs which must be engaged outside the vehicle.

More Saturn data requested by GM

DETROIT.—General Motors has asked several states to furnish additional information on their facilities for the Saturn plant.

GM has asked for additional data on utility rates, rail lines and coal and water resources.

Missouri is among the states asked to provide more data. The state recently became the fifth state to enact a mandatory seat-belt-use law.

as the U.S. is not asking us to do. Each car maker should make its exports in an orderly manner, leaving the matter to its judgment." Analysts expect Japanese exports to the U.S. to increase by 300,000 to 750,000 units in the next year.

Ad blitz to launch Laser XT

DETROIT.—Chrysler-Plymouth will use 30-second television spots, radio spots, print ads and billboards to launch its spring special Chrysler Laser XT sports package beginning April 1. The theme line is "Gotta be hotter." Four-color gatefolds will run in top enthusiast publications and high-demo newsweeklies. Radio spots and billboards will be used in 17 markets. The XT package, available on high-line Laser XE models, features special paint, handling items and a turbocharged engine and is available with optional new T-bar roof.

Million a year in Mexico?

MEXICO CITY.—Mexican auto producers should be assembling more than a million cars a year by 1989, according to Oscar B. Marx, president of Ford of Mexico. Marx said he expects a 17-percent growth rate for Ford in Mexico this year, thanks in part to its expansion of its plant in Hermosillo.

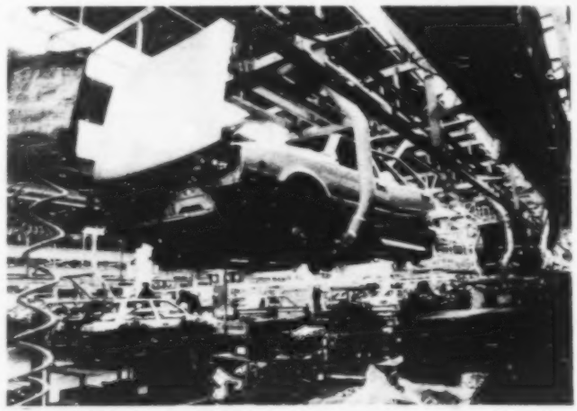
Korean autos head to Australia for first time

SEOUL, Korea.—It appears that Korean-made automobiles will be exported to Australia this year for the first time.

The Australian Government recently set a quota for 1985 imports of Korean cars that will allow Bond Co., of Australia, to import Korean-made vehicles.

Bond, which recently signed a contract with Korea's Hyundai Motor Co., is expected to import Hyundai's compact passenger cars, the Pony and the Stellar.

Australia has imported 200,000 automobiles annually. Korea previously could not export automobiles to Australia because that nation had no quota for Korean cars.



The mating process

As Excel body moves by cradle down the assembly line at Hyundai, hydraulic jacks are used to lift engine and transaxle for mating to the body overhead.

Hyundai's goal for 1990s: One of world auto leaders

EDITOR'S NOTE: *This is the last of a series of articles on the Korean auto industry.*

By John Hartley
Staff Correspondent

ULSAN, Korea.—"We aim to be one of the world's leading auto manufacturers in the 1990s," is the boast Hyundai, Korea's largest auto manufacturer, is now making.

With a new, front-wheel-drive subcompact and a new factory which together are claimed to have cost well over $400 million, it is all set to go.

Designed to supersede the Pony, the new subompact is based on Mitsubishi's 1.3/1.5-liter single-overhead-cam engine, transaxle and suspension, decked out with a five-door hatchback body. Clearly an up-to-date design, it is code-named X-car but called the Excel in Korea.

This is the car with which Hyundai plans to invade the U.S. market this fall.

The auto appears to be a competent design, with reasonable interior space and a six-window construction with very slim rear pillars formed by the deep rear door. There are exceptionally deep side windows, a sloping hood and a typically bland frontal appearance.

Still, what really sets the "new Hyundai" apart from the old is the new factory. Not only does it drag the Koreans into the modern world, it gives them so much extra capacity that the company will be anxious to push exports up in a dramatic manner.

Hyundai's plant was initially set up under the management of George Turnbull, the British auto leader who had left BL in the mid-1970s.

Capacity until the recent changes was around 150,000 units a year, according to statistics released by the Korea Auto Industries Cooperative Assn. Passenger cars accounted for some 121,000 units—91,000 Ponys and 30,000 Stellars.

Now, Hyundaid has a new welding shop with 11 robots and an additional final aassembly line. To keep costs down, Hyundai has extended the main shops to accommodate the new lines. Now there are two welding and two final assembly lines.

One high-speed line, which has a capacity of 200,000 units per year, is used to build the Pony and the Pony Excel.The slower line, on which there are a couple of welding robots supplied by Fanuc, is used to build the larger Stellar sedan. It has a capacity of 100,000 units per year.

It is well known that the new plant and car were designed with the technical assistance of Mitsubishi Motors of Japan which, with Mitsubishi Corp., holds a 10-percent stake in Hyundai.

How far did this help go?

Hwang Ho Park, Hyundai manager of production engineering, said, "The engine came from Mitsubishi and so did some of the ideas on welding. But the layout, process planning and design of the welding equipment are our own."

The welding layout does not just ape practice elsewhere, although, of course, the basic prin-

Ready for the world

This five-door hatchback Hyundai Pony Excel has reached the end of the assembly line and is heading for the export market.

Van-Truk III introduced

Van-Truk, Inc., Fort Myers, Fla., has introduced Van-Truk III, a multiple-passenger van conversion with a full-length pickup-truck bed to haul a fifth-wheel travel trailer, a gooseneck horse trailer and other types of recreational equipment.

truck industry news

Compact-truck sales soar for February, 2 months

By Arthur Flax
Assistant Truck Editor

Compact truck sales, spurred by factory incentive programs, scored tremendous sales increases during February and led to new records among Big Three dealers.

Ford and Chrysler reported record sales for the first two months of any year and GMC set a record for February. Chevrolet was close to a record pace.

February sales of all trucks sold in the U.S. peaked at an estimated 372,174 units, up 17.2 percent from the record of 317,438 February sales set a year ago, according to import manufacturer's reports and preliminary MVMA figures for U.S.-based manufacturers.

The two-month total was an estimated 734,537, also a record, up 25.4 percent from the year-ago 585,572 sales. The previous record of 600,953 sales through the first two months of a year was set in 1979.

Light-truck sales in February totaled (estimated) 352,867, up 18 percent from 298,919 (exact sales) a year-ago; medium-duty truck sales totaled 3,866 units, down 9.9 percent from 4,293, and heavy-truck sales totaled 15,441, up 8.5 percent from 14,226.

In the first two months of 1985, (estimated) light truck sales totaled 692,483 units, up 25.6 percent from 551,218 (exact sales) a year ago; medium-duty truck sales totaled 8,604 units, up 7.3 percent from 8,022 and heavy-truck sales totaled 33,449, up 27 percent from 26,332.

Big Three truck dealers retailed

Ford and Iveco offer incentives to boost sales

Ford Truck Operations is offering special discounts on its 9000-Series models, while IVECO Trucks of North America is using cash rebates to promote sales of its medium-duty diesels.

Ford is running a major marketing program from Feb. 11 to May 10 to promote the sale or lease of Ford CLT-9000 Series trucks.

The program offers potential customers special discounts averaging about $5,000 on CLT-9000 models. They are roughly similar to what fleet customers would receive, except that they are available to all customers.

Ford also offers "red carpet"

Meanwhile, they're converting Astro-Safari cargo units

GM dealers want passenger vans

By Joseph Bohn
Truck Editor

General Motors' M-vans, often predicted to have their greatest appeal with commercial buyers, are really turning out to be most popular as people carriers and conversion units, according to Chevrolet and GMC dealers.

Faced with a temporary lack of passenger models, Chevrolet and GMC dealers have been successfully satisfying some of the demand by converting their Astro and Safari cargo units into passenger models on their own.

GM, as part of its quality-control effort, elected to build and ship the easier-to-produce cargo versions first.

The tight quality-control program has resulted in a number of constraints during the early launch months.

For example, passenger models aren't available in the base 2.5-liter engine or manual transmission configuration, a Chevrolet spokesman confirmed. For at least the next several months, passenger Astros will be available only with V-6 engines and 4-speed automatics. Both are options, and together they add $995 to the retail price of the vehicles.

But Chevrolet has solved all of its early supply problems and now is ready to roll full-tilt. Michael Erdman, Chevrolet marketing manager—trucks, said the division is now beginning to really crank out the passenger versions and expects to have 8,000 to 10,000 in the field by early to mid-April.

A full-scale promotional campaign will follow. Erdman said he didn't feel comfortable doing a full-court promotional press until there were at least 12,000 to 14,000 passenger-type Astros in dealers' hands.

Chevrolet still isn't sure what the mix of commercial to passenger model sales will be and is staying flexibile for the time being. But Erdman said it has the capability to build 65-70 percent of its Astros as people-carriers, if that's how demand shapes up.

Chevrolet has begun promoting Astro on a limited basis and plans to hammer home the "one van that stands alone against competitors" theme, Erdman said. That is predicated on a number of features like its eight-passenger carrying capacity, 4.3-liter V-6 engine and 5,000-pound towing capacity which competitive Chrysler and Toyota vans don't have.

Chevrolet will also use families and garageability settings, Erdman said, to drum home the fact that its van is a very viable choice for station-wagon and passenger-car owners who make up the strongest segment of the compact van market.

Competitors, he noted, "would love" to have people regard the Astro as basically a commercial vehicle, but Chevrolet isn't going to let that happen.

Meanwhile, dealers affirmed the strong interest in the passenger version.

Mark Eddins, of Friendly Chevrolet, Dallas, one of the largest Chevrolet stores in the country, said initial Astro sales were "relatively small because of the non-existence of the passenger van. However, we increased our sales by going to an outside vendor and installing the passenger package. That has really helped, and now we're selling them fairly consistently."

By early March, he had sold 10 Astros out of 40-50 received, after deciding to go the conversion route. Initially, as cargo models, they had just sat on his lot without much action.

His RV business with conversion companies is also picking up, he added, as "people see more and more of these vans."

But, surprisingly, Eddins doesn't feel the Astro will be a big commercial market seller, simply because the conventional Chevy van has too many advantages and is too well established among commercial buyers.

"The commercial market is non-existent for this size van," Eddins said. "If you just take the basics (dimensions), you're not looking at that much difference between the Astro and the regular van. And you're looking at more carrying capacity in the G-van.

"For the utility market, it's a duplicate entry, and there aren't enough significant differences to make someone buy it over a G-van which has a proven track record in that market," Eddins concluded.

His dealership retails 2,000 to 2,400 vans a year in all the different van sales segments.

Dick Gillilan, truck sales manager for Jack Wall Chevrolet, Pas-

Mitsubishi plans medium duties for U.S. market

Mitsubishi Motor Corp. has announced plans to sell its Fuso FK/FN Class 6 and 7 diesel trucks in the U.S. this fall through a new marketing arm and dealer network.

To be based in the Eastern U.S., the new truck operation expects to sell 3,000 to 5,000 units per year and will operate separately from the car and light-truck channels of Chrysler Corp. and Mitsubishi Motor Sales of America.

Mitsubishi plans to start marketing the trucks in the Northeast and gradually expand to the Gulf states.

A Mitsubishi spokesman said the company is looking for established commercial truck dealers to sell its vehicles. According to sources, several dealer organizations have already been contacted.

The company said it will first display its trucks at the New England Truck Show, April 24-26, in Boston. Twelve test units are currently operating in the U.S., according to the firm.

Mitsubishi joins Isuzu Trucks of America, Inc., and Hino Motors (U.S.A.), Inc., as the third Japanese maker to enter the U.S. medium-truck market. A fourth Japanese company, Nissan Diesel America, Inc., has set up headquarters in Irving, Tex., but has yet to introduce a commercial truck in the U.S.

Sales of medium and heavy-duty trucks totaled 276,368 units in the U.S. in 1984 with U.S. makers controlling virtually all of it. The market is very price competitive and is expected to stay that way for some time to come.

A General Motors spokesman

Cummins cuts production of NT heavy-duty diesel

COLUMBUS, Ind.—Cummins Engine Co. cut production of its NT heavy-duty diesel engine by about 15 percent at the end of February.

The cutback, Cummins said, was caused by an anticipated leveling of demand in the North American heavy-truck market and lower engine production required for some of the company's defense projects.

Total Cummins sales will not be significantly affected because of higher sales of L10 heavy-duty and B series medium-duty engines, the company said.

Truck buyers, a spokesperson noted, are beginning to shift their purchases from the 14-liter NT engine to the more fuel-efficient 10-liter L10, which overlaps some of the NT range in power output.

Some employes will be laid off because of the NT cutback, but the company said it had not made a final decision on the number.

He still has the touch

Ken Self, right, former head of Freightliner Corp., spent three years building a two-thirds scale replica of a 1958 Freightliner full-tilt cab-over-engine truck. The 1979 retiree spent nearly 40 years in the business, and "had to have something to do," he said. He proudly displays his model to Gorden Clark, Freightliner senior vice president of sales and marketing, as they compare it with the latest Freightliner COE.

Spoilers and skirts for Mercedes 190

Kamei USA, North Haven, Conn., has introduced the X1 Mercedes-Benz 190 system which consists of a front spoiler, side skirts, a rear skirt and rear spoiler.

Ford and Iveco offering incentives to boost sales

Continued from Page 16

36-month lease terms through Ford Motor Credit on "work-ready" trucks, with monthly lease payments of $1,663.36.

Kenneth F. Smith, Ford heavy-truck general sales and marketing manager, said the program is aimed at the premium diesel truck market, with particular emphasis on high-tilt CL and CLT-9000 models.

Ford is running salesmen and sales manager spiffs as part of the program. Salesmen can win merchandise, and sales managers get a shopping spree at Neiman-Marcus.

IVECO is offering $2,000 cash rebates to buyers of its diesel trucks sold by participating IVECO dealers. The rebate applies on new and unused 1984-85 models bought from March 1 to April 30.

James R. Bostic, IVECO president, said the program is called "Share IVECO's Success" because the company has over 12,000 of its Z-Range trucks on American roads.

Meanwhile, they're converting Astro-Safari cargo units

GM dealers want passenger vans

Continued from Page 16

adena, Calif., said the Astro was still moving slowly in early March, but "it'll be just a matter of time before it takes off."

Like Friendly Chevrolet, his dealership is doing conversions on the Astro, and "you'll find an awful lot of those will be people movers," Gillilan predicted.

"We originally thought it would have a lot of appeal to the commercial market, but it's not enough van for the electrician, carpenter or plumber who are the people that have been buying our cargo vans," Gillilan said.

By contrast, there are a great many rental companies in his area which run shuttle services for out-of-towners and, for them, the economy, easy of driving and roominess of the Astro is very appealing, Gillilan added.

He, too, pointed out the popularity of the G-van with conversion companies which have been installing TV sets, consoles, hide-a-beds and the like to make them into popular RV units.

The dealership, which sells 70 to 110 trucks a month, is one of the largest Chevrolet outlets in Southern California.

Capitol Mack-GMC, Baton Rouge, also found a lot of excitement in the new vans but not in the cargo version.

"People are waiting for the passenger model. I've taken the cargo version and had it customized and put in nice trim and captain's chairs and a sofa or couch. The reaction from people is they like what they see," said Santo Bentivegna, light-duty sales manager for Capitol Mack-GMC.

Bentivegna said he sold a couple of cargo units to commercial users, but is mainly concentrating on passenger conversions to fill the gap until factory versions arrive.

"I could get a lot of orders for passenger Astros. We're taking orders and submitting them, but we can't promise delivery" and that has turned some buyers off, he added.

He put in 20 passenger-model orders, two of which have deposits from customers who are willing to wait. He figures there were at least 10 other people who would have placed firm orders, if he had been able to give them a delivery or production date.

He said that, even without heavy national ad support, the vans are drawing a lot of interest, judging by the number of brochures which dealership visitors have taken off his racks. He's had to replenish his supply of Astro informational literature twice.

Elsewhere, dealerships like Arroway Chevrolet, Katonah, N.Y., and Town Chevrolet, Middletown, N.J., also reported that customers are essentially waiting for the passenger versions.

"The cargo model has limited appeal," said Larry Tynan Jr., general manager, Town Chevrolet. "If we had more of these passenger vans and better variety, we'd be able to sell a lot more of them."

Added Armand Bassi, owner of Arroway Chevrolet, "People are waiting for the passenger versions. I think you'll see a fair number of Astros sold as cargo vans, but their real success will be as people movers."

New Chevy dealer

BLACKFOOT, Id.—Darrell Nichols has signed a Chevrolet sales and service agreement for Riverside Sales.

Parts group to explore changes in aftermarket

Continued from Page 20

Synnott, chairman, Worldparts Corp., will explain how a company can get into the import business. Experienced importers also will tell why it became a necessity and how they got involved.

At another session on importing, John Dyer, University of Miami Marketing Department, and a panel of aftermarket exporters will demonstrate how a company can profit through exports.

Arnold Slight, Fram Division technical sales manager, and William Wade Jr., corporate development vice president, CR Industries, will be leaders of a workshop on "Catalogs, the Necessary Evil."

At the opening seminar May 17, Heartsill Wilson, management consultant, will discuss theories prescribed to by successful American companies and how a firm can put them into practice.

There will be five concurrent workshops after the seminar. Speakers and their topics will be:

S. E. Sanderson, president, Geneva Corp. mergers and acquisitions; Richard Teasel, consultant, Champion Spark Plug Co.; Stan Stephenson, Motor Age editor, and C. Dick Perkins, staff administrator, General Motors Service Research, technical revolution; Jane Symons, general manager, Wetacom, and Richard D. Kudner, advertising/merchandising vice president, Champion Spark Plug, teleconferencing.

Also, Robert Williams, Arthur Young & Co., office automation; Ollie Furnish, senior vice president, Guarantee Auto Stores, Inc.; Jim Maynard, automotive service training and technical director, Montgomery Ward & Co.; Bruce Allen, automotive service group manager, Canadian Tire Co., and David Reale, marketing vice president, FMC Corp., accelerating sales through service.

Communication in the Aftermarket will be the topic of a post-luncheon seminar, featuring Julian C. Morris, APAA president, and Lilot S. Moorman, principal, Lilot S. Moorman Associates.

Sharlene Weiss, president, Healthy People, will speak on managing stress at a session following the seminar.

Calif. seminar will focus on service systems

Continued from Page 20

winners, the money is divided and a minimum of $100 is awarded to the high scorers.

Arrow conducts the seminars twice a year, usually within a week or two of the registration deadline for the certification tests. The clinics are held in different locations around the country and, Rosenstein said, attracts mechanics of every stripe, ranging from helpers and independent shop workers to car-dealership, service-station and fleet-service personnel.

The April 3 clinic will be held at the Anaheim Marroitt beginning at 7 p.m. Rosenstein said advance registration is recommended and can be obtained from Arrow Automotive in Framingham, Mass., or through Arrow's warehouse distributors in Southern California.

They include Apollo Warehouse in Carson, Desert Automotive Warehouse in Cathedral City, Davidson Conroy in Los Angeles, or D.C. Automotive Warehouse in Highland Park. Registration forms are also available from Southern California AAA, jobbers and dealers handling the Arrow product line and the Automotive Service Council.

Incentives spur February gains

Compacts lead sales explosion

Continued from Page 16

285,390 units in February, up 18.2 percent over the 241,469 units sold a year earlier. For the first two months of 1985, the dealers sold 554,731 units, up 21 percent from the year ago total of 458,483.

Ford's 203,627 sales through February this year were 9.3 percent ahead of the 186,284 units sold through February, 1978, the previous record, and 21.5 percent more than the 167,642 units sold through February, 1984.

Ford sold 106,740 trucks in February, 18.9 percent more than the 89,765 units sold a year earlier and just short of the February record of 106,993 sales, set in 1978.

February sales of Ranger compact pickups, for which Ford has offered 8.8 percent financing since Feb. 5, totaled 31,129 units, 67.5 percent ahead of January's 18,579 sales and double last February's count of 15,493.

Edson P. Williams, general manager, Ford Truck Operations, viewed the light-duty market as "going absolutely mad."

Total industry sales during February, he said, point to a record and match any rate seen in the 1978-1979 boom years.

Chrysler sales, apparently boosted by incentives and strong selling minivans, soared to records for the month and year.

February sales of 51,902 trucks were 14.1 percent ahead of the previous record 45,499 units set in 1977 and 24.8 percent over the year-earler 41,572 sales.

Chrysler's 99,015 sales for the year through February were also a record, 17.6 percent ahead of the 84,172 units retailed through February, 1977, and 34.8 percent over the year-earlier 73,460 sales.

Chrysler offered 8.8 percent financing on its Mitsubishi-built Ram 50 pickups for two months through March 10 and is offering $300 to $500 rebates on pickups and Ramchargers through May.

Comparing sales of those vehicles through February, 1985, with year-earlier figures showed Ram 50 sales up 96.3 percent, pickups up 29.9 percent and Ramchargers up 54.3 percent. Minivan sales were up 33.9 percent.

GMC retailed a record 26,859 units in February, 2.7 percent higher than the 26,147 sales reported in the previous record February of 1979 and 8.5 percent greater than the year-earlier 24,754 sales.

Sales for the year through February totaled 52,845 units, up 3 percent over the previous record 51,320 units retailed a year-earlier.

Sales of S-15 pickups were up 67.2 percent for the month and 34.3 percent for the year. GMC began a two-month 8.8 percent financing program on those vehicles on Feb. 1.

However, sales of heavy-trucks were off 50.1 percent in February and 47.8 percent for the year, compared with year-earlier figures.

A GMC spokesman said of the heavy market, "We are optimistic for the industry and for GMC. We think 1985 will be a stronger year than 1984 . . . There is a lot of interest from the fleets, but some hesitancy to buy."

Fleets, the spokesman noted, are concerned with the government deficit and the stability of the economy.

Chevrolet retailed 99,889 units in February, 17 percent over the 85,378 units sold a year earlier. This year, Chevrolet has sold 199,244 trucks, 20 percent more than the 166,061 sold in the first two months of 1984.

In 1979, Chevrolet sold a February record of 103,014 units and a two-month record of 201,625 units.

Chevrolet is also offering 8.8 percent GMAC financing on S-10 pickups and sold an alltime monthly record 25,157 in February, surpassing the old record of 25,046 sales set in March, 1982.

February sales of Jeep four-wheel-drive vehicles were up 9.4 percent to 12,622 units, compared with 11,536 in the same month a year ago. Sales of the downsized Cherokee represented 56 percent of the total.

The two-month count of 25,804 sales was up 15.1 percent over the year-ago 22,405 units retailed.

Japanese manufacturers retailed 70,232 units, including the 6,906 Chrysler Ram 50s, during February, compared with 57,534 a year earlier.

Toyota sold 24,432 units, up 36.7 percent from the year-ago 17,870 sales; Nissan sold 21,932, down 5.5 percent from 23,313; Mazda sold 8,726, down 11.8 percent from 9,890; Isuzu sold 6,755, up 262.6 percent from 1,863, and Mitsubishi sold 1,481 under its own nameplate, up 27.8 percent from 1,159.

Of Nissan's February, 1985, sales, 10,942 were U.S.-built, down 3.2 percent from 11,303 a yearearlier.

For the first two months of this year, Japanese makers sold 142,759 units, including the 13,038 Ram 50s, compared with 101,391 a year-earlier.

Nissan sold 52,531 units, up 45.1 percent from the year-ago 36,202 sales; Toyota sold 48,341 units, up 41.7 percent from 34,105; Mazda sold 15,850, down 14 percent from 18,439; Isuzu sold 9,787, up 175.4 percent from 3,554, and Mitsubishi sold 3,212 units under its own nameplate, up 31.2 percent from 2,449.

Diesel-car sales rise 84 percent in Britain

LONDON.—Sales of diesel-engine cars in Great Britain totaled 45,386 in 1984, an increase of 84.4 percent over 24,602 in 1983, according to the Society of Motor Manufacturers and Traders.

Ford topped the diesel-car market last year with sales of 17,614 units. PSA was second with 11,357, and General Motors was third with 6,217.

Downey Toyota grants volunteer $500 scholarship

DOWNEY, Calif.—Candida Gallegos received a $500 scholarship from Downey Toyota here for her more than 340 hours of voluntary service to Downey Community Hospital.

Gallegos, a member of the Candy Stripers Board for two years, plans to study nursing and pediatrics in college.

She also received a 14-karat gold necklace and a commemorative plaque.

Participating in the ceremony were Greg Burke, business manager of Downey Toyota, and Bill Hunter, marketing director of G. Terzis Candy Co., which helped organize the event.

B-W names Gardner

TROY, Mich.—Lee M. Gardner has been appointed operations vice president for the Borg & Beck unit of Borg-Warner Automotive, Sterling Heights, Mich. He formerly was business development director for Borg-Warner Industrial Products, Los Angeles.

One more profit opportunity from Wheelways.

VOLKSWAGEN + WHEELWAYS

SPRING PROFITS

Wheelways Financial Services and Volkswagen of America are pleased to announce a special spring time profit opportunity.

We are now making available to the industry, a fleet of one year old Volkswagen Rabbits. These vehicles may be purchased outright or Wheelways can provide a rent-a-car package to include Financing, Primary Automobile Liability, Comprehensive Collision, plus Conversion Coverage.

When you select 5 or more Volkswagens, you can also select from the following:

- Interest free floor planning for 60 days.
- Power train Warranty available.
- Interest free rent-a-car financing for 90 days.
- Immediate Delivery.
- Profit opportunity-average unit value is $5,700

There are a limited number of vehicles available, so we must handle each request on a first come, first serve basis. Call or write today for more information.

Please tell me more about Wheelways springtime profit opportunity.

Will also study diesel venture

DDA and Deere sign marketing agreement

By Joseph Bohn
Truck Editor

Detroit Diesel Allison Division of General Motors and Deere & Co. have signed a letter of intent under which they will study the feasibility of forming a joint venture in the diesel engine business.

The two companies also are striking a marketing/distribution agreement which, more immediately, will allow each to distribute and sell selected diesel engine products made by the other.

Deere is particularly interested in a new, high-tech Series 60 engine line which DDA is developing.

The new engine line will be "larger than their average engine," a Deere spokesman added and "larger than the average engine we make. Of course, We'll be looking at a lot more than that."

The engine products they select will augment product lines of both companies.

"We have a mutual marketing agreement so they have an opportunity to look at ours (engines) and we have an opportunity to look at theirs. It should be synergistic to both organizations," a DDA spokesman said.

DDA builds a 6.2-liter diesel in Moraine, O., for Chevrolet and GMC pickup trucks, Suburbans and four-wheel-drive vehicles. It builds an 8.2-liter diesel for medium-duty trucks in Romulus, Mich., and heavy-duty engines in Redford, Mich., in the 53, 71, 92 and 149 series. The latter are large, heavy-duty two-cycle engines for a variety of industrial, off-highway/on-highway, marine and other markets.

A spokesman said the new arrangement would be geared more toward allowing DDA to better serve *existing markets than pursuing* new ones.

DDA sells directly to large OE customers, like International Harvester, Ford and PACCAR, and indirectly to smaller-volume customers through 46 North American and 125 overseas distributors. Its distributor organization, a spokesman added, is primarily geared toward providing parts and service on its products.

A Deere spokesman said that, although it builds a full range of engines from 50 HP up to 400 HP, most of its volume is in the smaller, heavy-duty 240-HP and under range.

"Their average engine is larger than the average engine we produce," he said.

Most of Deere's engines go into its own products. Only a small percentage is sold to OEM customers.

Deere has only about 50 dealers in North America.

"If we use their (DDA's) distribution system, we automatically have more dealer outlets," the Deere spokesman concluded.

Belt-use programs win DOT awards for four cities

WASHINGTON.—Secretary of Transportation Elizabeth H. Dole honored the mayors of four winning cities that participated in a contest designed to increase the use of safety belts in communities across the country.

Dole presented trophies to Mayors John Mercer, of Sunnyvale, Calif., and Dale Danks Jr., of Jackson, Miss., and to New York City Commissioner of Transportation Anthony Ameruso, representing Mayor Edward I. Koch, and Gail Beagle, administrative assistant to Rep. Henry B. Gonzalez, representing Mayor Henry Cisneros, of San Antonio.

The contest was initiated last spring by Mayor Louis Montano, of Santa Fe, and became known as the Santa Fe Challenge. Cities with populations exceeding 15,000 that were conducting safety-belt-use programs were invited to enter the competition in an effort to increase belt use.

Dole also honored Mayor Montano and Mayor Ernest Morial, of New Orleans, president of the U.S. Conference of Mayors, which endorsed the competition and promoted participation through its membership.

In all, 25 cities registered to participate in the safety-belt contest and 13 submitted results.

At April 25 meeting

CARB to debate plan for warning device

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.— A proposal requiring a diagnostic and malfunction warning system on vehicles equipped with three-way catalysts will be considered by the California Air Resources Board (CARB) when it meets here April 25.

If passed, the rule would require that all 1988 and subsequent vehicles be equipped with a means of informing vehicle owners of malfunctions that would increase emissions to a specified degree and an on-board system that would identify the likely area responsible for the malfunction.

As part of the measure, CARB will also consider increasing the service maintenance requirements of oxygen sensors from 30,000 to 50,000 miles because of the the diagnostic and warning rule.

Currently, vehicles are equipped with an oxygen sensor light that automatically trips at 30,000 miles to remind the owner to have that part of the emission control system serviced.

According to the proposal, "manufacturers unable to equip their vehicles with 50,000-mile oxygen sensors would be required to provide free replacement of the sensor at the first maintenance interval, thereby extending their responsibility to 50,000 miles."

Other matters that will be taken up at the April 25 meeting include a proposal to reduce warranty requirements on fuel-injection pumps for diesel engines from 100,000 to 50,000 miles and a hearing on lowering sulphur content of gasoline and diesel fuel.

The petition to lower the warranty requirements on diesel fuel-injection pumps has been submitted by International Harvester. According to the board, IH has testified that it may have to replace a large number of pumps due to vehicle modifications resulting in excessive engine loadings.

The board's proposal would redefine the useful life of the pump as 5 years/50,000 miles or 3,000 hours of operation. This amendment would apply only to the 1985 and 1986 model years.

FTC has opening as Douglas quits

WASHINGTON.—Federal Trade Commissioner George W. Douglas has resigned, effective mid-September. This will leave a vacancy for a seven-year term for a Democrat or Independent.

Douglas, a Democrat, has consistently voted with FTC Chairman James C. Miller III in the Reagan philosophy of getting FTC rules off the backs of companies and having FTC make economic input to other government agency decisions.

Meanwhile, FTC Commissioner-designate Mary Ascuenaga, an Independent, has made her first appearance before the Senate Commerce Committee but she has not yet been confirmed. And rumors persist that Chairman Miller may be leaving for some as yet undefined greener pastures.

Only Quebec gets Suzuki's Forsa

MONTREAL.—Suzuki Canada, Inc., has introduced the Forsa, a front-wheel-drive, 5-speed, two-door auto, which is available only in Quebec and priced at $6,195 (Canadian) for the base model and $6,695 for the deluxe.

Similar models, made by Suzuki and distributed by General Motors, are sold on the U.S. West Coast as the Sprint and in British Columbia as the Firefly.

Factory, dealers, suppliers

Computers link Chrysler operations

Continued from Page 6

the computer.

"As a result, we are launching 100 dealers a week," Quint said. "There is no way we could do that if we had to go out and physically train everyone in the dealership to use that system."

Zone offices will be hooked into the system.

District managers will also be part of the integration and will have the same inquiry and communication capacity as the dealers plus a little more. They will be able to check the dealers' status and financial condition. Those managers may even be carrying a portable computer.

The Chrysler plants will also be linked to the main systems as each is modernized, probably within two years, Quint said.

The Sterling Heights and Windsor assembly plants already are run on a state-of-the-art central computer in the plant which is linked to the corporate network and the suppliers. Other plants are linked in a less-sophisticated manner.

The interiors of those two plants were designed by computer simulation.

Chrysler's computer-aided design and computer-aided manufacturing systems are also integrated on three systems—a Control Data Cyber system at Highland Park Design, a General Electric Calma at Outer Drive (Detroit) Tool and Die and an IBM system at Highland Park. The IBM is used for management information, plant scheduling, dealer communcations and the like.

The Control Data CAD system at Highland Park Design and the GE Calma CAM system at Outer Drive Tool and Die already talk to one another, according to Jack E. Thompson, manager, technical system development.

Chrysler is linking the IBM system to the other two, he said.

The Outer Drive operation is a small plant laboratory for new ideas with conveyors and robots where new products can be tested under assembly condititions.

About 25 percent of the new model can be created at Outer Drive, Thompson said. The rest is done outside because it is more cost-effective.

"Our robot lab is really a pilot assembly line which simulated production conditions," Thompson said. "Go to Ford or GM and ask them to show you their robot lab. You'll see a room full of robots. It is not a product environment like we have."

Since the CAD/CAM systems are linked between Outer Drive and corporate design many things are possible.

The tools and dies for the 1986 P-car where made directly from computer data with no wood masters. Two-thirds of the LeBaron GTS was designed by CAD/CAM, Robert Sinclair, vice president engineering, told the analysts meeting.

All electronic systems for new Chrysler vehicles are done on the computer, he said.

Sinclair also told the analysts that Chrysler spends only eight-tenths of one percent of its sales dollar for CAD/CAM and information services while GM spends twice that much or about 1½ percent of its sales dollar.

Before Chrysler expands the CAD/CAM systems to do something new, it looks for a productivity gain of at least four to one, but it has been experiencing gains of as much as 40 and 50 to one, Sinclair said.

The current systems in design have already shown a 30 to one productivity increase when compared with those used in 1969 and 1970, Brauburger said.

Chrysler soon will be using 3-D holographs to replace clay models. It takes two man-months to produce each clay model and using the 3-D holographs can save two man-months per clay model, Sinclair told the analysts.

Chrysler is also using a Predictive Design process which provides crash-testing data without actually crashing the cars, he said.

Chrysler is showing a 15 percent productivity increase in design, according to Thompson.

That will increase as more of the CAD systems are linked. Powertains are still not part of the circle but will be as new engines are introduced.

The corporate CAD systems are also linked directly to the plants in some areas. A transmission case was designed on a computer and then machined without ever leaving the computer system, Brauburger said.

While Chrysler makes strides in its manufacturing capabilities through computization, so does its financial arm.

Chrysler Financial Corp. plans to diversify just as General Motors Acceptance Corp. plans to diversify.

Chrysler Financial has upgrading its in-house data processing so more functions are computerized. Productivity at Chrysler Financial improved 16 percent: at GMAC, it has improved at a 3-percent annual rate.

Chrysler Financial is looking at diversification into other financial services which can be offered through its existing organization. It reportedly has considered the credit card business.

"Each company is at a different phase of its maturity," said E.O. Grote, president of Chrysler Financial. "And so what is right for one company may not be right for another company at a given point in time.

"But I think you will see the captive companies broaden the scope of services they offer to the consumer, without being specific at this time what that might be."

Chrysler is moving ahead on its own to integrate its systems and feels it has a jump on the rest of the industry without spending megabucks. It has taken a "rifle shot instead of a shotgun approach" to the linkup, Thompson said.

"Throwing megabucks at something may or may not solve all the problems," Quint said. "It certainly may not do it the most efficent way. I think our approach is to direct our efforts where we think the payoff is the biggest."

Prechter realigns firm's structure, promotes two

SOUTHGATE, Mich.—Heinz C. Prechter, chairman and president of ASC, Inc., has announced a realignment within the company's structure.

The changes include two executive appointments and the realignment of several activities.

Larry V. Moore, a 20-year veteran of Ford Motor Co., has been appointed to the new position of executive vice president and chief operating officer. Reporting directly to Moore are the general managers of ASC's American Sunroof Co., Automobile Specialty Co. and Engineering and Technical Center.

Two other areas of the company that have been realigned under the executive vice president include Business and Product Strategy and Program Management.

Donald J. Old has been appointed vice president and general manager of ASC's American Sunroof Co. Old, formerly general manager of the firm, joined the ASC organization in 1983.

Within American Sunroof Co., Prechter reported a restructuring of the Sunroof Systems Divison to include the Sunroof Engineering and Sales and Technical Services groups. In addition, ASC's Worldwide Operations have been placed under the company's Design and Marketing Center activity.

Dealer total—U.S. and import—steady for year

The number of new-car dealerships in the U.S.—domestic and import combined—held steady in 1984.

The Automotive News census found 24,724 outlets in operation on Jan. 1 of this year, three more than the 24,721 counted at the beginning of 1984.

The 1985 total consists of 20,902 establishments handling domestic cars and 3,822 handling only imported cars.

The overall import dealership total is 12,427, but 8,605 of them are domestic-import duals, so they are included in the domestic count.

On Jan. 1, 1984, the 24,721 dealerships consisted of 20,841 that handled domestic cars and 3,880 that handled only imports.

The overall import figure at that time was 10,096, including 6,216 that carried both domestic and imported cars.

Thus, the domestic total rose 61 for the year and the import-only number was down 58, resulting in a net gain of three outlets for the industry.

IMPORTED-CAR RETAIL OUTLETS

	Jan. 1, 1985		Jan. 1, 1984	
Imported-cars only:				
Exclusives	2,833		2,750	
Duals	989		1,130	
		3,822		3,880
Import-domestic duals:				
Domestics with captive imports	6,065		3,864	
Domestics with other imports	2,540		2,352	
		8,605		6,216
Total imported-car dealers		12,427		10,096

Notes: Renault and Volkswagen are counted as domestics. Captive imports are Chevrolet Sprint and Spectrum; Dodge Colt, Conquest and Vista; Plymouth Colt, Conquest and Vista.

Import outlets total 12,427; Chevy captives boost count

Continued from Page 1

Import exclusives rose last year. There were 2,833 of them on Jan. 1, 1985, up from 2,750 at the beginning of 1984. Honda set the pace with an increase of 88 solo spots. Nissan, down 36, showed the biggest decline.

As might be expected, the Japanese account for the bulk of the exclusives—2,309 of the 2,833. The leaders are Toyota, 661; Nissan, 605; Honda, 532; Subaru, 302, and Mazda, 106. The only other makes with more than 100 one-liners are Volvo, 122; BMW, 116, and Mercedes-Benz, 106.

While the number of exclusives rose, the number of import-only duals dipped last year. There were 989 as 1985 began, down from 1,130 a year earlier. So the number of outlets handling only imported cars slipped to 3,822 from 3,880.

The other main class of import outlets is the import-domestic duals. Again, there are two subgroups—domestic duals with captive imports and domestic duals with other (independent) imports.

The increase in captive duals was noted earlier. Domestic duals with independent imports also went up in 1984, rising to 2,540 from 2,352. The number of domestic-car dealerships handling an import was 8,605 on Jan. 1, up from 6,216 as 1984 began.

The import franchise total showed a substantial gain last year, rising to 16,191 from 13,707 at the beginning of 1984. It was an increase of 2,484 selling agreements, or 18 percent.

The franchise total is always higher than the dealership figure: Because of dualing, every franchise does not constitute a separate dealership.

Fifteen makes were up for the year, and eight were down. Two were unchanged, and there are three newcomers—Chevrolet Sprint and Spectrum joined the fold in 1984, and Lamborghini appears in the annual census for the first time last July. Their totals have risen since then.

The Top Ten in import franchise totals on Jan. 1 were: Plymouth, 2,980; Dodge, 2,893; Spectrum, 1,561; Nissan, 1,106; Toyota, 1,091; Honda, 850; Subaru, 810; Mazda, 760; Sprint, 516, and BMW, 419.

The biggest franchise gains were by the Dodge and Plymouth captives, up 149 each. This was higher than the *dealership* upturn of 124 for the Chrysler Corp. imports because of dualing between Dodge and Plymouth.

Also adding franchises for the year were Honda, 28; Maserati, 20; TVR, 18; Lotus, 15; Alfa Romeo, 15; Subaru, 12; Toyota, 10; Saab, 9; BMW, 5; Nissan, 5; Mazda, 3; Ferrari, 2, and Mercedes-Benz, 1.

Reporting fewer dealers this year than last were Jaguar, down 17; Peugeot, 14; Audi, 5; Mitsubishi, 2; Isuzu, 2; Porsche, 2; Rolls-Royce, 2, and Volvo, 1. Aston Martin was unchanged, as was the estimate for Bertone/Pininfarina.

Franchise totals were a record high for 11 makes.

The record setters were Dodge, Plymouth, Honda, Subaru, Mercedes-Benz, BMW, Ferrari, Maserati, TVR, Sprint and Lamborghini. Sprint and Lamborghini appeared in the census for the first time last July. Their totals have risen since then.

Year's total is 1,829,584

Car production rises to 177,239

By Louise Kertesz
Detroit Reporter

Domestic auto makers slated production of 177,239 units last week, 2.50 percent more than the previous week's 172,911 but 2.21 percent less than the year-ago week's 181,252.

So far this year, 1,829,584 cars have been assembled, about the same (up 0.75 percent) as the 1,816,008 completed last year at this time.

Last week's scheduled output was shared as follows: General Motors, 61.10 percent; Ford Motor Co. 17.83 percent; Chrysler Corp., 17.78 percent; American Honda, 2.13 percent; Volkswagen of America, 1.13 percent, and New United Motor Mfg., Inc., 0.03 percent.

Honda's Marysville (O.) facility lost five hours of production during the week ended March 9 because of equipment malfunction. Output for the week fell some 250 units short of the targeted 3,800.

Ford's Wayne (Mich.) plant was down last week for one week for conversion to 1985½-model Escort and Lynx production.

Ford's Atlanta plant will be down this week (March 18) for one week to move production of the Ford Thunderbird and Mercury Cougar to Lorain, O.

The Atlanta facility will concentrate on production of the Ford LTD and Mercury Marquis and continue to prepare for the launch of the new Ford Taurus and Mercury Sable in the fall.

Thunderbird and Cougar are already being built in Lorain.

GM scheduled two overtime shifts Saturday (March 16) at its plants in Lansing (Oldsmobile No. 1 and 2); Arlington, Tex.; Doraville, Ga.; Framingham, Mass.; Lakewood, Ga.; Leeds, Mo.; Oklahoma City, and Orion Township, Mich.

Ford also scheduled Saturday overtime at its plants in Dearborn and Edison, N.J.

Daily overtime is scheduled this week at Ford plants in Chicago; Lorain; Dearborn; Wixom, Mich.; Edison, N.J., and Kansas City.

Chrysler scheduled two overtime shifts Saturday at its plants in St. Louis (No. 2), Jefferson (Detroit), and Newark, N.J.

Chrysler's St. Louis, Newark and Belvidere (Ill.) facilities are scheduled to operate two nine-hour daily shifts this week.

The Jefferson plant is scheduled to work two 8½-hour daily shifts this week.

Motor Iberica builds, sells Nissan Vanette in Spain

By Francis J. Gawronski
Tokyo Bureau Chief

TOKYO.—Nissan Motor Co., Ltd., announced that Motor Iberica S.A., Spain's largest commercial-vehicle manufacturer, which is largely financed by the Japanese auto maker, has begun making and selling the cab-over Nissan Vanette.

The Vanette, according to Nissan, is targeted at the new market between passenger-car-derived vans and light commercial vans in the commercial-vehicle market. It joins the Nissan Patrol, which has been in production at Motor Iberica, located in Barcelona, since January, 1983.

The Vanette will be offered in two types of a blind panel-van and combination passenger utility van, with two engine choices—a 1,500-cc gasoline engine and a 2,000-cc diesel engine.

Nissan said exports of the Vanette to several European countries, including the U.K., France and Italy, are scheduled for this summer.

The Vanette went into production at Motor Iberica's Zona Franca plant in Barcelona in January, 1985. Plans call for an initial production volume of 6,400 units for 1985 and 15,000 units per year after production reaches full capacity, Nissan said.

Nissan first invested in Motor Iberica in January, 1980, and acquired majority-stockholder status in April, 1982. The company began producing the four-wheel-drive Patrol in January, 1983, and currently exports the vehicle to France and Italy.

Since it made its initial investment, Nissan said, Motor Iberica's plant facilities have been modernized and rationalized to strengthen overall operations, and Nissan technology as well as parts and components have been introduced to upgrade existing products.

With the introduction of the Vanette, Nissan said, Motor Iberica has expanded its export vehicle lineup and reinforced its position in the European commercial-vehicle market.

Nissan said it will continue to strengthen the Spanish company's corporate structure and competitiveness to foster continued growth as Nissan's primary commercial vehicle production base in Europe. Motor Iberica had approximately 130 dealer outlets as of the end of 1984.

New Chevy-Olds dealer

WILLARD, O.—Raymond P. Bouman has taken over the Chevrolet-Oldsmobile dealership here.

Truck production for week is best since June of '79

If domestic makers met their production target last week, they built more trucks than in any week in almost six years.

Scheduled output of 70,485 trucks last week was the highest weekly production since the week ended June 30, 1979, when 71,637 trucks were built.

The highest weekly production for 1984 was the 70,166 units for the week ended Nov. 10.

Last week's output was up a bit (1.20 percent) from the previous week's 69,650 and was 10.27 percent higher than the year-ago week's 63,919.

Year-to-date, 711,790 trucks have been assembled, 7.31 percent more than the 663,315 built last year at this point.

Ford Motor Co. has scheduled daily overtime this week (March 18) at its plants in Wayne, Mich. (Michigan Truck); Kansas City; Norfolk; Twin Cities; Lorain, O., and Louisville.

Chrysler Corp. has scheduled two nine-hour daily shifts this week at its Warren (Mich.) plant.

Canada builds 20,653 cars; up 15 pct. for week

Canadian auto makers scheduled production of 20,653 units last week, 15.17 percent more than the 17,932 completed the week before, when output at General Motors and Ford Motor Co. plants fell short of target and American Motors' Brampton (Ont.) facility was down for inventory adjustment.

The previous week's output was the lowest in six weeks.

Last week's production was 10.68 percent less than the 23,123 cars completed in the year-ago week.

So far this year, 210,254 cars have been assembled, 9.81 percent behind the 233,128 finished last year at this point.

Makers targeted production of 18,708 trucks last week, 9.89 percent more than the previous week's 17,025 and 3.29 percent better than the year-ago week's 18,112.

Year-to-date, 190,319 trucks have been built, 13.70 percent more than the 167,382 completed last year at this time.

Chrysler Corp.'s Windsor (Ont.) plant scheduled assembly of 2,754 Plymouth Voyagers, 2,748 Dodge Caravans and 606 Mini Ram Vans, bringing the T-115 total for the year to 61,147.

For the U.S. in 1986

Scorpio by Ford of Europe

Ford of Europe's new Scorpio will be offered by U.S. Merkur dealers in spring, 1986. In Europe, the Scorpio will replace the Granada and will go on sale in mid-May. Length is 183.8 inches; wheelbase, 108.7 inches, and curb weights are in the 2,700-to-2,950-pound range. Story, other pictures on Page 8.

Sales per outlet climb; Japanese win top 4 spots

By Jenny L. King
Detroit Reporter

Galloping new-car sales combined with a stable dealer population resulted in increased sales per new-car outlet in 1984, the annual Automotive News analysis shows.

Total industry retail deliveries in 1984 were up 13 percent from the 1983 level. The number of new-car outlets was up less than 50 the first half of 1984, then dropped back by year's end to the level of a year earlier.

As was the case for 1983, four Japanese makes occupied the top spots on the sales-per-outlet chart for 1984, and Oldsmobile, in fifth place, continued to have the highest number of sales per outlet of the domestic makes.

Oldsmobile led a cluster of four domestics—including Buick, Chevrolet and Ford— which were followed by a scattering of imports and domestics in the sales-per-outlet lineup.

First, the big picture. The overall average of sales per outlet was 420 in 1984. A year earlier, the average was 374.

The average per import outlet in 1984 was 222, down from 235 in 1983. Two years earlier, the average was 200 sales per outlet.

Domestic outlets averaged 380 sales apiece, up from 330 in 1983 and up from 277 in 1982.

Honda not only took over first place from Toyota in the sales-by-make ranking, it beat the biggest Japanese import with room to spare. Honda dealers averaged a record 610 sales per outlet in 1984 compared with 515 per Toyota outlet. The former record was 541 by Toyota in 1980.

Mitsubishi, which maintains a low dealer total to balance its comparatively small sales, edged Nissan out of third place and notched a record for itself with a 477 average. Nissan, at 439 sales per outlet, was down from its record of 479 notched just a year earlier.

Other record-setters included Oldsmobile at 331, Buick at 318, Volvo at 246, Mercury at 195 (tying its 1978 record), Mercedes-Benz at 190 and Audi at 172.

Also setting records were BMW at 170, Renault at 135 (tying 1983), Chrysler at 110, Saab at 102, Jaguar at 98 and Peugeot at 64.

Volvo moved from 10th to ninth last year; Pontiac ascended to 10th, and Mazda fell to 11th.

Noticeable moves, both up and down, affected some makes. Audi graduated to 16th place from 20th in 1983. Chrysler climbed to 20th from 23rd place. Isuzu dropped to 25th from 22nd.

The Cadillac nameplate, which includes Fleetwood and DeVille models, had the highest domestic sales-per-dealer average with 121 in 1984. Second best was Oldsmobile Cutlass Supreme at 95 sales per outlet, followed by VW Rabbit/Golf at 82, Oldsmobile 88 at 81 and Oldsmobile Cutlass Ciera at 76.

Ford's subcompact Escort was sixth with a 75-per-outlet average in 1984, and Renault Alliance and Buick Century shared seventh place at 74. Chevrolet Cavalier was next with 73, followed by Chevrolet Celebrity at 63 and Buick Regal at 62.

Cadillac earned top nameplate status in 1983 as well with 111 sales per dealer. Olds Cutlass Supreme was second at 105, followed by Renault Alliance at 95, VW Rabbit at 93 and Buick Regal at 80.

Olds 88 was sixth that year with its average of 72 per outlet. Ford Escort was seventh at 71; Olds Cutlass Ciera was eighth at 61; Plymouth was ninth at 59, and Buick Century was 10th at 51.

Best sales-per-outlet nameplate for each of the domestic makes was determined, logically enough, by the best seller. At General Motors, Oldsmobile Cutlass Supreme had the top average per dealer (95). For Buick, Century was high at 74 per outlet. Chevrolet's best was Cavalier, 73; Cadillac's highest was Cadillac at 121, and Pontiac's Sunbird was best at 42 sales per dealer.

Ford's Escort was high for that division with a 75-per-dealer average. Lincoln was best for Lincoln at 58, and Mercury dealers sold more Grand Marquis models —54—than any other Mercury nameplate.

For Chrysler, LeBaron was high at 34 per dealer. Plymouth's strongest again was Reliant at 48 per outlet, and Dodge dealers did best with Aries, 39, in 1984.

VW's Rabbit/Golf claimed first place with the highest average per outlet of all subcompacts. A year

New race in minivans shapes up as makers enter 2nd generation

By Dan McCosh
Detroit Reporter

A second-generation minivan race already is in the making, even as Ford Motor Co., General Motors and Chrysler Corp. are scrambling for position with new entries in this still-untested new market.

Pontiac reportedly is within weeks of getting corporate approval of a proposed front-drive van-like vehicle, aimed at the 1988-89 time frame.

Chrysler Corp. is much farther along on a radically new "mini-mini" Z-van, some 18 inches shorter than its current minivan, while Ford likewise reportedly is considering a front-drive passenger-oriented van-like vehicle due in 1988, likely to be imported from Japan.

The second-generation minivans further muddle the distinction between a truck-based van and a traditional passenger car, with some considered passenger-car rather than truck programs.

They also show signs of being the next yuppie trend, even displacing the current enthusiasm for performance cars, say some product planners who are studying the phenomenon. This is based partially on initial acceptance of Chrysler's current minivan by former buyers of two-door cars and the low average age of the minivan buyers—about 35 years old.

The new vans mainly imitate Chrysler's lead in emphasizing front-wheel drive, although some four-wheel-drive derivatives are also in the works.

Both Ford and GM opted for rear-drive in their original minivans, the GM Astro/Safari and the Ford Aerostar, on the theory that rear-drive works better in load-carrying and commercial applications.

However, Ford already has revised its marketing emphasis to favor the passenger-car market and now anticipates that more than half of Aerostar sales will be for people-carrying. GM, likewise, is predicting that some 60 percent of its minivan sales will go to the passenger-car field.

China to build Peugeot wagons, pickups

PARIS.—China is to build Peugeot 504 pickups and station wagons following an agreement signed in the country late last week by Automobiles Peugeot President Jean Boillot. The first stage of the $58-million deal will mean 15,000 units per year by 1989. Two further stages could take output to 50,000 annually. The factory, currently producing trucks and buses, is at Huang Pu, Guangzhou.

190,000 Nissans recalled in Japan

TOKYO.—Nissan Motor Co. has informed the Ministry of Transport here that it will recall approximately 190,000 March, Cedric and Gloria models and four other models sold in Japan which have defective headlight switches. This is said to be the biggest recall of cars on the road in Japan in the past few years. Nissan said about 66,000 cars with the same defective headlight switches were exported and the company would take corrective measures in accordance with the laws of the countries involved. The recall is expected to cost Nissan approximately $2.5 million.

To help Chevy against Japanese, Pontiac against Europeans

CPC looking at new ventures

By Marjorie Sorge
Labor Editor

The Chevrolet-Pontiac-General Motors of Canada supergroup is looking at two more "surprise" joint ventures to grab more of the under-35-year-old market, said Lloyd E. Reuss, group vice president.

He would not comment on what the new ventures might be. But it is likely they would be relationships that would either give Chevrolet more product to compete with the Japanese or give Pontiac more product to compete with the Europeans or in some way enhance the CPC image.

Other stories on Page 3

When asked if CPC might create another company to build cars to compete with the Europeans, Reuss told Automotive News, "Who knows? It might not be a bad idea."

Within the next five years, CPC will be redoing or replacing about 10 of its 15 assembly plants to prepare for the new products and technologies, Reuss said.

CPC is targeting the under-35-year-old and entry-level markets for higher penetration. Those are the areas of the heaviest European and Japanese penetration.

According to Reuss, Chevrolet should get 30 to 35 percent of those markets before 1988. It cur-

Buys Philadelphia's Colonial Group

GMAC expands stake in mortgage business

By Michelle Krebs
Financial Editor

General Motors made another advance in diversifing its financial services business with the purchase of a Philadelphia-based mortgage company.

The purchase could make the No. 1 auto maker the No. 2 mortgage company in the country.

GM's financing subsidiary, General Motors Acceptance Corp., announced it had reached a preliminary agreement for the purchase of the Colonial group of CoreStates Financial Corp.

Colonial, a group of seven mortgage banking and servicing companies, has 60 offices in 49 states with a $7.4 billion mortgage portfolio.

The terms of the deal were not disclosed, and final agreement is subject to corporate approval on both sides.

A week earlier, GMAC announced it had reached a preliminary agreement to purchase the rights to service the $11 billion mortgage portfolio of Norwest Corp. in Minneapolis.

GMAC services the mortgages by collecting payments, managing tax and insurance escrow accounts, handling foreclosures and delinquencies and then remitting the funds to Norwest. In return, GMAC collects a fee.

The mortgage financing subsidiary of Norwest generates mortgages through its 52 loan production offices in 23 states and retains the right to package groups of mortgages and sell them to investors as securities in the secondary market.

GM, however, has an option to purchase the loan production offices at a later date.

Under the arrangement with CoreStates, GMAC has purchased the entire mortgage business including origination of mortgages.

CoreStates, called Philadelphia National Group until 1983, has the reputation of being a very well-run bank, said banking analyst Jeff Cohen, of Drexel Burnham Lambert.

It receives high grades in nearly every category used by bank watchers, including a clear idea of its direction. Its goal has been to emphasize business in Eastern Pennsylvania and the Mid-Atlantic states.

The mortgage business represented a minor part of CoreStates' overall business and was not necessarily consistent with its corporate strategy, Cohen said. He added that GM's offer probably was a favorable one for CoreStates.

Norwest was in a situation in which it was forced to do something about its mortgage business,

Meet the Challenge

Franco Sbarro's Challenge appeared at the Geneva International Motor Show. The wedge-shaped and rounded two-seater has four-wheel drive and is powered by either a Mercedes-Benz or Porsche V-8—each with twin turbos. Sbarro said he will produce 10 examples at prices from $62,000.

Ford SVO eyes T-bird, all-new car

By Richard Johnson
Detroit Reporter

An SVO Thunderbird is one of "two or three" projects Ford Motor Co.'s Special Vehicle Operations has ready to go once a green light is received from corporate management, according to SVO director Michael Kranefuss.

He said an all-new sports car is also under consideration.

SVO, Ford's 32-man motor sport, performance parts and specialty car operation, is apparently nearing decision day on upcoming production-car plans.

Special Vehicle Operations was established in 1980 and three years later introduced the high-tech, turbocharged SVO Mustang. Later this spring, Ford will launch its 1985½ SVO Mustang, with a boost in horsepower, aero headlamps, a sleek new front end and other refinements.

But the focus now is on the next production-car effort at Special Vehicle Operations. Talk has centered on the Thunderbird adaptation, and the concept of a complete SVO car.

Kranefuss confirmed that an SVO makeover of Thunderbird is one of the projects ready to run. He also said a basic plan for performance spinoffs of all Ford front-wheel-drive models has been prepared.

"We have a pretty much defined plan on a performance version of any front-wheel-drives we have now and any we have coming," he said.

An all-new SVO vehicle looms as a possibility. Ford's new president, Harold A. Poling, reportedly has said he would like to see Kranefuss' operation attempt a new car from the ground up.

"That would require a totally new philosophy," Kranefuss said. "You would have to go through a totally new learning process, in terms of . . . are we allocating work to a design engineering outfit, to a manufacturing outfit and then communicating, or are we going to be actively involved?"

An SVO insider said the special operation has concentrated on prospects for an all-new vehicle in recent weeks. Another company source said last week that SVO would probably be closely involved in a two-seat, mid-engine prestige sports car project that Ford is known to be considering.

However, Kranefuss would not say whether SVO currently has a "ground-up" project in the works.

"We have a couple of ideas and all of those ideas were accepted and well-received," he said.

250,216 cars in inventory on March 1

Import supply falls to 31 days

By Arthur Flax
Automotive News Staff

Stocks of new imported cars slipped during February as Japanese makers neared the end of the last voluntary restraint period on March 31.

Imported cars in dealer inventory and port stocks fell to 250,216 on March 1, a 31-day supply, down from 262,990 units, representing 33 days a month earlier. A 60-day supply is considered ideal.

A year ago, there were 207,683 new imported cars in stock, a 29-day supply.

The supply of new imported pickup trucks also fell substantially, to 87,383 units on March 1, a 30-day supply. This was down from 101,619 units, a 37-day total on Feb. 1. On March 1 last year, there were 62,893 imported trucks in stock, a 34-day supply.

Of note was the drop in Isuzu truck stocks, from 164 days on Feb. 1 to 64 days on March 1. Isuzu is conducting a truck dealer incentive program.

March opened with a combined imported car and truck inventory of 337,599 units, a 30-day supply. On Feb. 1, the combined supply tallied 364,609 units, a 34-day supply, and a year-earlier on March 1, there were 270,576 cars and trucks in stock, a 30-day supply.

On March 1, the Japanese makes accounted for 52.97 percent of all import cars in stock; German cars, 34.75 percent, and cars from other European countries, 12.28 percent.

One month earlier, the shares were Japanese, 59.28 percent; German, 29.23 percent, and other countries, 11.49 percent.

Japanese car sales rates remained stable from Feb. 1 to March 1, but shipments fell off almost 15 percent from the month-earlier total, causing a drop in the days-supply from 25 to 21.

The days-supply for Japanese cars by make were: Subaru, 8; Toyota, 10; Honda, 12; Mazda, 21; Mitsubishi, 24; Isuzu, 28 and Nissan, 31.

In addition, the Mitsubishi-built imports marketed by Chrysler Corp. averaged a 54-day supply: Dodge Colt, 47; Plymouth Colt, 52; Plymouth Vista, 54; Dodge Vista, 57; Dodge Conquest, 113, and Plymouth Conquest, 117.

One month earlier, Chrysler imports averaged 60 days' supply.

Chevrolet's captive imports averaged an 82-day supply, down from the month-earlier 108 days. On March 1, there was a 32-day supply for the Suzuki-built Sprint and a 103-day supply for the Isuzu-built Spectrum.

German makes had a 77-day supply, up from 70 the previous month. Inventories increased some 13 percent, while the sales rate remained stable.

By make, the supplies were: Mercury Merkur, 38 days; Mercedes-Benz, 39; Porsche, 43; BMW, an estimated 65 days; Volkswagen imports, 95, and Audi, 124.

Brazil to power cars with oranges

RIO DE JANEIRO.—Brazil plans to open its first plant in June for distilling industrial alcohol from oranges for use as motor fuel.

The Sao Paulo plant will distill the fuel from sugar residue in orange-based animal feed. Brazil already distills alcohol from more than half of its sugar crop for use as motor fuel.

Dealer shop volume up 9 pct for month

Service and parts volume in the nation's franchised new-vehicle dealerships was up almost 9 percent in the first month of 1985, with increases in all indicators in the Automotive News Service Index.

SERVICE INDEX 108.8★

	Jan., '84 vs. Jan., '83
Gross Profit on All Labor and P&A Sales	+ 8.5%
Repair Orders Written	+ 5.2%
Total Labor Sales (Customer & Warranty)	+15.2%
Shop Parts Sales (Customer & Warranty)	+12.6%
Sales of All Parts and P&A	+ 6.7%

★—Survey by Automotive News shows that dealer's service and parts business in January, 1985, was 108.8 percent of business in January, 1984.

During the month, dealers' shop business was 8.8 percent higher than the same month a year ago.

The biggest gains were achieved in total labor sales (customer-paid and warranty) and sales of shop parts, those used on customer-paid and warranty repairs.

Labor sales in January were up 15.2 percent over the first month of 1984, while shop-parts volume showed a gain of 12.6 percent.

January gross profit on all labor, parts and accessory sales—the key indicator in the dealer's viewpoint—was 8.5 percent higher than a year ago, while sales of all parts and accessories were up 6.7 percent.

The number of repair orders written during the month, customer-paid and warranty, was 5.2 percent higher than those recorded in January, 1984.

Service Index figures are compiled from monthly reports from dealers in all areas of the nation.

New policy aimed at boosting investment in its own family

GM dealers can own more outlets

Marjorie Sorge
Labor Editor

A General Motors dealer can now be the owner-operator in up to five GM dealerships and have up to a 49 percent ownership in as many as 10 under GM's dealer investor policy.

The investor may own up to three GM and non-GM dealerships in a multiple dealer area and only one in the same GM Area of Geographic Sales and Service Advantage (AGSSA).

An AGSSA is an area where potential customers would normally shop. It takes into consideration the natural boundaries, shopping habits of the buyers, marketing abilities plus other criteria. It is separated so no one dealer can have an unfair marketing advantage.

The current dealer agreement expires Nov. 1 and there will be "no significant changes" in that contract, said Donald W. Hudler, general director, GM sales operations.

Details of the new multiple dealer investor policy were sent to dealers early this month. It revises the existing plan. Previously, dealers were allowed to hold one franchise and have as much as 49-percent interest in nine others, both GM and non-GM. Non-GM franchises are no longer counted in the total and are not affected by the change in policy.

GM is hopeful the change will encourage GM dealers to invest in more GM deals than import deals, Hudler said.

"Currently, the dealers seemed to be going the other way, toward

One profit center, 3 marketing units

How CPC Group is organized

By Marjorie Sorge
Labor Editor

The organization of the Chevrolet-Pontiac-General Motors of Canada Group is aimed at one thing—picking up the pieces of GM's falling market in the under-35-year-old class and putting them together.

To do that, CPC has been organized into one profit center surrounded by three marketing and distribution divisions—Chevrolet, Pontiac and GM of Canada, said Lloyd E. Reuss, group vice president.

"We have one profit center in CPC," he said. "We have an integrated engineering organization, an integrated purchasing organization, an integrated financial organization.

"We look at ourselves as suppliers through these three distribution outlets—Chevrolet, Pontiac and GM of Canada. They are the marketing and distribution divisions in our organization. Saturn is another company."

GM of Canada and Saturn are handled a little differently because they are separate companies. But, Reuss said, they maintain a very strong tie with the CPC organization.

One of the reasons for this type of organizational form is that CPC is spread out geographically and some of the CPC groups were already decentralized. For example, Chevrolet was very decentralized with plants all over the U.S.

The Buick-Oldsmobile-Cadillac Group is more centralized and has developed an entirely different program with four profit centers, three based on car platforms and one on powertrains. Each group is responsible for turning a profit.

The CPC organization will also make more use of contract personnel, people hired for only one project, Reuss said.

"We have a tremendous number of contract people who work through these product cycle programs," he said.

"We are looking for new and different approaches to use with our suppliers and to see how we can set up different ways of operating in different parts of the country where teams can be working on different projects, whether it is a new plant or part of a new model design."

The CPC Group is very flat, with few layers of management. For example, finance went from about 10 layers to about six. The goal, Reuss said, is to make things happen more quickly.

"Ten years ago, we would never have been able to do this," Reuss said. "The theory was if it is good for one group, it is good for the other. Now, we have a very flat organization.

"Our span of control for the top echelon at CPC is up about 40 percent. I have 15 people who report directly to me. In the old days with the general manager concept, I might have had nine or so."

Those reporting to Reuss directly include the heads of Saturn, Chevrolet, Pontiac and GM of Canada. There are also group directors of strategic planning, engineering, quality, operations, finance, personnel and public affairs.

The program managers also report directly to Reuss. The current program managers are for the F-body/GM80 project, the W-body/GM10 project and the L-body/GM25 project.

According to Reuss, there will be a program manager for each new product.

Platform managers will be in charge of the products already on the market, and some of those products are combined under one manager's responsibility. The platform managers report to the group director of engineering, Robert J. Schultz. Schultz is a GM vice president.

There is also a program manager for organization.

In some areas CPC is a matrix oganization, Reuss said.

At BOC, the business units are headed by product team managers who report directly to Robert C.Stempel, group vice president.

At CPC, the joint ventures with Isuzu, Suzuki and Daewoo; New United Motor Mfg., Inc., and the relationship with Electronic Data Systems fall under the strategic planning group. George Peapples,

Seeking entry-level buyers with Isuzu, Suzuki, Daewoo cars

CPC import plan is long-range

By Marjorie Sorge
Labor Editor

The Chevrolet-Pontiac-General Motors of Canada Group is acting as an importer and distributor of small, entry-level cars and will continue to do so in the future, said Lloyd E. Reuss, group vice president.

CPC is importing Isuzus and Suzukis from Japan and plans to import Daewoo models from Korea. Those ventures have no fixed ending and could be terminated at any time.

It is likely that General Motors will continue the relationship as long as the market demands the vehicles. Currently, much of CPC's success in the small-car market hinges on the sale of those imported cars.

The number GM will import will depend on the decision made by Japan's Ministry of International Trade and Industry in Japan since the U.S. will not request renewal of the Voluntary Restraint Agreement.

GM had initially said it would import 200,000 Isuzus and 84,000 Suzukis, but the VRA prohibited the importation of that many and the Isuzu Spectrum and the Suzuki Sprint have only been sold on the two Coasts.

Nova, the GM-Toyota car from New United Motor Mfg., Inc., and the new Satun Corp. offering also will play a big role in CPC's future marketing and maufacturing strategies.

The addition of Saturn to the CPC Group brought up the question of changing the name to include that new company. Reuss said there may be some changes down the road, but for the time being it will remain CPC.

The reason CPC is importing or will import the Isuzu, Suzuki and Daewoo cars is that it cannot build a small car cost effectively in the U.S. today. Consequently, the supergroup feels the best way to appeal to the market is to import those vehicles. In some cases, CPC is using the Japanese to compete against the Japanese.

"Our objective is to build as much as we can in this country," Reuss said. "In order to become really competitive, we have to build cars in this country. We are also pragmatic enough to see we aren't there in some of those small vehicles and that is why we have the joint ventures."

Finding a way to build a small car cost effectively in the U.S. is the mission of CPC and will culminate in the Saturn project.

"Saturn is the focal point and has to play a very important part in our long-term success," Reuss said. "Look at the Saturn mission statement—moving the techniques and technology into other parts of the organization."

Some of the new CPC products like the GM10 and the GM25 have lists of things that have come out of Saturn ideas. The GM10 in CPC is a 1988 mid-size replacement for the Pontiac 6000 and the Grand Prix. The GM25 is a 1987 model which is exclusive to Chevrolet and will replace the X-car.

There will be plants coming on stream, either new or redone, in 1987 that will have the Saturn technology, and Saturn in turn will learn from those plants.

The mission is to share technology and ideas during the development of the Saturn project—the manufacturing and the car.

"Bill Hoglund's (president of Saturn Corp.) office is right above mine," Reuss said. "They are a part of CPC so ideas and technologies are not something somebody is going to drop in. They are rubbing elbows on a day-to-day basis."

Saturn will be supplying the information to "Saturnize" the rest of the corporation, he said.

"We have to have some hard data showing that these are the things we are doing, this is where we are going, and this is how successful we are," he said. "We have a scorecard for part of it. You don't hear a lot about it in the press, but it is an equally important part of Saturn's mission and they are setting up their own benchmarks and milestones.

Before Saturn comes to market or becomes an actual plant, many people will work on the operation. CPC will be moving people in and out of the project and it has already begun to do so. One of the orignal members of the NUMMI group has now been transferred to Saturn and is involved in site selection.

"We will be moving people in and out of Saturn," Reuss said. "One of the best ways to transfer technology is to transfer people."

CPC will also try to cut costs on small-car projects by getting the suppliers involved much earlier in the design and development. Prototypes for the GM10 project, which will be produced in the next few months, will come from suppliers who will be suppliers to the finished operation in 1988.

"The object is to get the suppliers working with our design engineers and procedures and products simultaneously," Reuss said. "We are doing that with all of these programs—GM25, GM80, GM10."

The GM80 is a 1989 replacement for the Chevrolet Camaro and Pontiac Firebird.

That's the goal for 1990; it was 37 pct. in 1984

GM wants 48 pct. in Canada

By Marjorie Sorge
Labor Editor

General Motors of Canada should be talking 48.8 percent of the total Canadian automotive market by 1990, according to the plans of the Chevrolet-Pontiac-Canada Group.

At the same time, its penetration of the light-truck market should jump from 38.4 percent last year to 43.9 percent in five years.

GM of Canada took 37.7 percent of the Canadian new-car market in 1984.

Like Pontiac and Chevrolet, GM of Canada maintains close ties with the CPC supergroup and has the same objective—to get more of the under-35-year-old market.

And Lloyd Reuss, GM vice president and CPC group executive, wants to make sure CPC realizes that Canada is a separate country. A new flagpole has been installed at CPC headquarters in Warren, Mich., so both countries' flags can be flown.

"One of the reasons GM of Canada is part of our organization is that it has been very competitive over the years in quality and costs," Reuss said."Energy costs are less there, and the difference in the dollar is part of the lower cost. GM of Canada is the closest to the Japanese costs."

• In an interview with Automotive News last year, GM of Canada President John F. Smith Jr. said the labor costs in Canada are $5 to $7 an hour lower than in the U.S., while Japanese costs are $8 to $10 an hour lower.

The potential GM/Suzuki deal to build small cars in Canada would be assigned to GM of Canada for its day-to-day operations, Reuss said. That possible joint venture is still only in the meeting stage, a GM of Canada spokesman said. Discussions began last year.

But it has been reported that the Suzuki deal could add about 170,000 Suzuki cars to North America. A site in the Toronto area has been proposed. (Related story on Page 32).

Asked if GM would create that joint venture like its deal with Toyota, Reuss would not comment. He said the discussions for a relationship are only preliminary. GM and Toyota created a new company to build the Chevrolet Nova, New United Motor Mfg., Inc.

There are no other plans to build small cars in Canada, Reuss said. There is, however, a new $1 billion capital spending plan to modernize the existing operations in Oshawa by 1988.

"It's all part of our GM10 program," Reuss said.

"Oshawa City" will build the new intermediate-size GM10 products.

"We are using the name Oshawa City in-house to demonstrate that the approach is different than our other assembly plants," Reuss said. "We will be using a lot of engines that are built in Canada so it is an integrated approach."

Oshawa is currentlyl building the Chevrolet Celebrity, Pontiac 6000 and Oldsmobile Cutlass Ciera.

In a recent speech to employes at GM of Canada, Reuss said CPC planned to continue a high level of spending on future programs and products in Canada.

Toyota to build training facility

NAGOYA, Japan.—Toyota plans to start construction this spring on a training facility for employes from its overseas plants.

The number of overseas trainees at Toyota's facilities in Japan increased to more than 800 in 1984, compared with 420 trainees in 1983 as the auto maker expanded its overseas operations at New United Motor Mfg., Inc., Fremont, Calif.; Canadian Autoparts Toyota, Inc., of Canada, and DCM, Ltd., of India.
